Dimensions, Weights and Ratings

Dimensions, weights and ratings given in this catalog are approximate and should not be used for construction purposes. Drawings containing exact dimensions are available upon request. All listed product specifications and ratings are subject to change without notice. Photographs are representative of production units.

## Terms and Conditions

All prices and discounts are subject to change without notice. When price changes occur, they are published in Eaton's Price and Availability Digest (PAD). All orders accepted by Eaton's Electrical Sector are subject to the general terms and conditions as set forth in Appendix 1-Eaton Terms \& Conditions.

## Technical and Descriptive Publications

This catalog contains brief technical data for proper selection of products. Further information is available in the form of technical information publications and illustrated brochures. If additional product information is required, contact your local Eaton Products Distributor, call 1-800-525-2000 or visit our website at www.eaton.com.

## Compliance with Nuclear Regulation 10 CFR 21

Eaton products are sold as commercial grade products not intended for application in facilities or activities licensed by the United States Nuclear Regulatory Commission for atomic purposes, under 10 CFR 21. Further certification will be required for use of these products in a safety-related application in any nuclear facility licensed by the U.S. Nuclear Regulatory Commission.

## WARNING

The installation and use of Eaton products should be in accordance with the provisions of the U.S. National Electrical Code ${ }^{\circledR}$ and/or other local codes or industry standards that are pertinent to the particular end use. Installation or use not in accordance with these codes and standards could be hazardous to personnel and/or equipment.

[^0]Powering Business Worldwide

## Eaton is a global leader in power distribution, power quality, control and automation, and monitoring products.

At Eaton, we believe a reliable, efficient and safe power system is the foundation of every successful enterprise. Through innovative technologies, cutting-edge products and our highly skilled services team, we empower businesses around the world to achieve a powerful advantage.
In addition, Eaton is committed to creating and maintaining powerful customer relationships built on a foundation of excellence. From the products we manufacture to our dedicated customer service and support, we know what's important to you.

## Solutions

Eaton takes the complexity out of power systems management with a holistic and strategic approach, leveraging our industry-leading technology, solutions and services. We focus on the following three areas in all we do:

- Reliability-maintain the appropriate level of power continuity without disruption or unexpected downtime
- Efficiency-minimize energy usage, operating costs, equipment footprint and environmental impact
- Safety-identify and mitigate electrical hazards to protect what you value most

## Using the Eaton Catalog Library

As we grow, it becomes increasingly difficult to include all products in one or two comprehensive catalogs. Knowing that each user has their specific needs, we have created a library of catalogs for our products that when complete, will contain 15 volumes. Since the volumes will continuously be a work in progress and updated, each volume will stand alone. Refer to our volume directory, MZ08100001E, for a quick glance of where to look for the products you need. The 15 volumes include:

- Volume 1-Residential and Light Commercial (CA08100002E)
- Volume 2-Commercial Distribution (CA08100003E)
- Volume 3—Power Distribution and Control Assemblies (CA08100004E)
- Volume 4-Circuit Protection (CA08100005E)
- Volume 5-Motor Control and Protection (CA08100006E)
- Volume 6-Solid-State Motor Control (CA08100007E)
- Volume 7-Logic Control, Operator Interface and Connectivity Solutions (CA08100008E)
- Volume 8-Sensing Solutions (CA08100010E)
- Volume 9-Original Equipment Manufacturer (CA08100011E)
- Volume 10—Enclosed Control (CA08100012E)
- Volume 11-Vehicle and Commercial Controls (CA08100013E)
- Volume 12-Aftermarket, Renewal Parts and Life Extension Solutions (CA08100014E)
- Volume 13-Counters, Timers and Tachometers (CA08100015E)—Available in electronic format only
- Volume 14-Fuses (CA08100016E)—Available in electronic format only
- Volume 15-Solar Inverters and Electrical Balance of System (CA08100018E)

These volumes are not all-inclusive of every product, but they are meant to be an overview of our product lines. For our full range of product solutions and additional product information, consult Eaton.com/electrical and other catalogs and product guides in our literature library. These references include:

- The Consulting Application Guide (CA08104001E)
- The Eaton Power Quality Product Guide (COR01FYA)

If you don't have the volume that contains the product or information that you are looking for, not to worry. You can access every volume of the catalog library at Eaton.com/electrical in the Literature Library.
By installing our Automatic Tab Updater (ATU), you can be sure you always have the most recent version of each volume and tab.

Icons

Green Leaf
Eaton Green Solutions are products, systems or solutions that represent Eaton benchmarks for environmental performance. The green leaf symbol is our promise that the solution has been reviewed and documented as offering exceptional, industry-leading environmental benefits to customers, consumers and our communities. Though all of Eaton's products and solutions are designed to meet or exceed applicable government standards related to protecting the environment, our products with the Green Leaf designation further provide "exceptional environmental benefit."

Learn Online
When you see the Learn Online icon, go to Eaton.com/electrical and search for the product or training page. There you will find 100-level training courses, podcasts, webcasts or games and puzzles to learn more.

## Drawings Online

When you see the Drawings Online icon, go to Eaton.com/electrical and find the products page. There you will find a tab that includes helpful product drawings and illustrations.

## Contact Us

If you need additional help, you can find contact information under the Customer Care heading of Eaton.com/electrical.

Safety Switches

## Product Overview

## Product Selection Guide

Safety Switch

|  |  |  |  |
| :--- | :--- | :--- | :--- |

## Notes

(1) See specific catalog number page for Fuse Class details. Enclosed rotary switches are non-fusible only.
(2) NEMA Type 12 enclosures $(30-800 A)$ can be field modified to meet NEMA $3 R$ rainproof requirements when a factory provided drain screw is removed.
(3) Class J fuse clips provided.

## 1.1

Switching Devices

## Safety Switches

## Product Description

- Used to open or close a circuit
- Non-fusible safety switches provide a means to manually connect or disconnect the load from the source
- Fusible safety switches provide a means to manually open and close a circuit and overcurrent protection by means of installed fuses
- Also commonly referred to as a disconnect switch or disconnect
- Available from 30 to 1200 A

## Standards and Certifications

- UL® 98
- UL 50
- NEMA KS-1

## Notes

(1) Separate neutral kit required.

Always verify the number of poles and wires required since catalog numbers may appear in multiple tables.

## Notes

(1) Eaton and Siemens switches shown are 600V switches.

Always verify the number of poles and wires required since catalog numbers may appear in multiple tables.

Safety Switches

## Catalog Number Selection

Safety Switch

## Notes

(1) See Pages V2-T1-16 through V2-T1-19 for additional Flex Center options.
(2) Effective August 2003, 30-100A window switches are replaced by a full view window that allows blade position verification and blown fuse indication. See Page V2-T1-39 for catalog numbers.

This table is intended for use in breaking down existing catalog numbers. It is not intended for building new catalog numbers.
A factory-installed ground lug is supplied in all heavy-duty safety switches.

Safety Switches

## Options and Accessories

Safety Switches

| Description | Catalog Number |

## Auxiliary Contact Kits

| All switches (except 30-100A DG) 1NO/1NC | DS200EK1 ${ }^{3}{ }^{3}$ |
| :--- | :--- |
| All switches (except 30-100A DG) 2NO/2NC | DS200EK2 ${ }^{3}$ ) |
| NEMA 7/9 switches (30-100A) 1NO/1NC | 178C265G05 |
| NEMA 7/9 switches (30-100A) 2NO/2NC | 178C265G06 |

## Notes

(1) Ground bar kit is not listed on device publications.
(2) Order one kit per switch.
(3) For duty ratings, see table on following page.
(4) Order one kit for three poles.
(5) Order one kit for each pole.
(6) Receptacle switches.
(7) 30A Class J available as factory option only.
(8) If Class $J$ fuse kit is not listed, then switch will accept Class $J$ fusing by repositioning either fuse base or fuse clips. No drilling required.
(9) Order one kit for six poles.

Accessories are not applicable to NEMA 7/9 switches unless indicated otherwise. A factory-installed ground lug is supplied in all heavy-duty safety switches.

Catalog number DS900AP adapter kit permits Installation of Group 1 hubs on 200A type general-duty, heavy-duty and double-throw switches.

Contact the Flex Center at 1-888-329-9272 or
FlexSwitches@eaton.com for information on hubs for non-metallic NEMA 4X switches.

## Modifications-FIex Center

## Introduction

The Safety Switch Flex Center is a special facility at the site of our Cleveland, Tennessee, plant that is dedicated to providing customized safety switches that meet customer's challenging applications.

Eaton's Flex Center is a solutions center that provides real value:

- A dedicated and knowledgeable engineering/ manufacturing/customer service team to meet your needs
- A production facility stocked with a full arsenal of equipment to get the job done
- The industry's shortest lead-time
- Easy ordering through our distributors

| Description | Suffix | Item |
| :---: | :---: | :---: |
| Nameplates | NP | 1 |
| Fungus proofing | FP | 2 |
| Special paint |  | 3 |
| Lock-on provisions on heavy-duty safety switches for most enclosure types | L0 | 4 |
| Trapped key interlock systems | TK | 5 |
| Upper cover viewing window | W | 6 |
| Lower cover viewing window | LW | 7 |
| Neutral assemblies factory installed for double-throw safety switches | N | 8 |
| Class "R" fuse clips factory installed for heavy-duty switches | 5 or 6 | 9 |
| Class "T" fuse clips factory installed for heavy-duty switches | T | 10 |
| Class "J" fuse clips factory installed for heavy-duty and doublethrow safety switches | J | 11 |
| Fuse pullers factory installed | FE | 12 |
| Special crimp lug pads factory installed for general-duty and heavyduty switches | CK | 13 |
| Copper lugs factory installed | CL | 14 |
| Equipment ground lugs factory installed | G | 15 |
| Custom lug configurations | L | 16 |
| Auxiliary contacts factory installed | 2 or 3 | 17 |
| Control pole factory installed | CP | 18 |
| Switching neutral double-throw | SN | 19 |
| Neutral assemblies factory installed for single-throw non-fusible safety switches | N | 20 |
| How to order |  | 21 |
| How to price |  | 22 |

## 1. Nameplates

Price covers up to three lines of text with a maximum of 25 characters per line. Standard nameplates are laser-engraved plastic and have black letters on a white background. Rotary-engraved phenolic nameplates are also available at a premium. Additional color combinations and larger nameplates are available. Contact the Flex Center for price and availability for these special requirements. Customer must specify the text when placing an order.

Item 1

| Description |
| :--- |
| Plastic nameplate-up to three lines |
| Phenolic nameplate-up to three lines |

## 2. Fungus Proofing

All non-metallic components of the switch are coated with a moisture and fungusresistant varnish. The inhibitor used meets military specification: MIL-V-173C for MOISTURE AND FUNGUSRESISTANT TREATMENT.
The treated switch meets military specification:
MIL-T-152E for MOISTURE
AND FUNGUS-RESISTANT
TREATMENT OF COMMUNICATIONS,
ELECTRONICS AND ASSOCIATED EQUIPMENT. Not UL listed.

Item 2

| Ampere Rating |
| :--- |
| 30 |
| 60 |
| 100 |
| 200 |
| 400 |
| 600 |
| 800 |
| 1200 |

To order, add Suffix FP
to standard safety switch catalog number. Example:
DH363FGKFP.

## 3. Special Paint

Special paint colors are available for order quantities of five or more switches. Colors available are red, orange, yellow, green, black and white. Custom color is applied over the standard ANSI-61 gray finish.
Minimum quantity of five of the same color is required. Order by description. For quantities less than five, higher ampere ratings, or other color request, contact the Safety Switch Flex Center.

Item 3
Ampere Rating

| 30 |
| :--- |
| 60 |
| 100 |
| 200 |
| 400 |
| 600 |

## 4. Lock-On Provisions on Heavy-Duty Safety Switches for Most Enclosure Types

Available on 30-800A heavyduty and double-throw safety switches. Provision will accept a single lock.

To order, add Suffix LO to the standard catalog number. Example: DH362FRKLO.

## 5. Trapped Key Interlock Systems

Available only on heavy-duty and double-throw safety switches. Trapped key systems are used on safety switches to prevent unauthorized operations or to predetermine a series of power transfers by an authorized operator.

Before system construction can begin, the following information must be provided to the Flex Center:

- User-name, address and telephone number
- Complete coordination (lock scheme) required with order

To order, add Suffix TK to the standard catalog number. Example: DH363FWKTK.

## Item 5

| Ampere <br> Rating | Switch <br> Type |
| :--- | :--- |
| $30-1200$ | Heavy-duty |
| $30-800$ | Double-throw |

## 6. Upper Cover

 Viewing WindowUpper viewing window is centered over the switching contacts to provide visual verification of ON/OFF status. Available on most heavy-duty NEMA 4X stainless steel and NEMA $12 / 3$ R and doublethrow enclosures. Not available on non-metallic enclosures. To order, add Suffix W to the standard catalog number.

Note: 30-100A window switches are now provided with a full view cover window for blade verification and blown fuse indication.

## 7. Lower Cover Viewing Window

Lower viewing window is positioned over fuses and provides visual verification of blown fuse indicators for Littelfuse, Inc. TM fuses. Available in 200-600A, twoand three-pole heavy-duty NEMA 4X stainless steel and NEMA 12/3R enclosures. Not available on nonmetallic enclosures. To order, add
Suffix LW to standard catalog number.

Note: 30-100A window switches are now provided with a full view cover window for blade verification and blown fuse indication.

Items 6 and 7
Viewing Window (Upper or Lower) Ampere Rating

| 30-200 |
| :--- |
| Con-800 |
| Contact the Safety Switch |
| Flex Center for lead-time. |

## 8. Neutral Assemblies

 Factory Installed for DoubleThrow Safety SwitchesItem 8

| Ampere <br> Rating | Switch Type <br> Two- and Three-Pole |
| :--- | :--- |
| 30 | Fusible and non-fusible |
| 60 | Fusible and non-fusible |
| 100 | Fusible and non-fusible |
| 200 | Fusible and non-fusible |
| 400 | Non-fusible |
| 600 | Non-fusible |
| 400 | Fusible |
| 600 | Fusible |
| 800 | Non-fusible |

To order, add Suffix $\mathbf{N}$ on non-fusible switches OR replace 6th character F with N on fusible switches. The total price is the standard switch price plus the price adder.
Example 1: DT361URKN non-fusible double-throw, three-pole, 30A switch with factory-installed neutral assembly.

Example 2: DT363NRK fusible double-throw, three-pole, 100A switch with factory-installed neutral assembly.
9. Class "R" Fuse Clips Factory Installed for Heavy-Duty Switches

Item 9

| Ampere <br> Rating | Voltage |
| :--- | :--- |
| 30 | 240 and 600 |
| 60 | 240 and 600 |
| 100 | 240 and 600 |
| 200 | 240 and 600 |
| 400 | 240 and 600 |
| 600 | 240 and 600 |

To order, add Suffix 5 to the standard catalog number for 240 V application.
Add Suffix 6 to standard catalog number for 600 V application. Total price is the standard catalog number price plus the price adder from the table above depending on the number of safety switch poles.

Example: DH324FRK5 heavyduty, three-pole, 200A switch at 240 V with factory-installed Class " $R$ " fuse clips.
10. Class " $T$ " Fuse Clips Factory Installed for Heavy-Duty Switches

Item 10

| Ampere <br> Rating | Voltage |
| :--- | :--- |
| 200 | $\frac{240}{600}$ |
| 400 | $\underline{240}$ |
| 600 | $\underline{600}$ |
| 800 | $\underline{240}$ |
| 1200 | $\frac{240}{600}$ |
|  | 240 |

To order, add Suffix $\mathbf{T}$ to the standard catalog number (catalog number identifies voltage). Total price is the standard catalog number price plus the price adder depending on the number of safety switch poles.

Example: DH364FGKT heavyduty, three-pole, 200A fusible switch at 480V with factoryinstalled Class "T" Fuse Clips.
11. Class "J" Fuse Clips Factory Installed for Heavy-Duty and DoubleThrow Safety Switches

Item 11

| Ampere Rating | Voltage | Switch Type |
| :---: | :---: | :---: |
| 30 | 240 | Heavy-duty and double-throw |
|  | 600 | Heavy-duty and double-throw |
| 60 | 240 | Heavy-duty and double-throw |
|  | 600 | Heavy-duty and double-throw |
| 100 | 240 | Heavy-duty and double-throw |
|  | 600 | Heavy-duty and double-throw |
| 200 | 240 | Heavy-duty and double-throw |
|  | 600 | Heavy-duty and double-throw |
| 400 | 600 | Double-throw |
| 600 | 240 | Heavy-duty |
|  | 600 | Heavy-duty |

Total price is the standard catalog number price plus the price adder from the table above depending on the number of safety poles. Order by description. A table of common 30A heavy-duty switches with "J" fuse clips factory installed is shown on
Page V2-T1-18 (field
modification kits are not available for 30A heavyduty switches).

Common 30A Heavy-Duty
Switches with "J" Fuse Clips Factory Installed

| Voltage | Switch Type <br> Three-Pole | Catalog <br> Number |
| :--- | :--- | :--- |
| 240 | NEMA 1 | DH321FGKJ |
|  | NEMA 3R | DH321FRKJ |
|  | NEMA 12 | DH321FDKJ |
|  | NEMA 4X | DH321FWKJ |
| 600 | NEMA 1 | DH361FGKJ |
|  | NEMA 3R | DH361FRKJ |
|  | NEMA 12 | DH361FDKJ |
|  | NEMA 4X | DH361FWKJ |

To order, add Suffix J to the standard catalog number (catalog number identifies voltage). Total price is the standard catalog number price plus the price adder depending on the number of safety switch poles.

Example: DH363FGKJ heavyduty, three-pole, 200A fusible switch at 480V with factoryinstalled Class "J" fuse clips.

## 12. Fuse Pullers Factory Installed

Item 12

| Ampere <br> Rating | Switch <br> Type |
| :--- | :--- |
| $30-60$ | Heavy-duty |
| 100 | Heavy-duty |
| 200 | General-duty and heavy-duty |

To order, add Suffix FE to the standard catalog number. Example: DH361FRKFE.
Note: Standard NEMA 12/3R, 4 and $4 X$ switches through 200A are supplied with fuse pullers from the factory.
13. Special Crimp Lug
Pads Factory Installed for
General-Duty and Heavy-
Duty Switches (Crimp
Lugs are Not Included)
To order add Suffix CK
to the standard safety
switch catalog number.
Item 13

| Ampere Rating |
| :--- |
| $400-600$ |
| 800 |
| Heavy-duty Type DH |
| switches, $30-200 \mathrm{~A}$ are |
| adaptable to crimp lugs, |
| simply remove the box lugs. |

## 14. Copper Lugs Factory Installed

Item 14

| Ampere <br> Rating | Switch <br> Type |
| :--- | :--- |
| 30 | Heavy-duty  <br>  Double-throw <br> 60 Heavy-duty <br>  Double-throw <br> 100 Heavy-duty <br> 200 Double-throw <br> 400 Heavy-duty <br> 600 General-duty and heavy-duty |

To order, add Suffix CL to the standard safety switch catalog number. The total price is the standard switch price plus the price adder.
Example: DH221FGKCL
heavy-duty, two-pole, 30A fusible switch at 240 V with copper lugs factory installed.

## 15. Equipment Ground Lugs <br> Factory Installed for <br> General-Duty and HeavyDuty Switches

Item 15

| Ampere Rating |
| :--- |
| $30-100$ |
| 200 |
| $400-1200$ |
| To order, add Suffix G to the |
| standard Safety Switch Catalog |
| Number. The total price is the |
| standard switch price plus the |
| price adder. |

## 16. Custom Lug

 ConfigurationsCustomer-specified lug arrangements are available on heavy-duty and double-throw safety switches. Contact the Safety Switch Flex Center for price and lead-time.
17. Auxiliary Contacts Factory Installed Provide Early-Make/Early-Break Operation

Item 17
General-Duty Switches 200-600A, Non-Metallic 30-200A,
Heavy-Duty 30-1200A and
Double-Throw Switches 30-800A

| Ampere <br> Rating | Description |
| :--- | :--- |
| $30-200$ | 1 NO/1NC |
| $2 N O / 2 N C$ |  |
| $400-1200$ | 1 NO/1NC |
|  | $2 N O / 2 N C$ |

To order 1NO/1NC
contacts, add Suffix 2
to the standard safety switch catalog number.

To order 2NO/2NC
contacts, add Suffix 3
to the standard safety switch catalog number.

The total price is the standard switch price plus the price adder.

## Example: DH423FGK2

Heavy-duty, four-pole, 100A
fusible switch at 240 V with
factory-installed 1NO/1NC contacts.

## Example: DT324FGK22

double-throw, three-pole, 200A fusible switch at 240 V with two factory-installed contacts (one installed in the normal ON position and one installed in the auxiliary ON position).

## 18. Control Pole Factory Installed Provides Late-Make/Early-Break Operation

The K-Series control pole provides one normally open contact, late-make, earlybreak operation. It mounts in the exact location as the neutral block using the same pre-drilled holes. This is directly connected to the power pole operating shaft. Direct connection and visible blades provide more secure electrical interlocking than handle linkage operation of a snap/switch type interlock. This reliability meets the requirements of many specifications for four-pole switches when the fourth pole is required for secure electrical interlocking.

Item 18

| Ampere <br> Rating | Switch <br> Type |
| :--- | :--- |
| $30-1200$ | Heavy-duty |
| $30-200$ | Double-throw |
| $400-600$ | General-duty |

To order, add Suffix CP to
the standard safety switch catalog number. The total price is the standard switch price plus the price adder.

## Example: DH267FGKCP

heavy-duty, two-pole, 800A
fusible switch at 480 V with factory-installed control pole.

Safety Switches

## 19. Switching Neutral Double-Throw

UL listed for three-pole and four-pole non-fusible doublethrow safety switches. Switching neutrals are required for separately derived systems when bonding the neutral of the generator to a grounding system at the generator.

## Item 19

| Ampere Rating |
| :--- |
| $30-200$ |
| 400 |
| 600 |
| 800 |

To order, add Suffix SN to the standard safety switch catalog number. The total price is the standard switch price plus the price adder.

Example: DT324URKSN non-fusible double-throw, three-pole, 200A switch with factory-installed switching neutral.

## 20. Neutral Assemblies

## Factory Installed for

Single-Throw Non-Fusible
Safety Switches
Available on 200-600A general-duty safety switches and 30-1200A heavy-duty safety switches.

Item 20

| Ampere Rating |
| :--- |
| $30-60$ |
| 100 |
| 200 NEMA $4,4 X, 12$ |
| 200 NEMA $1,3 R$ |
| 400 |
| 600 |
| 800 |
| 1200 |

To order, add Suffix $\mathbf{N}$ to the standard safety switch catalog number.

## Example: DH364UWKN

Heavy-duty, three-pole, 200A, NEMA 4X.

## 21. How to Order

Step One: Contact the Safety Switch Flex Center for price and delivery on product being modified. An authorized negotiation (TSP) number will be provided to track your order.
Safety Switch Flex Center
Phone: 1-888-329-9272 or
FlexSwitches@eaton.com
Fax: 1-423-478-0270
Step Two: Enter the order on VISTALINE ${ }^{\text {TM }}$ by description (with catalog number if it applies) and reference the authorized negotiation (TSP) number.

Vista suffix will be "ETS."
Product code will be "BE90."
For order entry assistance, contact CSC at:
Phone: 1-800-356-1243
Fax: 1-800-752-8602

## 22. How to Price

Step One: Select catalog number from Pages V2-T114 through V2-T1-83 of this catalog or Vista of the switch that needs to be modified.

Step Two: Use the correct price (from Vista or the current Price and Availability Digest) of the switch that needs to be modified. If no price exists, Flex Center will provide one.
Step Three: Refer to the modification on Pages V2-T116 through V2-T1-19 for price additions.

## Example: DT363URK

Options: factory installed Neutral (N)
Copper lugs (CL) ( $3 \times 120.00$ )

Step Four: Contact the Safety Switch Flex Center for authorized price and lead-time.

Note: Existing DSP, CSP and DOP pricing does not apply.

For application, availability or pricing questions, contact the Safety Switch Flex Center at

## 1-888-329-9272 or

FlexSwitches@eaton.com.

## Additional Safety Switch Flex Center Design Offerings

- Left-hand design (30-200A)
- Cover-mounted status lights and selector switches
- Integrated:
- Transient Voltage Surge Suppression (TVSS)
- Current transformers
- Double-throw receptacle switches
- $200 \%$ neutrals
- Seam-welded stainless steel
- Gang-operated kits:
- Mechanically interlocks two or three separate switches
- Cam-Lok ${ }^{\circledR}$ and Posi-Lok ${ }^{\circledR}$ receptacles
- Reverse feed
- Integrated wattmeter
- Custom enclosures
- Double-throw switches with windows
- 316 grade stainless steel
- Breather/drains
- Voltage/phase monitor

## Literature

The Safety Switch Flex Center's innovative approach to flexible engineering, manufacturing and customer service provides the shortest production, design and delivery cycle in the industry. Find out more about how the Safety Switch Flex Center can give you the safety switch solution you need... when you need them. ## Notes

(1) Single barrel lug that accepts one or two cables per phase as detailed above.
(2) The maximum size aluminum or copper-clad aluminum wire allowable for applications where the conductor enters or leaves the enclosure through the wall opposite its terminal is \#1 gauge.
(3) Double barrel lug that accepts two cables per phase as detailed above.

Although certain lug capacities are larger than required, only minimum wire bending space is provided per the requirements noted in NEC ${ }^{\circledR}$ Tables 373.6 (a) and (b) for respective ampere ratings.
A factory-installed ground lug is supplied in all heavy-duty safety switches.

## General-Duty

Short-Circuit Ratings Using Class "R", "J" or "T" Fusing Where Applicable (1)

Notes
(1) Class " H " fuse clips supplied as standard for $30-600 \mathrm{~A}$. Rated at $10,000 \mathrm{~A}$ rms symmetrical when using Class " H " fuses.
(2) Non-fusible values are based on combination rating with upstream device (see TD00801005E).
(3) Class "L" fuse connectors supplied as standard for 800A and 1200A.
(4) Class " H " fuse clips supplied as standard for $30-600 \mathrm{~A}$, except Class " T " for 400A at 600 V and 600 A at 240 V . Rated at $10,000 \mathrm{~A}$ rms symmetrical when using Class " H " fuses.
(5) Class "L" fuse connectors supplied as standard for 800A and 1200A
(6) Safety switch short-circuit ratings are applicable to AC only.
(7) Safety switch $\mathrm{I}^{2} \mathrm{t}$ and Ip values are identical to UL maximum acceptable $\mathrm{I}^{2} \mathrm{t}$ and Ip values for the corresponding class fuse.
(8) Table above is not applicable to the compact design shown on Page V2-T1-47. The compact design is suitable for use on a circuit capable of delivering not more than $10,000 \mathrm{rms}$ symmetrical amperes.

# 1.1 <br> Switching Devices 

## Safety Switches

## Short-Circuit Ratings of Non-Fusible Switches

The UL listed short-circuit ratings for Eaton non-fusible switches are based on the switches being properly protected by overcurrent protective devices. For applications that require a UL listed short-circuit rating of $10,000 \mathrm{rms}$ symmetrical amperes or less, an Eaton non-fusible switch must be properly protected by any overcurrent protective device rated no greater than the ampere rating of the switch. For applications that require a UL listed short-circuit rating of greater than $10,000 \mathrm{rms}$ symmetrical amperes, an Eaton non-fusible switch
must be properly protected
by the appropriate class and size fusing noted. Otherwise, this non-fusible switch must be replaced with an Eaton fusible switch that uses the appropriate fusing required. Molded-case circuit breaker protection of non-fusible Eaton switches for applications that require a short-circuit rating of greater than $10,000 \mathrm{rms}$ symmetrical amperes has been evaluated and is summarized below.
Refer to the reference tables for typical Eaton fusible switch UL listed short-circuit ratings.

UL Recognized Safety Switch/Circuit Breaker
Series-Connected Ratings

| Safety |  | Circuit Breaker <br> Maximum <br> Short-Circuit |  |
| :--- | :--- | :--- | :--- |
| Switch | Maximum <br> Ampere <br> Rating | System <br> Voltage AC | Rating (rms <br> Symmetrical) |
| 30 and | 600 | 25,000 | Circuit Breaker <br> Frame(s) |
| 60 |  | 18,000 | FDC, HFD, HFDE, EGH |
|  |  | 14,000 | FD, EGE |
| 100 | 600 | 25,000 | FDB |
|  |  | 18,000 | FDC, HFD, HFDE, EGH |
|  |  | 14,000 | FD, EGE |
|  | 480 | 35,000 | FDB |
| 200 | 600 | 25,000 | EGH, EGS |
|  |  | 18,000 | FDC, HFD, HFDE, HJD, JGH |
|  |  | 14,000 | FD, JD, JGE |
|  | 480 | 65,000 | FDB |

Safety Switches

## Information and Application

The circuit breaker or fuse rating is not to exceed the ampere rating of the nonfusible switch. When used on systems with greater than 10 kA short-circuit rating available, the UL Listed short-
circuit rating of the nonfusible switch is based upon the switch being used in combination with fuses or molded-case circuit breakers identified in the table below.

Non-Fusible Safety Switches

| Eaton Non-Fusible <br> Safety Switch <br> Ampere Rating | Maximum System Voltage AC | Maximum <br> Short-Circuit <br> Rating | Upstream D Fuse Class | Breaker Frame |
| :---: | :---: | :---: | :---: | :---: |
| 30 and 60 | 600 | 10,000 | H, K | Any circuit breaker |
|  |  | 14,000 |  | FDB |
|  |  | 18,000 |  | FD, EGE |
|  |  | 25,000 |  | FDC, HFD, HFDE, EGH |
|  |  | 200,000 | R, T, J, L |  |
| 100 | 480 | 10,000 | H, K | Any circuit breaker |
|  |  | 35,000 |  | EGH, EGS |
|  |  | 200,000 | R, T, J, L |  |
|  | 600 | 10,000 | H, K | Any circuit breaker |
|  |  | 14,000 |  | FDB |
|  |  | 18,000 |  | FD, EGE |
|  |  | 25,000 |  | FDC, HFD, HFDE, EGH |
|  |  | 200,000 (3) | R, T, J, L |  |
| 200 | 480 | 10,000 | H, K | Any circuit breaker |
|  |  | 65,000 |  | HFD, HFDE, HJD, JGH |
|  |  | 200,000 | R, T, J, L |  |
|  | 600 | 10,000 | H, K | Any circuit breaker |
|  |  | 14,000 |  | FDB |
|  |  | 18,000 |  | FD, JD, JGE |
|  |  | 25,000 |  | FDC, HFD, HFDE, HJD, JGH |
|  |  | 200,000 | R, T, J, L |  |

Notes
(1) For use on NEMA 1, 3R, 12/3R and 4 X switches.
(2) Fuse or circuit breaker rating is not to exceed switch rating.
(3) NEMA $12,4 / 4 \mathrm{X}$ only. NEMA $1,3 \mathrm{R}$ are 100 kAIC at 600 Vac .

Safety Switches

Class $T$
T-Tron Fuses
JJN (300V) JJS (600V)

Safety Switches

General Duty

## Product Description

- 30-600A
- Suitable for service entrance applications unless otherwise noted
- Fusible and non-fusible switches are 100\% load break and 100\% load make rated
- The continuous load current of fusible switches is not to exceed $80 \%$ of the rating of fuses employed in other than motor circuits. Non-fusible switches are 100\% fully rated
- 200-600A features K-Series design
- Horsepower rated
- Fusible and non-fusible switches. Single-pole $\mathrm{S} / \mathrm{N}$ through four-wire; 120/240, and 240 Vac
- With Class R fuses, switches may be used on systems capable of delivering 100,000A rms symmetrical
Note: Plug fuse switches are not service entrance rated.
- Bolt-on hub provision. Provided for general-duty switches in a NEMA 3R enclosure. See Page V2-T115 for selection

Application Description
For residential and commercial applications. Suitable for light-duty motor circuits and service entrance.

## Features, Benefits and Functions

## General-Duty (Cartridge Fuse)

- Ample wire bending space provides for easier installation
- Visible double-break quickmake, quick-break rotary blade mechanism
- Side opening door on all enclosures
- Mechanically interlocked cover to prevent easy access when the switch is in the ON position
- With Class R fuses, switches may be used on systems capable of delivering 100,000A rms symmetrical
- Clearly visible and accessible neutral where applicable
- Visible ON/OFF indication
- Tangential knockouts on 30-60A designs
- Ample wiring space
- Double padlocking capability on 30-100A
- Triple padlocking capability on 200-600A
- Additional door locking capability
- Bilingual English/Spanish door label on 30-100A
- Tri-lingual nameplates

Safety Switches

Standards and Certifications

- UL listed File No. E5239
- Meets UL 98 for enclosed switches and NEMA Std. KS-1

- Door cannot be opened when the handle is in the ON position. Front and side operable defeater mechanism provides for user access when necessary on singlethrow switches

## Tangential Knockouts

- An ample number are provided on the top, bottom and sides of both NEMA Types 1 and 3R enclosures through 200A

Bolt-On Hub Kits

- For switches in a NEMA Type 3R, 30-200A. Use a Myers type hub for all others

## All general-duty switches above 100A and all heavyduty switches incorporate these K-Series switch design features.

- Two points of contact provide a positive open and close, easier operation, and also help prevent contact burning for longer contact life

Visible Double-Break Rotary Blade Mechanism

- Protects against accidental contact with energized parts. Probe holes enable the user to test if the line side is energized without removing the shield. Not typically provided on general-duty switches, but available as a field kit or factory installed

Clear Line Shield

- Provide easy removal of fuses

Built-In Fuse Pullers (NEMA 12 and 4X 30-200A Only)

Clearly Visible Handle

- The position (ON or OFF) can be clearly seen from a distance and the length provides for easy operation

Triple Padlocking Capability

- Personnel safety feature because the large hasp can accommodate up to three 3/8-inch ( 9.5 mm ) shank locks

Additional Locking Capability

- Cabinet door can be further padlocked at the top and bottom as applicable

## Notes

(1) Maximum hp ratings apply only when dual element time delay fuses are used.
(2) These switches do not have an interlock that prevents door from being opened when switch is in the ON position.
${ }^{(3)}$ Use three-wire catalog numbers below.
(4) Solid neutral bars are not included. Order separately from table on Page V2-T1-14.
(5) WARNING! Switch is not approved for service entrance unless a neutral kit is installed.
(6) Grounded B phase rating, UL listed.

All general-duty safety switches are individually packaged.
Accessories are limited in scope on general-duty safety switches. See Page V2-T1-14 for availability. In addition, clear line shields are available as an accessory on 200-600A general-duty switches. Catalog Numbers: 200A $=70-7759-11,400 \mathrm{~A}=70-8063-8,600 \mathrm{~A}=70-8064-8$.

## Notes

(1) Maximum hp ratings apply only when dual element time delay fuses are used.
(2) Use four-wire catalog numbers below.
(3) Solid neutral bars are not included. Order separately from table on Page V2-T1-14.
(4) WARNING! Switch is not approved for service entrance unless a neutral kit is installed.
(5) These switches do not have an interlock that prevents door from being opened when switch is in the ON position.
(6) Use three-wire catalog numbers below.
(7) Drilled to accept field installed neutral kits.

All general-duty safety switches are individually packaged.
Accessories are limited in scope on general-duty safety switches. See Page V2-T1-14 for availability. In addition, clear line shields are available as an accessory on 200-600A general-duty switches. Catalog Numbers: 200A $=70-7759-11,400 \mathrm{~A}=70-8063-8,600 \mathrm{~A}=70-8064-8$.

## Heavy-Duty

## Product Description

- 30-1200A
- $600 \mathrm{Vac}, 600 \mathrm{Vdc}$ maximum
- Horsepower rated
- Fusible and non-fusible switches are 100\% load break and 100\% load make rated
- The continuous load current of fusible switches is not to exceed $80 \%$ of the rating of fuses employed in other than motor circuits. Non-fusible switches are 100\% fully rated
- Suitable for service entrance applications unless otherwise noted
- For factory modifications, refer to Pages V2-T1-16 through V2-T1-19

## Application Description

For heavy commercial and industrial applications where reliable performance and service continuity are critical.
For the toughest heavy commercial and industrial applications, refer to
Page V2-T1-76 for catalog information on our mill-duty safety switch

## Features, Benefits and Functions

- Deionizing arc chutes; arc chutes confine and suppress the arcs produced by opening contacts under load
- Mechanically interlocked cover to prevent easy access when the switch is in the ON position
- Clearly visible palm fitting red handle
- Complete accessory and renewal parts data shown on inner door label.
- 30-800A NEMA 12 designs convertible to NEMA 3R by opening factory-installed drain hole
- 30-1200A switches are seismic qualified and exceed the requirements of the Uniform Building Code ${ }^{\circledR}$ (UBC) and California Code Title 24
- Tri-lingual nameplates

Visible Double-Break Rotary Blade Mechanism

- Two points of contact provide a positive open and close, easier operation, and also help prevent contact burning for longer contact life

Clear Line Shield

- Protects against accidental contact with energized parts. Probe holes enable the user to test if the line side is energized without removing the shield. Not typically provided on general-duty switches, but available as a field kit or factory installed

Built-In Fuse Pullers (NEMA 12 and 4X 30-200A Only)

- Provide easy removal of fuses

## Clearly Visible Handle

- The position (ON or OFF) can be clearly seen from a distance and the length provides for easy operation

Triple Padlocking Capability

- Personnel safety feature because the large hasp can accommodate up to three $3 / 8$-inch ( 9.5 mm ) shank locks

Additional Locking Capability

- Cabinet door can be further padlocked at the top and bottom as applicable

Interlocking Mechanism

- Door cannot be opened when the handle is in the ON position. Front and side operable defeater mechanism provides for user access when necessary on singlethrow switches

Tangential Knockouts

- An ample number are provided on the top, bottom and sides of both NEMA Types 1 and 3R enclosures through 200A

Bolt-On Hub Kits

- For switches in a NEMA Type 3R, 30-200A. Use a Myers type hub for all others

## Standards and Certifications

- UL listed File No. E5239
- Meets UL 98 for enclosed switches and NEMA Std. KS-1

## Notes

(1) Horsepower ratings apply only when neutral is field installed and switch is used on a grounded $B$ phase system.
(2) Use three-pole catalog numbers below.
(3) Grounded B phase ratings, UL listed.
(4) Use NEMA 12. NEMA 12 enclosures (30-1200A) can be field modified to meet NEMA 3R rainproof requirements when a factory provided drain hole is opened.
(5) Contact the Safety Switch Flex Center (1-888-329-9272 or FlexSwitches@eaton.com) for availability of this product.

30A heavy-duty switches with Type J fuse provisions are available from the factory only. See table on Page V2-T1-18 for catalog numbers.
Suitable for service entrance use, except four-pole switches.

## Notes

(1) DC rating for 800 A switches is 250 V .
(2) Contact the Safety Switch Flex Center (1-888-329-9272 or FlexSwitches@eaton.com) for availability of this product.
(3) Ratings are for two-phase AC.
(4) Use NEMA 12. NEMA 12 enclosures (30-1200A) can be field modified to meet NEMA 3 r rainproof requirements when a factory provided drain hole is opened.

30A heavy-duty switches with Type J fuse provisions are available from the factory only. See table on Page V2-T1-18 for catalog numbers.
Suitable for service entrance use, except 1200A on 480Y/277 or 600Y/347 grounded wye systems, per NEC 215.10 and 230.95, and four-pole switches.

## Notes

(1) DC rating for 800 A switches is 250 V .
(2) Use NEMA 12. NEMA 12 enclosures (30-1200A) can be field modified to meet NEMA 3R rainproof requirements when a factory provided drain hole is opened.
(3) Contact the Safety Switch Flex Center (1-888-329-9272 or FlexSwitches@eaton.com) for availability of this product.
(4) Use three-pole catalog numbers below for $600 \mathrm{Vac}, 250 \mathrm{Vdc}$ maximum applications.
(5) Ratings are for two-phase AC.

30A heavy-duty switches with Type J fuse provisions are available from the factory only. See table on Page V2-T1-18 for catalog numbers.
Suitable for service entrance use, except 1200A on 480Y/277 or $600 \mathrm{Y} / 347$ grounded wye systems, per NEC 215.10 and 230.95 , and four-pole switches.

## Six-Pole Switches

## Product Description

- $600 \mathrm{Vac}, 250 \mathrm{Vdc}$ maximum
- 30-800A
- Fusible or non-fusible

## Application Description

A compact safety switch that's ideal for use in heavy industry...when an "in sight" disconnecting means is required for two-speed motors that are remote from their motor control devices.

## Features, Benefits and Functions

- Trunk-type latches keep the cover tightly closed and a neoprene gasket seals out moisture and dust from the switch assembly
- Visible double-break quickmake, quick-break rotary blade mechanism. Two points of contact provide a positive open and close, easier operation, and also help prevent contact burning for longer contact life
- Clear line shield protection
- Built-in fuse pullers
- Clearly visible handle
- Triple padlocking capability; cabinet door can be further padlocked at the top and bottom

## Standards and Certifications

- UL listed File No. E5239
- Deionizing arc chutes; arc chutes confine and suppress the arcs produced by opening
 contacts under load
- For factory modifications, refer to Pages V2-T1-16 through V2-T1-19

## Notes

(1) NEMA 12 enclosures $(30-800 \mathrm{~A})$ can be field modified to meet NEMA $3 R$ rainproof requirements when a factory provided drain hole is opened.
(2) Contact the Safety Switch Flex Center (1-888-329-9272 or FlexSwitches@eaton.com) for availability of this product.
(3) 600 Vdc rating requires that the switch be wired per the wiring diagram on the device publication.

30A heavy-duty switches with Type J fuse provisions are available from the factory only. See table on Page V2-T1-18 for catalog numbers.

Safety Switches

Heavy-Duty Double-Throw

## Double-Throw Switches

## Product Description

Used to transfer service from a normal power source to an alternate source...or to switch from one load circuit to another.

- 30-1200A
- Horsepower rated
- $600 \mathrm{Vac}, 250 \mathrm{Vdc}$ maximum
- 800-1200A fusible utilize common set of fuses; two Source 1 load applications
- Fusible or non-fusible
- Fusible and non-fusible switches are 100\% load break and 100\% load make rated
- Suitable for service entrance applications unless otherwise noted
- The continuous load current of fusible switches is not to exceed $80 \%$ of the rating of fuses employed in other than motor circuits. Non-fusible switches are 100\% fully rated
- Approved for service entrance with neutral or ground lug kit installed
- Wiring configuration from factory allows a single load to be supplied by a normal or alternate source. Can be field modified to allow two loads to be alternately supplied by a single power source

| V2-T1-3 |  |

## 240 Vac General-Duty, NonFusible, Compact Design, Double-Throw

- 30-100A
- Suitable for service entrance use with neutral kit installed
- Non-fusible

## 240 Vac General-Duty, NonFusible, Double-Throw

- 30-400A
- Horsepower rated
- Suitable for service entrance use with neutral kit installed
- Non-fusible
- Quick-make, quick-break operating mechanism

Safety Switches

- Ample wire bending space provides for easier installation
- Visible double-break quickmake, quick-break rotary blade mechanism. Two points of contact provide a positive open and close, easier operation, and also help prevent contact burning for longer contact life
- Triple padlocking capability. Personnel safety feature since the large hasp can accommodate up to three 3/8-inch ( 9.5 mm ) shank locks. Clearly visible handle. The position (ON or OFF) can be clearly seen from a distance
- Deionizing arc chutes; arc chutes confine and suppress the arcs produced by opening contacts under load
- Additional locking capability; cabinet door can be further padlocked at the top and bottom
- Clear line shield (provided on fusible double-throw) protects against accidental contact with energized parts. Probe holes enable the user to test if the line side is energized without removing the shield
- Tangential knockouts on sides, top and bottom. Enables any size of conduit to be mounted close to the wall, providing for cable installation closer to the wall and a neat appearance

## Standards and Certifications

- UL listed switching neutral capability is available on three-pole and four-pole non-fusible double-throw switches with the installation of the proper bonding kit shown on Page V2-T1-14
- Suitable for use as a manually operated switch per 2005 NEC Article 702
- UL listed File No. E5239

## Notes

(1) Field-installable neutral kit is not available. If a neutral is required, order the catalog number shown in the table with " N " suffix.
(2) Contact the Safety Switch Flex Center (1-888-329-9272 or FlexSwitches@eaton.com) for availability of this product.

UL listed switching neutral capability is available on three-pole and four-pole non-fusible double-throw switches with the installation of the proper bonding kit shown on Page V2-T1-14 See Page V2-T1-18 for factory installation from the Flex Center.

600 Vac Heavy-Duty, Non-Fusible, Double-Throw

## Notes

(1) Contact the Safety Switch Flex Center (1-888-329-9272 or FlexSwitches@eaton.com) for availability of this product.
(2) Rated $600 \mathrm{Vdc}, 50 \mathrm{hp}$ in addition to ratings shown in table.
${ }^{(3)}$ Field installable neutral kit is not available. If a neutral is required, order the catalog number shown in the table with " N " suffix.
(4) NEMA 12 enclosures ( $30-1200 A$ ) can be field modified to meet NEMA 3R rainproof requirements when a factory provided drain hole is opened.
(5) Also available in 240 Vac catalog number DT325UDK.

UL listed switching neutral capability is available on three-pole and four-pole non-fusible double-throw switches with the installation of the proper bonding kit shown on Page V2-T1-14. See Page V2-T1-18 for factory installation from the Flex Center.

NEMA 3R, 30-400A, General-Duty, Non-Fusible, Double-Throw

## Notes

Class "H" fuse clips supplied as standard for 30-400A except Class "T" for 400A at 600V. Rated at $10,000 \mathrm{rms}$ symmetrical when using Class " H " fuses.
Table is not applicable to the compact design shown on Page V2-T1-47. The compact design is suitable for use on a circuit capable of delivering not more than $10,000 \mathrm{rms}$ symmetrical amperes.
Class " $R$ " fuse adapter kits are shown on Page V2-T1-14. Individual adapter kits are applicable as shown on Page V2-T1-14 and yield the short-circuit ratings per the tables above when Class "R" fuses are installed. When installed, Class " $R$ " fuse adapter kits reject all fuses except Class "R."
Class " $J$ " fuse provisions can be obtained on most 60-400A safety switches by moving the fuse base to a new position as instructed by the device publication label. Class " J " fuse adapter kits, where needed, are shown on Page V2-T1-14 and yield the short-circuit ratings per the tables above when Class "J" fuses are installed. Class "J" fuse provisions must be factory installed on 30A heavy-duty switches. Catalog numbers are shown in table on Page V2-T1-18. Class "J" fusing is not applicable on 30-200A general-duty switches, 30-100A double-throw switches, and any switch higher than 600A.
Class " $T$ " fuse adapter kits are shown on Page V2-T1-14. Individual adapter kits are applicable to 200-800A switches as shown on Page V2-T1-14 and yield the short-circuit ratings per the tables to the left when Class " $T$ " fuses are installed. On 1200A switches, Class " $T$ " fuse provisions can be obtained by moving the fuse base to a new position as instructed by the device publication label.

## EnviroLine—Stainless Steel Switch

## Product Description

Primarily for use in the meat packing and food processing industries or any application where water is frequently used to hose down equipment. In addition to the stainless steel NEMA $4 X$ enclosure, the interior mechanism, backpan and springs are stainless steel. Ratings for these heavy-duty switches are 30-400A, 240600 Vac , available as fusible and non-fusible switches.

## Features

- Stainless steel enclosure (304 grade)
- Stainless steel mechanism (304 grade)
- 30-400A
- Horsepower rated
- Suitable for service entrance use

## Standards and Certifications

- Upper and lower window UL listed and NEMA approved
- UL 98
- UL listed under Section 508
- UL listed File No. E165150 and E5239

## Notes

(1) DC rating for 400 A switches is 250 V .
(2) Contact the Safety Switch Flex Center (1-888-329-9272 or FlexSwitches@eaton.com) for availability of this product.

30A heavy-duty switches with Type J fuse provisions are available from the factory only. See table on Page V2-T1-18 for catalog numbers.

## EnviroLine-Upper and Lower Window Switches

## Product Description

The new enlarged window on 30-100A ratings allows visual blade position verification and blown fuse indication without opening the door. Higher ampere ratings continue to use the upper and lower window design. The upper window switch provides visual verification of ON/OFF status (blade position), while the lower window design shows fuse status on fuses with blown fuse indicators. Overall ratings are $30-800 \mathrm{~A}$, $240-600 \mathrm{Vac}$, fusible and nonfusible. Available in NEMA 12/3R, 4X stainless steel enclosures.

## Features

Upper Window

- 30-800A
- Blade visibility when door closed
- 240 V and 600 V , fusible and non-fusible
- Suitable for service entrance use
- NEMA 12, 4 and 4 X enclosures

## Lower Window

- 30-600A
- Power plugs not supplied with the receptacle
- Lower viewing window over fuses to allow visual verification of blown fuse indicators for Littelfuse, Inc. fuses
- 240 V and 600 V , fusible
- Suitable for service entrance use

## Standards and Certifications

- Upper and lower window UL listed and NEMA approved
- UL 98
- UL listed under Section 508
- UL listed File No. E165150 and E5239
- NEMA 12, 4 and 4X enclosures

## Notes

(1) For two-pole applications, use outside poles of three-pole switch.
(2) NEMA 12 enclosures (30-800A) can be field modified to meet NEMA 3 R rainproof requirements when a factory provided drain hole is opened.

30A heavy-duty switches with Type J fuse provisions are available from the factory only. See table on Page V2-T1-18 for catalog numbers.
Effective August 2003, 30-100A window switches offer visible blade verification and blown fuse indication in a single design as shown in the photos. The window is replaceable. Higher ampere ratings will continue to be manufactured with a non-replaceable epoxy affixed design with visible blade verification only.

## Safety Switches

240 Vac Heavy-Duty, Fusible, Single-Throw with Lower Viewing Window

600 Vac Heavy-Duty, Fusible, Single-Throw with Lower Viewing Window

## Notes

(1) For two-pole applications, use outside poles of three-pole switch.
(2) NEMA 12 enclosures $(30-600 A)$ can be field modified to meet NEMA 3 r rainproof requirements when a factory provided drain hole is opened.

Effective August 2003, 30-100A window switches are replaced by a full view window that allows blade position verification and blown fuse indication. See table on Page V2-T1-18 for catalog numbers.

Safety Switches

## Shunt Trip Safety Switch

## Product Description

Eaton's tried and true heavyduty safety switch line expands to include shunt trip capability-remote switching and visible means of disconnect for commercial and industrial applications.

The shunt trip technology enhances safety by providing a means to open a safety switch electronically. When using an emergency stop, safety interlock or similar means, the remote operation capability of the shunt trip switch no longer requires personnel to manually open the switch with the handle, enhancing safety and improving productivity.

The shunt trip safety switch builds on Eaton's extensive portfolio of safety switch solutions, incorporating a side-handle operation mechanism and visible blade indication that have decades of successful installation and operation.

## Application Description

The shunt trip safety switch can be configured to meet the needs of safety applications in industrial and commercial environments. The switches can be signaled to electronically operate the trip mechanism and interrupt the flow of power when a defined electrical condition is detected via protection relay (for example, ground fault, undervoltage, blown fuse shutdown).

## Application Examples

- E-stop
- Safety interlocking
- Machinery OEM interlocking
- Remote opening (distant from switch)
- Cost-effective solution for high-interrupt applications
- Ground fault ©
- Phase reversal / phase loss (1)
- Blown fuse shutdown (1)
- Undervoltage release ©

## Note

(1) Shunt trip switch provides solenoid/coil to facilitate shunt trip, specific relay and applicable power supply provided by others.

Safety Switches

## Features

- Variety of coil voltages available
- Visible means of disconnect
- Standard heavy-duty safety switch design with integrated shunt trip module
- Passes Class 1 ground fault testing (1200\% opening)
- 30-800 A (240-600 Vac) ©
- Horsepower ratings are the same as Eaton's standard heavy-duty safety switches
- Fusible devices have shortcircuit ratings of up to 200 kAIC

## Options

Flex Center modifications available, such as viewing windows, pilot lights and more.

## Standards and Certifications

- UL 98 file number E5239 (600 Vac maximum)
- CSA C22.2 No. 4, file number LL69743 (600 Vac maximum)
- Enclosure ratings: NEMA 12/3R, 4 (painted steel), 4X (stainless steel)
(UL) SA

## Catalog Number Selection

Shunt Trip Safety Switch

## Note

(1) Contact factory for availability of 1200 A switch.

## Notes

(1) Class H fuse clips supplied as standard on fusible devices $30-600 \mathrm{~A}$, Class L for 800 A ; Class R, J, T fuse clips available.
(2) Four-pole devices are wider than dimension for 30,60 and 100 A devices. Consult factory for details.
(3) Accurate for all enclosure NEMA type ratings-12/3R, 4, 4X stainless steel.

For additional technical information, please refer to Technical Data TD008003EN.

[^2]Safety Switches

## Quick Connect Switches

## Product Description

240V, 600 Vac Heavy-Duty, Single-Throw with Cam-Lok or Posi-Lok Receptacles, Fusible, Non-Fusible

- 30-800A
- NEMA 1 or 3R enclosures
- Provision for $200 \%$ neutral
- Non-magnetic metal mounting plate
- Crouse-Hinds "J" Power Series E1015, E1016, E1017 cam connectors
- Crouse-Hinds E200, E400 Posi-Lok panels
- Connector plugs are typically not provided, but may be special ordered

## Features

Eaton's individual cable connector receptacle switches provide a convenient and safe way to quickly connect and disconnect portable equipment. The load side terminals are factory wired to individual receptacles located behind an interlocked door for added safety. The switch cannot be turned to the ON position without first closing the receptacle compartment door.
A spring-loaded flap door in the receptacle compartment allows the cables to exit the compartment, but seals the compartment when the switch is not in use. For outdoor applications, this will reduce the possibility of insects building nests in the receptacle compartment.

Quick Connect Double-Throw

## Notes

(1) When upper and lower switches are the same, the switch configuration is consolidated in one letter (e.g., " $U$ " not " $U U^{\prime \prime}$ ). Also, a switch with a neutral will have either a solid neutral or a switched neutral, not both. Lastly, a switched neutral pole is never fused.
(2) This field is only used when a switch is completely non-fused.

This table is intended for use in breaking down existing catalog numbers. It is not intended for building new catalog numbers.

## Notes

(1) Grounded B phase ratings, UL listed.
(2) Contact the Safety Switch Flex Center (1-888-329-9272 or FlexSwitches@eaton.com) for availability of this product.

Operating mechanism is standard plated steel. For type 304 stainless steel operating mechanism, contact the Safety Switch Flex Center (1-888-329-9272 or FlexSwitches@eaton.com).

## Mill-Duty Rated, Heavy-Duty, Fusible, Non-Fusible, Single-Throw

## Product Description

240V, 600 Vac Heavy-Duty,
Fusible, Non-Fusible,
Single-Throw

- 30-600A
- Horsepower rated
- Suitable for service entrance use
- Factory-installed copper ground lug
- Copper terminal lugs
- Fuse pullers through 200A
- For factory modifications, refer to Pages V2-T1-16 through V2-T1-19

Standards and Certifications

- UL listed File No. E5239

Safety Switches

## Notes

(1) Contact the Safety Switch Flex Center (1-888-329-9272 or FlexSwitches@eaton.com) for copper neutrals.
(2) NEMA 12 enclosures ( $30-600 \mathrm{~A}$ ) can be field modified to meet NEMA 3 R rainproof requirements when a factory provided drain hole is opened.
(3) Contact the Safety Switch Flex Center (1-888-329-9272 or FlexSwitches@eaton.com) for availability of this product.
(4) Use three-pole catalog numbers below for $600 \mathrm{Vac}, 250 \mathrm{Vdc}$ maximum applications. For 600 Vdc , see note ${ }^{3}$.
(5) DC rating for $400-600 \mathrm{~A}$ switches is 250 V .
(6) For two-pole applications, use outside poles of three-pole switch.

## Heavy-Duty Fusible Safety Switches Accepting Cube Fuses

## Product Description

## 600 Vac Heavy-Duty,

## Fusible, Single-Throw

Cube fuses installed in a safety switch provide fingersafe protection, Class J time delay electrical performance with a smaller footprint than Class J or CC fusing, and blown fuse indication.

- 30-100A
- Horsepower rated
- For factory modifications, refer to Pages V2-T1-16 through V2-T1-19

Standards and Certifications

## Elevator Control Switch

## Features, Benefits and Functions

## Standard Features

- 30-400A, 600 Vac threephase fused power switch
- 200,000A rms short-circuit current rating
- Shunt trip 120 V
- Control power terminal block
- Ground lug per NEC
- Class J Fuse mounting only (Class J Fuses not included)
- Key to test switch 120 V
- Mechanically interlocked auxiliary contact for hydraulic elevators with automatic recall (5A, 120 Vac rated) 1NO, 1NC

## Optional Features

- Control power transformer with fuses and blocks
- Fire safety interface relay
- Pilot light—ON
- Isolated neutral lug (oversized 200\% rated neutral option available where required by excessive nonlinear loads)
- Fire alarm voltage monitoring relay (to monitor shunt trip voltage)
- NEMA 3R, 4 and 12 enclosures available through 200A
- Phase failure and undervoltage relay available, consult factory
- For added protection, use Eaton fuse covers to improve maintenance personnel protection, through 200A (OSHA 1910.333, Paragraph C)

## Standards and Certifications

- UL 98 Enclosed and

Deadfront Switch
Guide 96NK3917,
File No. E182262

- NEMA 1, UL 50, listed enclosure
- cUL ${ }^{\circledR}$ per Canadian

Standards C22.2,
No. 0-M91-CAN/CSA ${ }^{\circledR}$
C22.2, No. 4-M89
Enclosed Switch

## Catalog Number Selection

Elevator Control Switch

## Catalog Number Example: ES3T1R1GF3

- 100A S.T. switch 480V-3P—ES3
- 480-120V CPT-T1
- 120 Vac coil fire safety interface relay-R1
- Pilot light—ON (Green)—G
- Fire alarm voltage monitoring relay (three-pole)-F3

## Auxiliary Power Heavy-Duty Safety Switch

## Product Description

NEC Article 210.63 requires that a 125 V , single-phase, 15 or 20A rated receptacle outlet be installed at an accessible location for the servicing of heating, airconditioning and refrigeration equipment. The receptacle must be located on the same level and within 25 ft (7.5m) of the heating, airconditioning and refrigeration equipment. Eaton's heavyduty safety switch is an ideal solution for these applications, including elimination of the need for running a separate 120 V circuit to the rooftop.

## 1.1 Switching Devices <br> Safety Switches

## Left-Handed Safety Switch

## Product Selection

## Ordering Information

Step One: Left-handed safety switches are available from 30-200A for applications requiring an operating handle on the left side of the enclosure. Select the standard safety switch from the catalog and add Suffix LH to the catalog number.

Step Two: Contact the Safety Switch Flex Center for complete pricing and delivery information. The Flex Center will provide a list price. An authorized negotiation (TSP) number will be provided to track your order.

Safety Switch Flex Center Phone: 1-888-329-9272 or FlexSwitches@eaton.com Fax: 1-423-478-0270

Step Three: Enter the order on VISTALINE by description (with catalog number as applicable) and reference the authorized negotiation (TSP) number.

Vista suffix will be "ETS." Product code will be "BE90."

For order entry assistance, contact CSC at: Phone: 1-800-356-1243 Fax: 1-800-752-8602

Note: Left-handed safety switches are supplied with a C361H1 handle.

## Pringle Bolted Pressure Switch

## Product Description

Eaton Pringle ${ }^{\circledR}$ switches have helped pioneer development of high-quality electrical products for commercial and industrial applications since 1891. Eaton's commitment to engineering excellence and reputation for quality have made us a recolonized leader in the electrical industry, and today you'll find our electrical products in use throughout the U.S., Canada and most of the world's major markets. Eaton Pringle bolted contact switches were the first in the industry and are a worldwide standard in high-current switching applications. They are custom-built and used in many heavy-duty applications, and are suitable for use in UL 891 switchboards.

## Bolted Pressure Contacts

All Pringle switches feature bolted pressure contacts. The result: blade contact surfaces are bolted closed at a pressure of 600 PSI -at both the hinge and jaw ends. The benefit: current conducting efficiency is the equivalent of a bolted bus bar connection.

## Features

- 480 V UL
- 600 V CSA
- 800-4000 Amperes
- 5000-6000 Amperes (not UL listed)
- 200 kAIC and $100 \%$ rated with Class "L" fuses
- Top or bottom feed
- Two, three- or four-pole
- Optional blown fuse detection and protection
- Quick-positive switching action
- Manual or electrically operated mechanism
- 6X Make/12X Break contact rating
- Pringle Flex Center can offer custom assemblies; for quotes, call 1-888-3299272 option 2
- Many options available, see following page

## Spring Mechanism

All quick action switches use a unique spring mechanism for improved reliability over traditional coil springs. The unique spring design is created by a series of concave-convex washers. The paired-washer spring design provides a higher force/distance ratio, making it easier to operate the mechanism.

Should any pair of washers become inoperable for any reason, the entire spring assembly will still be operable by means of the remaining pairs. This is unlike the situation if a coil spring were to fracture or fatigue.

Sample Spring Configuration

## Pringle Bolted Pressure Switch

Pringle Mill Switch (2)
(NEMA 1/3R/12 Enclosed)

## Notes

(1) Not UL listed. A separate control box may be required when adding accessories.
2) Does not carry UL listing.
(3) Not an option with QA type switches. GF option includes control power transformer.
(4) 110 Vdc and 125 Vdc also available. Please contact the Cleveland, TN plant.
(5) For different system voltage requirements, please contact the Cleveland, TN plant.
(6) For QA switches, use 480 V system catalog number when referencing a 208 V system.
(7) Only applicable if ordering a CPT only, without ground fault.
(8) Only available with QA switches and in a top-feed configuration.
(9) 250 Vdc.
(10) 480 Vac.
(11) Additional available accessories/options-door interlock, special nameplates, custom dimensions, special paint and auxiliary contacts. Please inquire with the Cleveland, TN plant.

## Product Selection

## Manually Operated (OA)UL Listed

Manually operated contact switch with quick positive switching action. Can be top or bottom fed.

Electrical Trip (CBC)—UL Listed
Contact switch with charge-before-close mechanism. Can be manually or electrically tripped. Optional blown fuse detector and phase failure relay with capacitor trip available.

## Fault Protector Electrical Trip

 (FP)-UL ListedThe FP combines the features of a CBC switch but includes an integrated zero-sequence sensor and ground fault.

## Electrically Operated Electric Trip (EO)-Not UL Listed

The EO combines the features of a CBC switch, but includes an operator with a linear motor that electrically closes the switch while charging the stored energy mechanism for stored energy trip.

## Pringle Mill Switch (PMS)-

 Not UL ListedManually operated contact switch with quick-positive switching action. Comes in a NEMA 1/3R/12 enclosure with a side-operated mechanism. Can be fusible or non-fusible, two- or threepole configurations.

## Service

Eaton's Pringle switches have always been manufactured with precisionmade parts, and, like any mechanical device, they do require routine maintenance in order to operate at the optimal level. Over time, contact surfaces may be exposed to dirt and other contaminants, which could result in improper mechanical and/or electrical operation of the switch.
Eaton maintains a dedicated service team that has over 100 years of combined experience in the exclusive service and repair of Pringle switches. A service call performed by a certified technician ensures that your equipment is cleaned, lubed, adjusted and repaired, and a one-year extended warranty is granted. General maintenance, repair/ refurbishment and troubleshooting are just some of the services provided.

## In-House Service

Eaton also offers in-house inspection, service and repair at our manufacturing facility in Cleveland, TN.

## Aftermarket Parts

Eaton has a full line of factoryspecified aftermarket parts for Pringle switches, as well as complete, form, fit, function, drop-in replacement switches. Aftermarket part information can be found in publication TD00808001E.

## 'Flex' Custom Capabilities

Custom solutions are standard throughout Eaton's switching device product line and bolted pressure contact switches are no exception. When a standard product will not meet the customer's need, Eaton's engineering and marketing teams can develop and offer solutions built to the customer's expectation.

## Engineered-to-Order, or

 'Flex', Non-Load-Break switch solutions with bolted pressure contact technology vary as noted below.- Motor operated: 800 to 6000A
- High current: 6000 to 35,000 A+
- Medium voltage: $5 \mathrm{kV}, 15 \mathrm{kV}+$
- DC voltages: 250 Vdc to 3000 Vdc+
- Transit applications: single-, two-or three-pole DC rated
- Manual transfer switches
- Live front switches

## Type DS, Fusible and Non-Fusible

## Product Description

Type DS disconnect is a compact load break switch using the DE-ION arc-quenching principle and quick make/quick break over center toggle mechanism. It has visible contacts, is UL listed and is available either as a fusible or non-fusible switch.

Note: Switches through 200A are UL listed as miscellaneous switches; 400 and 600A switches are recognized under the component program of Underwriters Laboratories.

## Standards and Certifications

- UL 98

## Product Description

Complete Model A switch styles with fuse or non-fuse kits mounted are UL listed. Refer to "Electrical Construction Materials List," miscellaneous switches. Switches only, no fuse, fuse clip kit and all Model T switches are recognized under the component program of Underwriters Laboratories. The external operating handle of Model A can be padlocked in the OFF position with up to three padlocks.

## Notes

(1) Model A shipped as basic switch, operating handle, shaft and fuse or no-fuse kit. Model T shipped as basic switch and fuse or no-fuse kit.
(2) External operating handle, shaft and fuse or no-fuse kit required.
(3) Fuse or no-fuse kit required.
(4) Includes fuse clips and Micarta barriers.
(5) Will also accept non-rejection type current limiting fuses:

Bussmann: 15-60A type KTN and KTS (ferrule type), 65-200A type KTN and KTS (blade type)
Chase Shawmut: 15-60A type 1 (ferrule type), 65-200A type 3 (blade type)
Federal Pacific Electric ${ }^{\circledR}$ : 15-200A types NCL and SCL
© Special 60A switch has same dimension as 30A Visi-Flex switch. Standard 60A switch has same dimension as 100A Visi-Flex switch.
(7) Rated 600 V .

## Flange Mounted—Variable Depth

## Product Description

Type C361 disconnect switches are suitable for installation in control enclosures having a righthand flange. Fusible disconnect switches will accept $R$ fuses as standard. Field installable rejection kits are supplied as standard on 100 and 200A clips. For 30 and 60A rejection clips, see footnote © ${ }^{\text {on }}$ next page. The switch is UL component recognized for use on systems with up to 200,000 rms symmetrical amperes available fault current when Class R clips are supplied.

## Safety Switches

## Accessories

## Type C361 NEMA 12 Safety Door Hardware

Type C361 door hardware kits are designed to function with all C361 and C371 disconnect switches and circuit breaker operating mechanisms

These kits are designed for use with small enclosures up to 40 inches ( 1016 mm ), intermediate 40-60 inches (1016-1524 mm) or larger floor cases over 60 inches $(1524 \mathrm{~mm})$ to provide enclosure sealing and protection against
unauthorized entry. These kits can be used on enclosure flanges with material thickness ranging from 16 gauge through $3 / 16$ inches with flanges on the right side only. Door hardware kits are to be installed in a commercially available enclosure. Consult the enclosure manufacturer application data for proper kit selection.

## Product Description

- 15-1200A
- Enclosed device used to open and close a circuit

## Application Description

## NEMA 1 General Purpose

## Surface or Flush Mounting

 15-1200A, 600 Vac, 500 VdcNEMA 1 enclosed breakers are designed for indoor use in commercial buildings, apartment buildings and other areas where a general purpose enclosure is applicable. The breaker is front operable and is capable of being padlocked in the OFF position. Ratings through 1200A are listed with Underwriters Laboratories as suitable for service entrance application. Both surface and flush mounted enclosures are available.

NEMA 1 General Purpose

## NEMA 3R Rainproof Surface Mounting ${ }^{\text {a }}$

## Interchangeable Hubs (through

 400A) 15-1200A, 600 Vac, 500 VdcThis general purpose outdoor service center employs a circuit breaker inside a weatherproof sheet steel enclosure to serve as a main disconnect and protective device for feeder circuits. The breaker is front operable and is capable of being padlocked in the OFF position. Ratings through 1200A are listed by Underwriters Laboratories as suitable for service entrance application.

NEMA 3R Rainproof Surface Mounting

## Note

(1) SFDN enclosed breakers do not have a door interlock to prevent door from being opened when breaker is "ON."

NEMA 4/4X, 5 Water and Dustproof

## Stainless Steel-Type 304 Surface Mounting 15-1200A, 600 Vac, 500 Vdc

This enclosure meets NEMA 4/4X and 5 requirements for water and dustproof applications and has no knockouts or other openings. It is particularly well suited for use in dairies, borax mines, breweries, paper mills and other process industries. The operating handle can be padlocked in the OFF position, and is interlocked to prevent the door from opening when the breaker is ON. Ratings through 1200A are Underwriters Laboratories listed as suitable for service entrance application.

NEMA 4/4X Water and Dustproof

## NEMA 12 Dustproof Surface Mounting

No Knockouts or Other Openings 15-1200A, 600 Vac, 500 Vdc
The Type 12 enclosure is designed in line with specifications for special industry application where unusually severe conditions involving oil, coolant, dust and other foreign materials exist in the operating atmosphere. The handle padlocks in the OFF position and the cover is interlocked with the handle mechanism to prevent opening the cover with the circuit breaker in the ON position. Ratings through 1200A are UL listed as suitable for service entrance application. A NEMA 12 semi-dust-tight design that includes knockouts is available. These units are rated 15-400A, 600 Vac, 500 Vdc.

NEMA 12 Dustproof Surface Mounting

## NEMA 7/9 Hazardous Location

Cast Aluminum, Explosion-proof Surface Mounting 15-1200A, 600 Vac, 250 Vdc
Hazardous location, Type 7: Class I, Groups B, C, D; Type 9: Class II, Groups E, F, G. This special service cast aluminum enclosure is supplied with a wide, machined flanged cover to prevent igniting outside atmospheres by arcing from inside the enclosure. Front operable, the handle padlocks in the OFF position. Enclosures rated 600A and above have lift-off hinges for ease of assembly.

Note: XFDN050B is not Group B compliant.

NEMA 7/9 Hazardous Location

## Features, Benefits and Functions

- Side-opening door on NEMA 3R enclosures
- Padlockable in the OFF position
- Surface or flush mounted enclosures available through 400A on NEMA 1 enclosures
- Interlocked handle on NEMA 3R, 4/4X, 5 and 12 enclosures to prevent opening when the breaker is in the ON position
- Interchangeable hubs
- Numerous factory options

## Standards and Certifications

- UL 489
- CSA 22.2
- NEMA 250

NEMA 1 General Purpose

- UL File No. E7819
- CSA File No. LR84319

NEMA 3R Rainproof Surface Mounting

- UL File No. E7819
- CSA File No. LR84319

NEMA 4/4X, 5 Water and Dustproof

- UL File No. E7819
- CSA File No. LR84319

NEMA 12 Dustproof Surface Mounting

- UL File No. E7819
- CSA File No. LR84319

NEMA 7/9 Hazardous Location

- UL File No. E84577
- CSA File No. LR42131-6

## Enclosed Circuit Breakers

## Product Selection

1. Use the data on Page V2-T1-119 to determine type of enclosure required.
2. Use the data on Page V2-T1-113 and V2-T1-114 to determine circuit breaker required.
3. Pages V2-T1-115 through V2-T1-121 include rough-in dimensional information.

| Notes |  |  |  |
| (1) Suitable for use with single-pole breaker. Base mounting plate kit. OCCBP required. <br> (2) Maximum wire size: $4 / 0$. |  |  |  |
| (3) Not applicable for XKDN400B. |  |  |  |
| (4) Short-circuit ratings are limited for high interrupting rated breakers. Refer to Page V2-T1-113. |  |  |  |
| (5) Can be field converted to NEMA Type 3R. |  |  |  |

| (3) Breaker frames include both thermal magnetic and electronic trip versions. <br> (4) Cu conductors only. |  |  |  |
| (5) Cu conductors only, $90^{\circ} \mathrm{C}$ wire sized at $75^{\circ} \mathrm{C}$ ampacity. Conductor extensions and barriers required. |  |  |  |
| (6) Maximum interruption ratings as follows, 100 kAIC at $240 \mathrm{Vac}, 65 \mathrm{kAIC}$ at $480 \mathrm{Vac}, 35 \mathrm{kA}$ $600 \mathrm{Vac}, 30 \mathrm{kAIC}$ at $250 \mathrm{Vdc}, 30 \mathrm{kAIC}$ at 500 Vdc . |  |  |  |

## Switching Devices

## Enclosed Circuit Breakers

## Accessories

Nameplates Applied
Customer must provide nameplate legend at the time of order.

Key Interlock Systems
Interlocks are used to prevent an authorized operation. Before system construction can begin, the following information must be known:

1. User-name, address and telephone number.
2. Complete lock scheme required.

## Neutral Assemblies Installed

Ampere ratings: 100, 250, $400,600,800$ and 1200.

## Separate Ground Lug

 InstalledAmpere ratings: 100, 250, 400, 600 and 1200.
Special Paint Finish

## Notes

(1) Ground fault application not available with NEMA 7/9. Contact Eaton's Customer Support Center.
(2) Add to the appropriate RD RMS 310 adder.

## Raintight Hubs

All rainproof enclosures 30-400A are shipped with plate over cutout. Hubs are not supplied with screws on 30-400A enclosures. Use screws from plate.

## Breather and Drain, Hazardous Enclosures

A Universal Breather/Drain Fitting is installed in the top of an enclosure to provide ventilation to minimize condensation and in the bottom to allow drainage of accumulated condensation while maintaining explosion-proof integrity.

Neutral Kits, Insulated and Groundable

| Maximum Enclosure <br> Rating (A) | Main Lug Size <br> Cu/AI | Catalog <br> Number |
| :--- | :--- | :--- |
| 100 | SFDN100 | (1) $14-1 / 0$ |
| RFDN100 | (1) $14-1 / 0$ | DH100NK |
| 100 | (all others) | (1) $4-350$ kcmil |

## Note

(1) For use with 800 A and 1200 AM and N frame, and $100 \%$ rated.

## Modifications

Allowable accessory combinations can be reviewed in Eaton's Circuit Breaker Product Guide: PG.74.A.01.T.E. Verify final application with the Customer Support Center.

## Special RD Modifications and Accessories

Description

| 1600A neutral assembly (aluminum) |
| :--- |
| 2000 A neutral assembly (aluminum) |
| 2500A neutral assembly (aluminum) |
| 1600A neutral assembly (copper) |
| 2000A neutral assembly (copper) |
| 2500A neutral assembly (copper) |
| Adjustable rating plug |
| Lockoff, padlockable |
| Key interlock |
| Phase failure protection (includes shunt trip) |
| Zero sequence gfp (including shunt trip and test panel) |
| NEMA 3R flat roof |
| Heater package (includes cpt, heater, thermostat and disconnect) |
| Special sized enclosures |
| Standard is 90 -inch $\mathrm{H} \times 30$-inch W $\times 30$-inch D (2286 x $762 \times 762 \mathrm{~mm}$ ) |
| I0 metering |
| Non-standard terminations |

Switching Devices
Enclosed Circuit Breakers

## Flex Center

## Introduction

The Safety Switch Flex Center is a special facility at the site of our Cleveland, Tennessee, plant that is dedicated to providing customized enclosed circuit breakers that meet customers' challenging applications.

The Flex Center is a solutions center that provides real value:

- A dedicated and knowledgeable engineering/ manufacturing/customer service team to meet your needs
- A production facility stocked with a full arsenal of equipment to get the job done
- The industry's shortest lead-time
- Easy ordering through our distributors
- Factory-installed modifications include (but are not limited to) the following:
- Special size enclosure
- Special nameplates
- Stainless steel flush cover
- Special paint
- Lock-on provisions
- Neutral assembliesfactory installed
- Equipment ground lugs-factory installed
- Cover control (pilot lights, pushbuttons, selector switches, etc.)
- Factory-installed G-Frame breakers
- For application, availability or pricing questions, contact the Safety Switch Flex Center at 1-888-329-9272 or FlexSwitches@eaton.com

## Notes

(1) N.I.T.U. is non-interchangeable trip unit and I.T.U. is interchangeable trip unit.
(2) Two-pole circuit breaker, or two poles of three-pole circuit breaker at 250 Vdc .
${ }^{3}$ Not defined in W-C-375b.
(4) Not suitable for use with 100A enclosures.

## Enclosed Circuit Breakers

Industrial Circuit Breaker Selection, continued

Notes
(1) N.I.T.U. is non-interchangeable trip unit and I.T.U. is interchangeable trip unit.
(2) Two-pole circuit breaker, or two poles of three-pole circuit breaker at 250 Vdc .
(3) HLD: NEMA 1 enclosed: $240 \mathrm{Vac}=100 \mathrm{kA}, 480 \mathrm{Vac}=65 \mathrm{kA}, 600 \mathrm{Vac}=35 \mathrm{kA}, 250 \mathrm{Vdc}=20 \mathrm{kA}, 500 \mathrm{Vdc}=25 \mathrm{kA}$.

NEMA 3R enclosed: $240 \mathrm{Vac}=65 \mathrm{kA}, 480 \mathrm{Vac}=50 \mathrm{kA}, 600 \mathrm{Vac}=25 \mathrm{kA}, 250 \mathrm{Vdc}=20 \mathrm{kA}, 500 \mathrm{Vdc}=25 \mathrm{kA}$.
(4) HMDL and HND: NEMA 1 and 3 R enclosed: $240 \mathrm{Vac}=100 \mathrm{kA}, 480 \mathrm{Vac}=65 \mathrm{kA}, 600 \mathrm{Vac}=35 \mathrm{kA}, 250 \mathrm{Vdc}=30 \mathrm{kA}, 500 \mathrm{Vdc}=30 \mathrm{kA}$.

NEMA 7/9 Cast Aluminum with Weather-Resistant Seals

## Conduit Openings

Refer to outline dimensions for size and location of standard conduit openings. In addition, 1/2-inch ( 12.7 mm ) openings are drilled and tapped for breather and drain. Unless ordered with breather and drain, these openings are plugged. Refer to Eaton for price of breather and drain.

## Notes

(1) Maximum wire size: 500 kcmil .
(2) Power cables must enter and leave from opposite ends (through-feed).

## Product Overview

Provide users with the ability to lock directly wired motor loads in the OFF position to comply with OSHA lockout/ tagout regulations. Also for machine applications that require compact, economical disconnect switches.

Enclosed rotary disconnect switches allow safe control and safe disconnect of any motor application.

## Features, Benefits and Functions

- Padlockable in the OFF position (up to three padlocks) to meet OSHA lockout requirements
- Available in 16-80A ratings
- 600 Vac, three- and fourpole non-fusible device
- Rated for making and breaking loads
- Accepts auxiliary contacts; capability to signal PLC controllers
- Ground lug connection provided
- Possibility of adding one power pole and one auxiliary contact
- NEMA ${ }^{\circledR}$ Type $1,3 R, 12$, 4, 4X

Open rotary disconnects can be found in Volume 5, Tab 3 titled: NEMA Manual Starters.

## Standards and Certifications

- Meets NEC ${ }^{\circledR}$ Article 430 requirements for a separate disconnect means within sight of all motor loads
- UL® ${ }^{\circledR}$ listed under Section 508
- UL listed File No. E165150
- CSA® listed under 22.2

No. 14, File 162136

## Product Description

Note: The following pages provide listings for most standard transformer ratings and catalog numbers. For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton

## Types DS-3, DT-3

- Ventilated, NEMA 2 enclosure standard
- Suitable for indoor applications, outdoors when weathershields are also installed
- Upright mounting only
- $220^{\circ} \mathrm{C}$ insulation system
- $150^{\circ} \mathrm{C}$ rise standard; $115^{\circ} \mathrm{C}$ or $80^{\circ} \mathrm{C}$ rise optional
- Available in single-phase ratings $15-167 \mathrm{kVA}$, 600 volts primary (DS-3)
- Available in three-phase ratings $15-1500 \mathrm{kVA}$ and up to 600 volts primary (DT-3)

## Application Description

NEMA TP-1-2002 compliant energy-efficient transformers are specifically designed to meet the energy efficiency standards set forth in NEMA Standards publication, TP-12002, "Guide for Determining Energy Efficiency for Distribution Transformers." Surveys have shown that the average loading of low voltage dry-type distribution transformers, over a 24 -hour period, is approximately 35\%. NEMA TP-1 compliant transformers are optimized to offer maximum efficiency at $35 \%$ of nameplate rating.
The range of products covered by NEMA TP-1-2002 are:

NEMA TP-1-2002
Product Range

|  | Voltage <br> Rating <br> Class | Voltage |
| :--- | :--- | :--- |
|  | Primary <br> voltage | 34.5 kV and <br> below |
|  | Secondary <br> voltage | 600 V and <br> below |
| Dry-Type <br> Rating | Single-phase | $10-833 \mathrm{kVA}$ <br> Three-phase |
| Liquid <br> Rating | Single-phase | $10-833 \mathrm{kVA}$ |

Transformers that are currently specifically excluded from the scope of NEMA Standard TP-1-2002 include:

- Liquid-filled transformers below 10 kVA
- Dry-type transformers below 15 kVA
- $A C$ and DC drives transformers
- Rectifier transformers designed for high harmonics
- Autotransformers
- Non-distribution transformers, such as UPS transformers
- Special impedance or regulation transformers
- Regulating transformers
- Sealed and non-ventilated transformers
- Machine tool transformers
- Welding transformers
- Transformers with tap ranges greater than 15\%
- Transformers with a frequency other than 60 Hz
- Grounding transformers
- Testing transformers

## Features, Benefits and Functions

- 60 Hz operation (except as noted)
- Short-term overload capability as required by ANSI
- Meet NEMA ST-20 sound levels
- Meet federal energy efficiency requirements for low voltage dry-type distribution transformers effective as of January 1, 2007

Standards and
Certifications

- UL® listed

## Industry Standards

All Eaton dry-type distribution and control transformers are built and tested in accordance with applicable NEMA, ANSI and IEEE Standards. All 600 volt class transformers are UL listed unless otherwise noted.

## Seismically Qualified

Eaton manufactured dry-type distribution transformers are seismically qualified and exceed requirements of the Uniform Building Code (UBC), International Building Code (IBC) and California Code Title 24.

## Notes

[^11]
## Accessories

## Technical Data and Specifications

## Frequency

Eaton standard dry-type distribution transformers are designed for 60 Hz operation. Transformers required for other frequencies are available and must be specifically designed.

## Overload Capability

Short-term overload is designed into transformers as required by ANSI. Dry-type distribution transformers will deliver 200\% nameplate load for one-half hour, $150 \%$ load for one hour and $125 \%$ load for four hours without being damaged, provided that a constant 50\% load precedes and follows the overload. See ANSI C57.96-01.250 for additional limitations.

Continuous overload capacity is not deliberately designed into a transformer because the design objective is to be within the allowed winding temperature rise with nameplate loading.

## Insulation System and Temperature Rise

Industry standards classify insulation systems and rise as shown below:

Insulation System
Classification

|  | + <br> Winding <br> Rise | + <br> Hot <br> Spot | $=$ <br> Temp. <br> Class |
| :--- | :--- | :--- | :--- |
| $40^{\circ} \mathrm{C}$ | $55^{\circ} \mathrm{C}$ | $10^{\circ} \mathrm{C}$ | $105^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $80^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ |
| $25^{\circ} \mathrm{C}$ | $135^{\circ} \mathrm{C}$ | $20^{\circ} \mathrm{C}$ | $180^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $115^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $185^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $220^{\circ} \mathrm{C}$ |

The design life of transformers having different insulation systems is the same-the lower-temperature systems are designed for the same life as the higher-temperature systems.

## Enclosures

Eaton's ventilated transformers, Types DS-3 and DT-3, use a NEMA 2 rated (drip-proof) enclosure as standard, and are rated NEMA 3R with the addition of weathershields.

## Winding Terminations

Primary and secondary windings are terminated in the wiring compartment Encapsulated units have copper leads or stabs brought out for connections. Ventilated transformers have leads brought out to terminals that are pre-drilled to accept Cu/Al lugs. Aluminum-wound transformers have aluminum terminals; copper-wound models have copper terminals. Lugs are not supplied with these transformers. Eaton recommends external cables be rated $90^{\circ} \mathrm{C}$ (sized at $75^{\circ} \mathrm{C}$ ampacity) for encapsulated designs and $75^{\circ} \mathrm{C}$ for ventilated designs.

## Series-Multiple Windings

Series-multiple windings consist of two similar coils in each winding that can be connected in series or parallel (multiple). Transformers with series-multiple windings are designated with an " $x$ " or "/" between the voltage ratings, such as voltages of " $120 / 240$ " or " $240 \times 480$." If the series-multiple winding is designated by an " $x$," the winding can be connected only for a series or parallel. With the "/" designation, a mid-point also becomes available in addition to the series or parallel connection. As an example, a $120 \times 240$ winding can be connected for either 120 (parallel) or 240 (series), but a 120/240 winding can be connected for 120 (parallel), or 240 (series), or 240 with a 120 mid-point.

For additional information, please refer to Section 2.7
Page V2-T2-191

## Sound Levels

All Eaton 600 volt class general-purpose dry-type distribution transformers are designed to meet NEMA ST-20 sound levels listed here. These are the sound levels measured in a soundproof environment Actual sound levels measured at an installation
will likely be higher (as much as 15 dB greater) due to electrical connections and environmental conditions. Lower sound levels are available and should be specified when the transformer is going to be installed in an area where sound may be a concern

## Average Sound Levels

| Equivalent Winding kVA Range | Self-Cooled Ventilated (up to 1.2 kV ) |  | Encapsulated (up to 1.2 kV) |

## K-Factor

## Product Description

A common industry term for the amount of harmonics produced by a given load is the K-factor. The larger the K-factor, the more harmonics are present. Linear loads, for example, have a K-factor of 1 . Transformers may carry a K-factor rating to define the transformer's ability to withstand the additional heating generated by harmonic currents.

## Calculating the $K$-Factor

All nonlinear waveforms can be broken down mathematically into a fundamental frequency and its harmonics. IEEE C57.110 establishes a direct relationship between these harmonics and transformer heating. Underwriters Laboratories has established a similar relationship, the K -factor, which is derived by summing the square of the percentage current at a given harmonic level multiplied by the square of the harmonic order.
$K={ }^{2}(\mathrm{~h})^{2}(\mathrm{~h})^{2}$
lh $=$ Percent Current at Harmonic $h$
h = Harmonic Order, i.e., 3rd, 5th, 7th

For example, a load that is $90 \%$ of the fundamental, $30 \%$ of the third harmonic, and $20 \%$ of the fifth harmonic would yield $(.9)^{2}(1)^{2}+(.3)^{2}(3)^{2}$ $+(.2)^{2}(5)^{2}$ or a K-factor of 2.62. This load would require an Eaton KT-4 transformer with a K-factor rating of 4.

Transformers that carry a K-factor rating define the
transformer's ability to withstand a given harmonic load while operating within the transformer's insulation class.

An analysis of harmonic loads and a calculation of the K-factor must be made to properly apply transformers in any building or facility. Note that the calculated K-factor is not constant because nonlinear loads change throughout the day as equipment and lighting is turned off and on. These harmonic loads also change over the life of the building or facility as equipment is added or removed.

## Harmonic Currents

Harmonic currents are found in nonlinear loads. These currents are generated by various types of equipment including switching mode power supplies that abruptly switch current on and off during each line cycle. Switching mode power supplies or diode-capacitor power supplies convert AC line voltage to low voltage DC. This process is accomplished by charging capacitors during each line cycle with narrow pluses of current that are timecoincident with line voltage peaks. Examples of this equipment include electronic ballasts for fluorescent lighting, personal computers, printers, fax machines, electronic and medical test equipment, uninterruptible power supplies, and solid-state motor drives.

Note: Nonlinear is synonymous with the term non-sinusoidal.

Harmonic Currents Found in Nonlinear Loads Cause Wave Shape Distortion and Create Added Stresses on Transformers

## Features, Benefits and Functions

- 600 volt class standard
- Three-phase, 480 delta208Y/120 volt standard
- Single-phase, $240 \times 480$ volt-120/240 volt standard
- $150^{\circ} \mathrm{C}$ rise standard, $80^{\circ} \mathrm{C}$ and $115^{\circ} \mathrm{C}$ available
- Three-phase neutrals sized for $200 \%$ of rated current
- Electrostatic shield

Note: Electrostatic shields do not reduce harmonic levels. However, because of the nature of switching mode loads, these shields do reduce transient noise in the system, which may affect sensitive computer loads.

- Aluminum windings (copper optional)
- Class $220^{\circ} \mathrm{C}$ insulation
- Reduced core flux density

Note: Reduced core flux prevents the core from saturation and overheating due to voltage distortions caused by harmonic currents.

- Indoor enclosures (weathershields optional, for outdoor applications)
- Coils designed to minimize stray losses
- K4, K13 standard
- K9, K20, K30, K40, K50 optional
- Low sound level (-3 dB, -5 dB ) available as options
- Available with NEMA TP-1 efficiency levels

## Standards and Certifications

- UL listed

## Industry Standards

All Eaton dry-type distribution and control transformers are built and tested in accordance with applicable NEMA, ANSI and IEEE Standards. All 600 volt class transformers are UL listed unless otherwise noted.

## Seismically Qualified

Eaton manufactured dry-type distribution transformers are seismically qualified and exceed requirements of the Uniform Building Code (UBC), International Building Code (IBC) and California Code Title 24.

Catalog Number Selection

Notes
(1) Weights subject to change.

For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton. Frame drawings/dimensions information begins on Page V2-T2-216.

## Accessories

Please refer to Section 2.7 Page V2-T2-191.

## Technical Data and Specifications

## Frequency

Eaton standard dry-type distribution transformers are designed for 60 Hz operation. Transformers required for other frequencies are available and must be specifically designed.

## Overload Capability

Short-term overload is designed into transformers as required by ANSI. Dry-type distribution transformers will deliver 200\% nameplate load for one-half hour, $150 \%$ load for one hour, and 125\% load for four hours without being damaged, provided that a constant $50 \%$ load precedes and follows the overload. See ANSI C57.96-01.250 for additional limitations.

Continuous overload capacity is not deliberately designed into a transformer because the design objective is to be within the allowed winding temperature rise with nameplate loading.

Insulation System and Temperature Rise
Industry standards classify insulation systems and rise as shown below:

Insulation System
Classification

|  | + <br> Winding | + <br> Hot <br> Spot | $=$ <br> Temp. <br> Class |
| :--- | :--- | :--- | :--- |
| $40^{\circ} \mathrm{C}$ | $55^{\circ} \mathrm{C}$ | $10^{\circ} \mathrm{C}$ | $105^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $80^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ |
| $25^{\circ} \mathrm{C}$ | $135^{\circ} \mathrm{C}$ | $20^{\circ} \mathrm{C}$ | $180^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $115^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $185^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $220^{\circ} \mathrm{C}$ |

The design life of transformers having different insulation systems is the same-the lower-temperature systems are designed for the same life as the higher-temperature systems.

## Enclosures

Eaton ventilated transformers, Type KT, use a NEMA 2 rated (drip-proof) enclosure as standard, and are rated NEMA 3R with the addition of weathershields.

## Winding Terminations

Primary and secondary windings are terminated in the wiring compartment. Ventilated transformers have leads brought out to aluminum pads that are predrilled to accept Cu/Al lugs.
Lugs are not supplied with these transformers. Eaton recommends that external cables be rated $75^{\circ} \mathrm{C}$ for ventilated designs.

## Sound Levels

All Eaton 600 volt class general-purpose dry-type distribution transformers are designed to meet NEMA ST-20 sound levels listed here. These are the sound levels measured in a soundproof environment. Actual sound levels measured at an installation will likely be higher due to electrical connections and
environmental conditions Lower sound levels are available and should be specified when the transformer is going to be installed in an area where sound may be a concern.

For additional information, please refer to Section 2.7 Page V2-T2-195.

## Average Sound Levels

NEMA ST-20 Average Sound Level, dB

## NEMA Premium ${ }^{\circledR}$ Efficient Transformers

## Product Description

Note: The following pages provide listings for most standard transformer ratings and catalog numbers. For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton.

## Types DS-3, DT-3

- Ventilated, NEMA 2 enclosure standard
- Suitable for indoor applications, outdoors when weathershields are also installed
- Upright mounting only
- $220^{\circ} \mathrm{C}$ insulation system
- $150^{\circ} \mathrm{C}$ rise standard; $115^{\circ} \mathrm{C}$ or $80^{\circ} \mathrm{C}$ rise optional
- Available in single-phase ratings $15-167 \mathrm{kVA}$, 600 volts primary (DS-3)
- Available in three-phase ratings $15-1000 \mathrm{kVA}$ and up to 600 volts primary (DT-3)

## Application Description

NEMA Premium Efficient compliant energy-efficient transformers are specifically designed to meet the energy efficiency standards set forth in NEMA publication "NEMA Premium Efficiency Transformer Program Guidelines." Surveys have shown that the average loading of low voltage dry-type distribution transformers, over a 24 -hour period, is approximately $35 \%$. NEMA Premium compliant transformers are optimized to offer maximum efficiency at $35 \%$ of nameplate rating.

The range of products covered by NEMA Premium Efficient are:

NEMA Premium Efficient Product Range

| Rating | Voltage <br> Class | Voltage |
| :--- | :--- | :--- |
| Dry-Type | Single-phase | $15-333$ kVA |
| Rating | Three-phase | $15-1000 \mathrm{kVA}$ |

Transformers that are currently specifically excluded from the scope of NEMA Premium Program include:

- Liquid-filled transformers below 10 kVA
- Dry-type transformers below 15 kVA
- AC and DC drives transformers
- Rectifier transformers designed for high harmonics
- Autotransformers
- Non-distribution transformers, such as UPS transformers
- Special impedance or regulation transformers
- Regulating transformers
- Sealed and non-ventilated transformers
- Machine tool transformers
- Welding transformers
- Transformers with tap ranges greater than 15\%
- Transformers with a frequency other than 60 Hz
- Grounding transformers
- Testing transformers

NEMA Premium Efficient Efficiency Levels

| Singl | e-Phase | Three- | Phase |

| 75 | 98.95 | 112.5 | 98.74 |
| 100 | 99.02 | 150 | 98.81 |
| 167 | 99.09 | 225 | 98.95 |
| 250 | 99.16 | 300 | 99.02 |
| 333 | 99.23 | 500 | 99.09 |
| - | - | 750 | 99.16 |
| - | - | 1000 | 99.23 |

Transformers
NEMA Premium and E3 Super Efficient Transformers

## Features, Benefits <br> and Functions

- 60 Hz operation (except as noted)
- Short-term overload capability as required by ANSI
- Meet NEMA ST-20 sound levels
- Exceed federal energy efficiency requirements for low voltage dry-type distribution transformers effective as of January 1, 2007

## Standards and Certifications

- UL listed

## UL <br> Listed

## Industry Standards

All Eaton dry-type distribution and control transformers are built and tested in accordance with applicable NEMA, ANSI and IEEE Standards. All 600 volt class transformers are UL listed unless otherwise noted.

## Seismically Qualified

Eaton manufactured dry-type distribution transformers are seismically qualified and exceed requirements of the Uniform Building Code (UBC), International Building Code (IBC) and California Code Title 24.

## Catalog Number Selection

Please refer to Section 2.7 Page V2-T2-187.

## E3 Super Efficient Transformers

## Product Description

Note: The following pages provide listings for most standard transformer ratings and catalog numbers. For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton.

## Types DS-3, DT-3

- Ventilated, NEMA 2 enclosure standard
- Suitable for indoor applications, outdoors when weathershields are also installed
- Upright mounting only
- $220^{\circ} \mathrm{C}$ insulation system
- $150^{\circ} \mathrm{C}$ rise standard; $115^{\circ} \mathrm{C}$ or $80^{\circ} \mathrm{C}$ rise optional
- Available in single-phase ratings 15-167 kVA, 600 volts primary (DS-3)
- Available in three-phase ratings 15-1000 kVA and up to 600 volts primary (DT-3)

## Application Description

## E3 CSL3-2007energy-

 efficient transformers are specifically designed to meet the energy efficiency guidelines as intended in the U.S. Department of Energy 10 CFR Parts 430 and 431, dated October 12, 2007. Surveys have shown that the average loading of low voltage dry-type distribution transformers, over a 24 -hour period, is approximately $35 \%$. E3 Efficient transformers are optimized to offer maximum efficiency at $35 \%$ of nameplate rating.Additional clarifications regarding CSL3-2007 can be found in NEMA's whitepaper "Clarifications on the Use of Department of Energy Design-Line 6, 7 and 8 transformers contained within 10 CFR 430 and 431."
The range of products covered by E3 Efficient are:

E3 Efficient Product Range

|  | Voltage <br> Rating | Voltase |
| :--- | :--- | :--- |
| Dry-Type | Single-phase | $15-333 \mathrm{kVA}$ |
| Rating | Three-phase | $15-1000 \mathrm{kVA}$ |

Transformers that are excluded from the scope of E3 Efficient transformers include:

- Liquid-filled transformers below 10 kVA
- Dry-type transformers below 15 kVA
- AC and DC drives transformers
- Rectifier transformers designed for high harmonics
- Autotransformers
- Non-distribution transformers, such as UPS transformers
- Special impedance or regulation transformers
- Regulating transformers
- Sealed and non-ventilated transformers
- Machine tool transformers
- Welding transformers
- Transformers with tap ranges greater than 15\%
- Transformers with a frequency other than 60 Hz
- Grounding transformers
- Testing transformers

## Features, Benefits

and Functions

- 60 Hz operation (except as noted
- Short-term overload capability as required by ANSI
- Meet NEMA ST-20 sound levels
- Meet or exceed federal energy efficiency requirements for low voltage dry-type distribution transformers as intended in U.S. DOE Document 10 CFR Parts 430 and 431, dated October 12, 2007.

## Standards and Certifications

- UL listed

## Industry Standards

All Eaton dry-type distribution and control transformers are built and tested in accordance with applicable NEMA, ANSI and IEEE Standards. All 600 volt class transformers are UL listed unless otherwise noted.

## Seismically Qualified

Eaton manufactured dry-type distribution transformers are seismically qualified and exceed requirements of the Uniform Building Code (UBC), International Building Code (IBC) and California Code Title 24.

## Product Description

Note: The following pages provide listings for most standard transformer ratings and catalog numbers. For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton.

The electrical transformer has been a staple of electrical power systems for the past $100+$ years. While the types of electrical loads that are being added to our systems today have radically changed, the transformer has stayed relatively the same in design during this time frame. Eaton's harmonic mitigating transformer (HMT) represents the evolution of the transformer into something that will best provide clean, energyefficient electricity to power the loads of today and tomorrow. The recent shift of our electrical loads from predominately AC consumers (resistive heating elements, incandescent lighting, three-phase motor load) to DC consumers (such as computers, fax machines,
printers, down to the "wall-wart" that recharges the cell phone) requires that our electrical infrastructure changes as well. These new loads now introduce other currents and frequencies into our electrical power systems-commonly known as "harmonics." Harmonic currents can cause additional heating, which may cause transformers, generators and conductors to become overloaded. Excessive heat is one of the major reasons that standard transformers and conductors fail prematurely. These harmonic currents have various other effects (such as "loss of ride-through capability," reduced lifespan and mysterious misoperation of equipment) on the components and loads of an electrical distribution system. Eaton's HMTs, when used properly within an electrical system, will help keep the loads operating the way the manufacturer designed them and keep the facility's electrical system free from voltage distortion.

## Three-Phase, Type DT-3 HMT, 60 Hz

- Harmonic mitigating (cancellation) transformers are a cost-effective means of treating harmful harmonics in an electrical distribution system
- Reducing harmonic content in electrical systems can result in a more reliable electrical system, lower maintenance costs, less downtime, fewer equipment malfunctions, and lower cooling system capacity
- Available in a variety of phase-shift configurations that allow flexibility to target specific families of harmonics
- Harmonic treatment via electromagnetic flux cancellation
- May be installed as a stand-alone transformer, or included in IFS ${ }^{\text {TM }}$
- Available in three-phase ratings, 15-500 kVA, up to 600 volts primary

## Features and Benefits

- 480 volt to $208 / 120$ volt standard. Additional voltage combinations available
- $150^{\circ} \mathrm{C}, 115^{\circ} \mathrm{C}$ or $80^{\circ} \mathrm{C}$ temperature rise available
- Copper windings and terminals standard; aluminum available
- Meet or exceed NEMA TP-1 energy-efficiency level
- 200\% rated neutral
- Single electrostatic shield for attenuation of common mode and transverse mode noise
- Approximately $98 \%$ efficient when operated in systems with $100 \%$ nonlinear load profiles
- $220^{\circ} \mathrm{C}$ insulation system
- Third-party tested for harmonic performance and energy efficiency
- Meet NEMA ST-20 sound standards
- Eliminate circulating harmonic currents in primary windings of transformers
- Enclosures are NEMA 2 drip-proof. The addition of optional weather-shields makes the enclosure NEMA 3R rainproof
- Harmonic cancellation via electromagnetic flux cancellation. Filters, capacitors or other such devices are not used
- Help meet IEEE 519 harmonic limits

## Standards and Certifications

- UL listed

## Industry Standards

All Eaton dry-type transformers are built and tested in accordance with applicable NEMA, ANSI and IEEE standards. Harmonic mitigating transformers are UL listed.

## IEEE 519-1992

Proper use of Eaton's harmonic mitigating transformers within your electrical system will help you to meet the harmonic distortion limits as proposed by IEEE 519-1992,
"IEEE Recommended
Practices and Requirements
for Harmonic Control in Electrical Power Systems."

## Seismic Qualified

Eaton dry-type distribution transformers are seismically qualified and exceed the requirements of the Uniform Building Code (UBC), International Building Code (IBC) and California Code Title 24.

## Note

Frame drawings/dimensions information begins on Page V2-T2-216

## Accessories

Harmonic mitigating transformers are available
with the same options and accessories as generalpurpose ventilated transformers. Please refer to Section 2.7
Page V2-T2-191.

## Technical Data and Specifications

## Frequency

Eaton standard dry-type distribution transformers are designed for 60 Hz operation. Transformers required for other frequencies are available and must be specifically designed.

## Overload Capacity

Short-term overload is designed into transformers as required by ANSI. Dry-type distribution transformers will deliver $200 \%$ nameplate load for one-half hour; $150 \%$ load for one hour and $125 \%$ load for four hours without being damaged, provided that a constant 50\% load precedes and follows the overload. See ANSI C57.96-01.250 for additional limitations.

Continuous overload capacity is not deliberately designed into a transformer because the design objective is to be within the allowed winding temperature rise with nameplate loading.

## Insulation System and Temperature Rise

Industry standards classify insulation systems and rise as shown below:

Insulation System
Classification

|  | + <br> Winding <br> Rise | + <br> Hot <br> Spot | $=$ <br> Temp. <br> Class |
| :--- | :--- | :--- | :--- |
| Ambient | $55^{\circ} \mathrm{C}$ | $10^{\circ} \mathrm{C}$ | $105^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $80^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $135^{\circ} \mathrm{C}$ | $20^{\circ} \mathrm{C}$ | $180^{\circ} \mathrm{C}$ |
| $25^{\circ} \mathrm{C}$ | $115^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $185^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $220^{\circ} \mathrm{C}$ |  |
| $40^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $30^{\circ}$ |  |

The design life of transformers having different insulation systems is the same-the lower-temperature systems are designed for the same life as the higher-temperature systems.

## Enclosures

Eaton ventilated transformers Types DS-3 and DT-3 use a NEMA 2 rated (drip-proof) enclosure as a standard, and are rated NEMA 3R with the addition of weathershields.

## Sound Levels

All Eaton 600 volt class general-purpose dry-type distribution transformers are designed to meet

## Average Sound Levels

## Note

For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton.

## Demystifying Harmonic Mitigating Transformer Myths

## Aren't "power factor corrected" computer power supplies fixing all harmonics?

The use of power factor corrected computer power supplies is a great first start to reducing harmonic currents in your facility. These are becoming prevalent in server applications, but have not "crossed-over" into the laptop computer/business computer. Remember also that, once the computer power supply harmonics are addressed, you will still need to address the harmonic currents coming from the variety of other equipment in your facility.

## Don't K-rated transformers fix harmonics?

The K-rated transformer was created to address the additional heat being produced by standard deltawye transformers when feeding nonlinear loads. The goal of the K-rated transformer is to dissipate the heat produced over a larger area, thus providing the illusion of correction. The K-rated transformer does nothing to reduce the root issue of harmonic currents or correct power quality issues. Because of their larger size, they also consume additional energy to "do the same work" and are counter-productive to an energy-efficient electrical distribution design.

## Don't you need two HMTs for any correction to occur?

The design of HMTs allows them to address different families of harmonic currents in different ways. A single HMT will treat the triplen (3rd, 9th, 15th and so on) harmonic currents in its secondary winding. The 5th, 7th, 17th and 19th harmonic family is treated on a system basis through a technique known as "phase shifting."

This phase shift does occur between the Type NON and Type THR, and the Type POS and Type NEG harmonic mitigating transformers-and this can also occur between a Type NON and a standard delta-wye transformer (that is probably already existing within your facility). See our Sample HMT Applications area for additional information.

## The cost of HMTs is too high!

While the initial cost of HMTs is typically 1.5 to 4 times the cost of a standard transformer (due to the additional design, materials and labor involved in creating the magnetics necessary to reduce harmonic impact)-to not use an HMT in a harmonic environment will actually cost you $250 \%$ more energy loss in the transformer. Due to the relatively long life of a transformer (20-30 years), these additional energy costs easily overshadow the initial one-time first cost increment.

## If I use one HMT, don't I need to change all my transformers?

Most facilities have only a percentage (typically 20-25\%) of their electrical system that really requires the use of an HMT. This means in a typical building that only a few areas are either critical (meaning high requirements for "clean" power) or have high concentrations of electronic, nonlinear loads-requiring the use of the HMT in those specific areas. The harmonic mitigating transformer is a weapon in your arsenal in providing a complete, properly designed electrical system for today and tomorrow.

## Transformer Technology Table Explanation

In understanding the product placement of the HMT, it becomes useful to have some "rule of thumb" understanding to compare products. Looking at one of the aspects of an HMT-price-you can see that, if a standard delta-wye transformer had a cost of one unit, a K-13 transformer would cost about double and an HMT would cost 1.5 to 4 times the unit cost. What's impressive to compare is the next column of information"Energy Savings." If the amount of energy used to power today's loads is compared against a standard delta-wye transformer (that was never designed to feed today's types of loads), you can easily see that the HMT is designed to meet the issue head-on! Referring to the table's information, you can see that it would take 30\% more energy to power the same computer loads with a K-13 transformer, whereas an HMT would take 25\% less energy to feed those same

## Transformer Technology Comparison (1)

| Transformer Type | Cost | Energy Savings | Power Quality |
| :--- | :--- | :--- | :--- |
| Standard delta-wye | if 1X | if 1X | Not designed for harmonics |
| K-13 | $1.5-2 \mathrm{X}$ | -0.3 X | Bulked up-doesn't help |
| HMT | 2.5 X | 2.5 X | Corrects root issue |

Note
(1) Comparing cost, energy savings and power quality performance between the "commonly used" transformer types.

## Sample HMT Applications

Typical Application of Type NON Transformer

Installation of a Type NON transformer provides an effective treatment of triplen (3rd, 9th, 15th and so on) harmonic currents that are generated by loads connected to the transformer. Triplen harmonic currents are treated in the secondary windings of the transformer due to the transformer's low zero sequence impedance. Type NON transformers do not need to be used in combination with other transformers to treat triplen harmonic currents. A single Type NON transformer may be installed, or multiple units can be applied.

Typical Application of Type NON Transformer with a Standard Delta-Wye Transformer

When a delta-wye transformer exists in an electrical distribution system, the addition of a Type NON transformer offers an economical solution for treating harmonic currents. The $30^{\circ}$ phase-shift created between a Type NON harmonic mitigating transformer and a delta-wye transformer (standard transformer or K-Factor transformer) provides treatment of 5th, 7th, 17th and 19th harmonic currents. These harmonic currents are canceled in the common electrical bus that feeds the transformers. Additionally,
triplen (3rd, 9th, 15th and so on) harmonic currents generated by the loads connected to the Type NON transformer will be treated in the secondary windings of the Type NON transformer due to its low zero sequence impedance. When using two or more transformers to treat harmonics, it is better that the load be split equally between the transformers to receive the maximum benefit.

Note: Triplen currents will still circulate in the delta-wye transformer for additional waste. See figure on Page V2-T2-92 to correct.

Optimum Application of Type NON and Type THR Transformers

When you're searching for an optimum harmonic correction solution in an electrical distribution system, the combination of a Type NON and Type THR transformer offers a great solution. The $30^{\circ}$ phase shift created between Type NON and type THR harmonic mitigating transformers provides treatment of 5th, 7th, 17th and 19th harmonic currents. These harmonic currents are canceled in the common electrical bus that feeds the transformers. Additionally,
triplen (3rd, 9th, 15th and so on) harmonic currents generated by the loads will be treated in the secondary windings of HMTs. This will ensure that these currents will not circulate in the primary of the transformer creating additional heat, voltage distortion and wasted energy loss. When using two or more transformers to treat harmonics, it is better that the load be split equally between the transformers to receive the maximum benefit.

Typical Application of Type NEG and Type POS Transformers

The combination of a Type POS (+ $15^{\circ}$ phase-shift) transformer and a Type NEG ( $-15^{\circ}$ phase-shift) transformer effectively treats 5th, 7th, 17th and 19th harmonic currents. These harmonic currents are canceled in the common electrical bus that feeds the transformers.
Additionally, triplen (3rd, 9th, 15th and so on) harmonic

## Product Description

Note: The following pages provide listings for most standard transformer ratings and catalog numbers. For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton.

## Type EP and EPT

- Encapsulated design
- Suitable for indoor or outdoor applications
- Totally enclosed, nonventilated enclosures
- Enclosures are NEMA 3R rated
- Mountable in any position indoors and upright-only outdoors
- $180^{\circ} \mathrm{C}$ insulation system
- $115^{\circ} \mathrm{C}$ rise standard; $80^{\circ} \mathrm{C}$ optional
- Available in ratings through 37.5 kVA single-phase 75 kVA three-phase

Application Description
The basic purpose of a transformer is voltage transformation as near as practically possible to the load for economy and distribution of power. Typical loads for dry-type distribution transformers include lighting, heating, air conditioners, fans and machine tools. Such loads are found in commercial, institutional, industrial and residential structures.

## Features, Benefits and Functions

- 60 Hz operation (50/60 Hz optional)
- Short-term overload capability as required by ANSI
- Meet NEMA ST-20 sound levels

## Standards and Certifications <br> - UL listed <br> - CSA certified <br> 

## Industry Standards

All Eaton dry-type distribution and control transformers are built and tested in accordance with applicable NEMA, ANSI and IEEE Standards. All 600 volt class transformers are UL listed unless otherwise noted.

## Seismically Qualified

Eaton manufactured dry-type distribution transformers are seismically qualified and exceed requirements of the Uniform Building Code (UBC), International Building Code (IBC), and California Code Title 24

## Accessories

Please refer to Section 2.7 Page V2-T2-191.

## Technical Data and Specifications

## Frequency

Eaton standard dry-type distribution transformers are designed for 60 Hz operation. Transformers required for other frequencies are available and must be specifically designed.

## Overload Capability

Short-term overload is designed into transformers as required by ANSI. Dry-type distribution transformers will deliver 200\% nameplate load for one-half hour, $150 \%$ load for one hour and $125 \%$ load for four hours without being damaged, provided that a constant $50 \%$ load precedes and follows the overload. See ANSI C57.96-01.250 for additional limitations.

Continuous overload capacity is not deliberately designed into a transformer because the design objective is to be within the allowed winding temperature rise with nameplate loading.

## Insulation System and Temperature Rise

Industry standards classify insulation systems and rise as shown below:

Insulation System
Classification

|  | + <br> Winding <br> Rise | + <br> Hot <br> Spot | $=$ <br> Temp. <br> Class |
| :--- | :--- | :--- | :--- |
| $40^{\circ} \mathrm{C}$ | $55^{\circ} \mathrm{C}$ | $10^{\circ} \mathrm{C}$ | $105^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $80^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ |
| $25^{\circ} \mathrm{C}$ | $135^{\circ} \mathrm{C}$ | $20^{\circ} \mathrm{C}$ | $180^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $115^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $185^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $220^{\circ} \mathrm{C}$ |

The design life of transformers having different insulation systems is the same-the lower-temperature systems are designed for the same life as the higher-temperature systems.

## Enclosures

Eaton encapsulated transformers, Types EP and EPT, use a NEMA 3R rated enclosure as standard. NEMA 4 X enclosures (grade 304 or 316 stainless steel) are available as an option.

## Winding Terminations

Primary and secondary windings are terminated in the wiring compartment Encapsulated units have copper leads or stabs brought out for connections. Ventilated transformers have leads brought out to aluminum pads that are predrilled to accept Cu/Al lugs.
Lugs are not supplied with these transformers. Eaton recommends that external cables be rated $90^{\circ} \mathrm{C}$ (sized at $75^{\circ} \mathrm{C}$ ampacity) for encapsulated designs and $75^{\circ} \mathrm{C}$ for ventilated designs.

## Series-Multiple Windings

Series-multiple windings consist of two similar coils in each winding that can be connected in series or parallel (multiple). Transformers with series-multiple windings are designated with an " $x$ " or "/" between the voltage ratings, such as voltages of " $120 / 240$ " or " $240 \times 480$." If the series-multiple winding is designated by an " $x$," the winding can be connected only for a series or parallel. With the "/" designation, a mid-point also becomes available in addition to the series or parallel connection. As an example, a $120 \times 240$ winding can be connected for either 120 (parallel) or 240 (series), but a 120/240 winding can be connected for 120 (parallel), 240 (series) or 240 with a 120 mid-point.

## Sound Levels

All Eaton 600 volt class general-purpose dry-type distribution transformers are designed to meet NEMA ST-20 sound levels listed here. These are the sound levels measured in a soundproof environment. Actual sound levels measured at an installation will likely be higher due to
electrical connections and environmental conditions. Lower sound levels are available and should be specified when the transformer is going to be installed in an area where sound may be a concern.

For additional information, please refer to Section 2.7
Page V2-T2-195.

## Average Sound Levels

| Equivalent Winding kVA Range | Self-Cooled Ventilated (up to 1.2 kV ) |  | Encapsulated (up to 1.2 kV) |

## Motor Drive Isolation Transformers

## Product Description

Note: The following pages provide listings for most standard transformer ratings and catalog numbers. For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton.

- Suitable for indoor or outdoor applications (with weathershield)
- Ventilated enclosures
- $220^{\circ} \mathrm{C}$ insulation system
- $150^{\circ} \mathrm{C}$ rise standard (self extinguishing), $115^{\circ} \mathrm{C}$ or $80^{\circ} \mathrm{C}$ rise optional
- Available in ratings from 7.5 through 1500 kVA

## Application Description

Drive isolation transformers are specifically designed for use with AC and DC adjustable speed drives. Two winding drive isolation transformers provide:

- Electrical isolation between the incoming line and the drive circuitry
- Voltage conversion of input line to standard drive input voltages
- Minimized line disturbances caused by SCR (silicon controlled rectifiers) firing
- Reduced short-circuit currents and voltage line transients
Drive isolation transformers are specifically sized to the drive KVA requirements and are braced to withstand the mechanical stresses of current reversals and short circuits associated with SCR drives.

## Features, Benefits and Functions

- 60 Hz operation ( $50 / 60 \mathrm{~Hz}$ operation available)
- Short-term overload capability as required by ANSI
- Primary and secondary terminals are front accessible for fast and easy connection
- Slotted screw mounting holes in enclosure and cover reduce installation time
- Sound dampening pads, which isolate the core and coil from the case, reduce noise levels to meet NEMA ST-20
- Core laminations of precision sheared silicon steel are hand stacked to ensure quiet operation
- Terminations are clearly marked for easy identification
- Three-phase transformers have one $5 \%$ full capacity tap above and below nominal voltage for incoming source adjustment
- Units are suitable for continuous operation in a $40^{\circ} \mathrm{C}$ ambient maximum
- Full current neutral
- Thermoguard protection embedded in coils of threephase models to indicate that high temperatures (approximately $190^{\circ} \mathrm{C}$ ) are present. Thermoguards consist of a set of NO dry contacts
- Three coil delta-wye configurations are used throughout the product line

## Standards and Certifications

- ANSI C89.2
- NEMA ST-20
- UL 506
- UL 1561

## Seismic Qualified

All Eaton manufactured drytype distribution transformers are seismically qualified and exceed requirements of the International Building Code (IBC) and California Code Title 24.

## Catalog Number Selection

Please refer to Section 2.7 Page V2-T2-187

Note

[^13]
## Accessories

- Copper windings
- Non-standard voltages
- $50 / 60 \mathrm{~Hz}$ designs
- Delta-delta configuration
- $80^{\circ} \mathrm{C}$ or $115^{\circ} \mathrm{C}$ rise designs
- Encapsulated designs (up to 34 kVA ). Thermoguards are not available on encapsulated designs
- Totally enclosed non-ventilated
- Electrostatic shields

Please refer to Section 2.7 Page V2-T2-191.

## Technical Data and Specifications

## Frequency

Eaton standard dry-type distribution transformers are designed for 60 Hz operation. Transformers required for other frequencies are available and must be specifically designed.

## Overload Capability

Short-term overload is designed into transformers as required by ANSI. Dry-type distribution transformers will deliver 200\% nameplate load for one-half hour, $150 \%$ load for one hour and $125 \%$ load for four hours without being damaged, provided that a constant $50 \%$ load precedes and follows the overload. See ANSI C57.96-01.250 for additional limitations.
Continuous overload capacity is not deliberately designed into a transformer because the design objective is to be within the allowed winding temperature rise with nameplate loading.

## Insulation System and Temperature Rise

Industry standards classify insulation systems and rise as shown below:

Insulation System
Classification

|  | + <br> Winding <br> Rise | + <br> Hot <br> Spot | $=$ <br> Temp. <br> Class |
| :--- | :--- | :--- | :--- |
| $40^{\circ} \mathrm{C}$ | $55^{\circ} \mathrm{C}$ | $10^{\circ} \mathrm{C}$ | $105^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $80^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ |
| $25^{\circ} \mathrm{C}$ | $135^{\circ} \mathrm{C}$ | $20^{\circ} \mathrm{C}$ | $180^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $115^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $185^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $220^{\circ} \mathrm{C}$ |

The design life of transformers having different insulation systems is the same-the lower-temperature systems are designed for the same life as the higher-temperature systems.

## Enclosures

Eaton ventilated transformers, Type MD, use a NEMA 2 rated (drip-proof) enclosure as standard, and are rated NEMA 3R with the addition of weathershields.

## Winding Terminations

Primary and secondary windings are terminated in the wiring compartment. Ventilated transformers have leads brought out to aluminum pads that are predrilled to accept Cu/Al lugs.
Lugs are not supplied with these transformers. Eaton recommends that external cables be rated $75^{\circ} \mathrm{C}$ for ventilated designs.

## Sound Levels

All Eaton 600 volt class general-purpose dry-type distribution transformers are designed to meet NEMA ST-20 sound levels listed here. These are the sound levels measured in a soundproof environment. Actual sound levels measured at an installation will likely be higher due to electrical connections and environmental conditions. Lower sound levels are available and should be specified when the transformer is going to be installed in an area where sound may be a concern.
For additional information,
please refer to Section 2.7
Page V2-T2-195.

## Average Sound Levels

| NEMA ST-20 Average Sound Level, dB |  |  |  |

## Application Description

A mini-power center combines three individual components into one NEMA Type 3R enclosure: a main breaker, an encapsulated single-phase (Type EP) or three-phase (EPT) dry-type transformer, and a secondary distribution loadcenter with main breaker. Interconnecting wiring is completed at the factory. Mini-power centers are used wherever there is a 480 volt or 600 volt distribution system and loads requiring 208Y/120 volt, three-phase or 120/240 volt single-phase. Typical installations include:

- Industrial plant
assembly lines
- Plant expansions
- Test equipment
- Temporary construction site power
- Sewage disposal plants
- Warehouses
- Car washes
- Parking lots
- Commercial buildings

## Features, Benefits and Functions

- 60 Hz operation
- Indoor/outdoor, NEMA 3R
- Primary main breaker
- Secondary main breaker (Type BR plug-in and Type BAB bolt-on feeder breakers not included)
- All live parts enclosed for personnel safety
- Cover is hinged to prevent removal and can be padlocked
- Cores are grounded with a copper lead
- Ground bar is supplied to permit grounding of individual secondary circuits
- Neutral bar is grounded to case
- Feeder circuits can be easily added or changed using Type BR plug-in breakers and Type BR plugin and Type BAB bolt-on
- Suitable for service entrance
- Wide range of configurations available:
- Aluminum windings and plug-in loadcenter chassis standard
- Copper windings and plug-in loadcenter chassis also available
- Copper windings and bolt-on loadcenter chassis available
- Short-term overload capability as required by ANSI
- Meet NEMA ST-20 sound levels

Transformers
Distribution Transformers

## Standards and Certifications

- UL listed
- $\operatorname{CSA}{ }^{\circledR}$ certified

## Industry Standards

All Eaton dry-type distribution and control transformers are built and tested in accordance with applicable NEMA,
ANSI and IEEE Standards. All 600 volt class transformers are UL listed unless otherwise noted.

## Seismically Qualified

Eaton manufactured dry-type distribution transformers are seismically qualified and exceed requirements of the International Building Code (IBC) and California Code Title 24.

## Catalog Number Selection

Please refer to Section 2.7 Page V2-T2-187.

## Product Selection

Additional Product Selection information begins on Page V2-T2-189.

## Notes

(1) Primary breakers with higher interrupting capacity available. For HFD breaker, add suffix "H." For FD breaker, add suffix "F." For FDC breaker, add suffix "C."

Main breakers are fixed only.
(2) Combinations can be selected.
(3) Feeder breakers not included. Use Eaton's Type BR.

For 304 grade stainless steel enclosure, replace 10th character of catalog number with an "SS" suffix, e.g., P48G11S03SS, or add "SS" suffix before the addition of "CUB."
For 316 grade stainless steel enclosure, replace 10th character of catalog number with an "S6" suffix, e.g., P48G11S03S6, or add "S6" suffix before the addition of "CUB."
For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton. Frame drawings/dimensions information begins on Page V2-T2-216.

## Notes

(1) Primary breakers with higher interrupting capacity available. For HFD breaker, add suffix "H." For FD breaker, add suffix "F." For FDC breaker, add suffix "C."

Main breakers are fixed only. UL Listed only, not CSA
(2) Combinations can be selected.
(3) Feeder breakers not included. Use Eaton's Type BAB.

For 304 grade stainless steel enclosure, replace 10th character of catalog number with an "SS" suffix, e.g., P48G11SO3SS, or add "SS" suffix before the addition of "CUB."
For 316 grade stainless steel enclosure, replace 10th character of catalog number with an "S6" suffix, e.g., P48G11S03S6, or add "S6" suffix before the addition of "CUB."
For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton. Frame drawings/dimensions information begins on Page V2-T2-216.

## Distribution Transformers

## Accessories

Please refer to Section 2.7

## Page V2-T2-191.

## Technical Data and Specifications

## Frequency

Eaton standard dry-type distribution transformers are designed for 60 Hz operation. Transformers required for other frequencies must be specifically designed.

## Overload Capability

Short-term overload is designed into transformers as required by ANSI. Dry-type distribution transformers will deliver 200\% nameplate load for one-half hour, $150 \%$ load for one hour and $125 \%$ load for four hours without being damaged, provided that a constant 50\% load precedes and follows the overload. See ANSI C57.96-01.250 for additional limitations.

Continuous overload capacity is not deliberately designed into a transformer because the design objective is to be within the allowed winding temperature rise with nameplate loading.

## Insulation System and

Temperature Rise
Industry standards classify insulation systems and rise as shown below:

Insulation System
Classification

|  | + <br> Winding <br> Rise | + <br> Hot <br> Spot | $\boldsymbol{=}$ <br> Temp. <br> Class |
| :--- | :--- | :--- | :--- |
| $40^{\circ} \mathrm{C}$ | $55^{\circ} \mathrm{C}$ | $10^{\circ} \mathrm{C}$ | $105^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $80^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ |
| $25^{\circ} \mathrm{C}$ | $135^{\circ} \mathrm{C}$ | $20^{\circ} \mathrm{C}$ | $180^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $115^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $185^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $220^{\circ} \mathrm{C}$ |

The design life of transformers having different insulation systems is the same-the lower-temperature systems are designed for the same life as the higher-temperature systems.

## Winding Terminations

Eaton recommends that external cables be rated $90^{\circ} \mathrm{C}$ (sized at $75^{\circ} \mathrm{C}$ ampacity) for encapsulated designs and $75^{\circ} \mathrm{C}$ for ventilated designs.

## Sound Levels

All Eaton 600 volt class general-purpose dry-type distribution transformers are designed to meet NEMA ST-20 sound levels listed here. These are the sound levels measured in a soundproof environment. Actual sound levels measured at an installation
will likely be higher due to electrical connections and environmental conditions. Lower sound levels are available and should be specified when the transformer is going to be installed in an area where sound may be a concern.

## Average Sound Levels

| NEMA ST-20 Average Sound Level, dB |  |  |  |
| :---: | :---: | :---: | :---: |
| Equivalent Winding kVA Range | Self-Cooled Ven <br> K-Factor 1, 4, 9 | ed (up to 1.2 kV) <br> K-Factor 13, 20 | Encapsulated (up to 1.2 kV) |
| 3.00 and below | 40 | 40 | 45 |
| 3.01 to 9.00 | 40 | 40 | 45 |
| 9.01 to 15.00 | 45 | 45 | 50 |
| 15.01 to 30.00 | 45 | 45 | 50 |

Note
For other ratings or catalog numbers not shown, or for special enclosure types (including
stainless steel), refer to Eaton. The following pages provide listings for most standard
transformer ratings and styles. For all-copper and bolt-on-breaker designs, contact Eaton

## Three-Phase Type DT-3E Totally Enclosed Non-Ventilated

## Totally Enclosed Non-Ventilated Transformers

## Product Description

Note: The following pages provide listings for most standard transformer ratings and catalog numbers. For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton.

- Suitable for indoor or outdoor applications
- Totally enclosed, nonventilated enclosures rated NEMA 3R
- $220^{\circ} \mathrm{C}$ insulation system
- $150^{\circ} \mathrm{C}$ rise standard; $115^{\circ} \mathrm{C}$ or $80^{\circ} \mathrm{C}$ rise optional

## Application Description

Totally enclosed nonventilated dry-type transformers are for special applications, where because of adverse atmospheric conditions it is desirable to use a dry-type non-ventilated transformer vs. the ventilated standard unit, which has openings in its enclosure to allow air to flow directly over the core and coil.

In applications where the atmosphere contains conductive, corrosive, or combustible materials, which might damage a transformer, or lint and dust flyings that might block the ventilation passages, the non-ventilated transformer is highly suited. It has no openings in the enclosure. Heat is dissipated by radiating from the surface area of the enclosure. Consequently, the enclosures are larger than those of the standard ventilated type. Non-ventilated transformers are suited for application in the textile, chemical, automotive, petrochemical, foundry, cement, food, paper and other industries.

## Features, Benefits and Functions

- 60 Hz operation $(50 / 60 \mathrm{~Hz}$ operation available)
- Short-term overload capability as required by ANSI
- Meet NEMA ST-20 sound levels

## Standards and Certifications

- UL listed

## Industry Standards

All Eaton dry-type distribution and control transformers are built and tested in accordance with applicable NEMA, ANSI and IEEE Standards.

## Seismically Qualified

Eaton manufactured dry-type distribution transformers are seismically qualified and exceed requirements of the International Building Code (IBC) and California Code Title 24.

## Catalog Number Selection

Please refer to Section 2.7 Page V2-T2-187

## Product Selection

Additional Product Selection information begins on Page V2-T2-189.

| $40^{\circ} \mathrm{C}$ | $80^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ |
| $25^{\circ} \mathrm{C}$ | $135^{\circ} \mathrm{C}$ | $20^{\circ} \mathrm{C}$ | $180^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $115{ }^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $185^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $220^{\circ} \mathrm{C}$ |

The design life of transformers having different insulation systems is the same-the lower-temperature systems are designed for the same life as the higher-temperature systems.

## Enclosures

Eaton totally enclosed, non-ventilated transformers, Types DS-3E and DT-3E, use a NEMA 3R rated enclosure as standard.

## Winding Terminations

Primary and secondary windings are terminated in the wiring compartment Totally enclosed nonventilated transformers have leads brought out to aluminum pads that are pre-drilled to accept Cu/Al lugs. Lugs are not supplied with these transformers. Eaton recommends external cables be rated $75^{\circ} \mathrm{C}$ for ventilated designs.

## Series-Multiple Windings

Series-multiple windings consist of two similar coils in each winding that can be connected in series or parallel (multiple). Transformers with series-multiple windings are designated with an " $x$ " or "/" between the voltage ratings, such as voltages of " $120 / 240$ " or " $240 \times 480$." If the series-multiple winding is designated by an " $x$," the winding can be connected only for a series or parallel. With the "/" designation, a mid-point also becomes available in addition to the series or parallel connection. As an example, a $120 \times 240$ winding can be connected for either 120 (parallel) or 240 (series), but a 120/240 winding can be connected for 120 (parallel), or 240 (series), or 240 with a 120 mid-point.

Note: The preceding pages provide listings for most standard transformer ratings and catalog numbers. For all-copper and bolt-on-breaker designs, contact Eaton. For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton.

## Distribution Transformers

## Single-Phase Type EPZ Encapsulated

## Class I, Division 2, Hazardous Location Transformers

## Product Description

Note: The following pages provide listings for most standard transformer ratings and catalog numbers. For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton.

- Encapsulated design
- Suitable for indoor or outdoor applications
- Totally enclosed, nonventilated enclosures
- $180^{\circ} \mathrm{C}$ insulation system
- $115^{\circ} \mathrm{C}$ rise standard; $80^{\circ} \mathrm{C}$ rise optional
- Mountable in any position indoors. Upright only outdoors
- Available in ratings up to 600 volts primary, 25 kVA single-phase, 75 kVA three-phase
- Available in NEMA Type 4X enclosure

## Application Description

Type EPZ and EPTZ
transformers are labeled as
"Suitable for use in Class I, Division 2, Groups A, B, C and D locations, as defined by NEC Article 501, with NECrecommended installation procedures for dry-type transformers rated under 600 volts nominal operation."

A Class I, Division 2 location per Section 500 of the NEC is defined as:
6. A location in which volatile flammable liquids or gases are handled, processed or used, but that normally will be confined within closed containers or systems from which they can escape only in case of accidental rupture or breakdown of the container or system.
7. Or, a location where ignitable concentrations of gases or vapors are normally prevented by positive mechanical ventilation and that might become hazardous through failure of the ventilation equipment.

8. Or, a location that is adjacent to a Class I, Division 1 location and ignitable concentrations of gases or vapors might occasionally enter.

Atmospheres classified by NEC Section 500 as Group A includes acetylene. Group B includes gases such as hydrogen and formaldehyde. Group C may contain gases or vapors such as ethyl ether, ethylene, or the equivalent. Atmospheres classified as Group D may contain gases or vapors such as acetone, ammonia, benzene, butane, cyclopropane, ethanol, gasoline, hexane, methanol, methane, natural gas, naphtha, propane or the equivalent.

## Features, Benefits and Functions

- NEMA 3R enclosure
- 60 Hz operation
- Aluminum windings (copper optional)
- Short-term overload capability as required by ANSI
- Meet NEMA ST-20 sound levels

## Standards and Certifications

- UL listed

## Industry Standards

All Eaton dry-type distribution and control transformers are built and tested in accordance with applicable NEMA, ANSI and IEEE Standards.

## Seismically Qualified

Eaton manufactured dry-type distribution transformers are seismically qualified and exceed requirements of the International Building Code (IBC) and California Code Title 24.

## Catalog Number Selection

Please refer to Section 2.7 Page V2-T2-187.

## Product Selection

Additional Product Selection information begins on Page V2-T2-189.

## Enclosures

Eaton encapsulated transformers, Types EPZ and EPTZ, use a NEMA 3R rated enclosure.

## Sound Levels

All Eaton 600 volt class general-purpose dry-type distribution transformers are designed to meet NEMA ST-20 sound levels listed here. These are the sound levels measured in a soundproof environment. Actual sound levels measured at an installation will likely be higher due to electrical connections and environmental conditions. Lower sound levels are available and should be specified when the transformer is going to be installed in an area where sound may be a concern.

## Winding Terminations

Lugs are not supplied with these transformers. Eaton recommends that external cables be rated $90^{\circ} \mathrm{C}$ sized at $75^{\circ} \mathrm{C}$ ampacity) for encapsulated designs and $75^{\circ} \mathrm{C}$ for ventilated designs.

Nominal and tap leads come out of the transformer through pipe elbows. Connections should be made to an adjacent explosion-proof junction box. Unused tap leads must be properly insulated prior to energization. EPZ and EPTZ transformers are UL and cUL listed.

## Series-Multiple Windings

Series-multiple windings consist of two similar coils in each winding that can be connected in series or parallel (multiple). Transformers with series-multiple windings are designated with an "x" or "/" between the voltage ratings, such as voltages of " $120 / 240$ " or " $240 \times 480$." If the series-multiple winding is designated by an " $x$," the winding can be connected only for a series or parallel. With the "/" designation, a mid-point also becomes available in addition to the series or parallel connection. As an example, a $120 \times 240$ winding can be connected for either 120 (parallel) or 240 (series), but a 120/240 winding can be connected for 120 (parallel), 240 (series) or 240 with a 120 mid-point.

## Features, Benefits and Functions

- 60 Hz operation standard, $50 / 60 \mathrm{~Hz}$ operation available
- Short-term overload capability as required by ANSI
- Meet NEMA ST-20 sound levels

## Standards and Certifications

- UL recognized

## IN

## Industry Standards

All Eaton dry-type distribution and control transformers are built and tested in accordance with applicable NEMA, ANSI and IEEE Standards.

## Seismically Qualified

All Eaton manufactured drytype distribution transformers are seismically qualified and exceed requirements of the International Building Code and California Code Title 24.

Contact your local Eaton sales office for availability of additional open-type core and coil assemblies. Contact your local Eaton sales office for CE Mark transformer requirements. For other ratings or catalog numbers not shown, refer to Eaton. Frame drawings/dimensions information begins on Page V2-T2-216.

## Accessories

Please refer to Section 2.7 Page V2-T2-191.

## Technical Data and Specifications

## Frequency

Eaton standard dry-type distribution transformers are designed for 60 Hz operation. Transformers required for other frequencies are available and must be specifically designed.

## Overload Capability

Short-term overload is designed into transformers as required by ANSI. Dry-type distribution transformers will deliver 200\% nameplate load for one-half hour, 150\% load for one hour, and $125 \%$ load for four hours without being damaged, provided that a constant 50\% load precedes and follows the overload. See ANSI C57.96-01.250 for additional limitations.

Continuous overload capacity is not deliberately designed into a transformer because the design objective is to be within the allowed winding temperature rise with nameplate loading.

| Insulation System and Temperature Rise |  |  |  |
| :---: | :---: | :---: | :---: |
| Industry standards classify insulation systems and rise as shown below: |  |  |  |
| Insulation System Classification |  |  |  |
| Ambient | $\stackrel{+}{\text { Winding }}$ Rise | $\begin{aligned} & + \\ & \begin{array}{l} \text { Hot } \\ \text { Spot } \end{array} \end{aligned}$ | $\begin{aligned} & \overline{=} \\ & \text { Temp. } \\ & \text { Class } \end{aligned}$ |
| $40^{\circ} \mathrm{C}$ | $55^{\circ} \mathrm{C}$ | $10^{\circ} \mathrm{C}$ | $105^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $80^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ |
| $25^{\circ} \mathrm{C}$ | $135^{\circ} \mathrm{C}$ | $20^{\circ} \mathrm{C}$ | $180^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $115{ }^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $185^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $220^{\circ} \mathrm{C}$ |

The design life of transformers having different insulation systems is the same-the lower-temperature systems are designed for the same life as the higher-temperature systems.

## Winding Terminations

Lugs are not supplied with these transformers. Eaton recommends that external cables be rated $90^{\circ} \mathrm{C}$ (sized at $75^{\circ} \mathrm{C}$ ampacity) for encapsulated designs and $75^{\circ} \mathrm{C}$ for ventilated designs.

## Series-Multiple Windings

Series-multiple windings consist of two similar coils in each winding that can be connected in series or parallel (multiple). Transformers with series-multiple windings are designated with an " $x$ " or "/" between the voltage ratings, such as voltages of "120/240" or " $240 \times 480$." If the seriesmultiple winding is designated by an "x," the winding can be connected only for a series or parallel. With the "/" designation, a mid-point also becomes available in addition to the series or parallel connection. As an example, a $120 \times 240$ winding can be connected for either 120 (parallel) or 240 (series), but a 120/240 winding can be connected for 120 (parallel), 240 (series) or 240 with a 120 mid-point.

## Sound Levels

All Eaton 600 volt class general-purpose dry-type distribution transformers are designed to meet NEMA ST-20 sound levels listed here. These are the sound levels measured in a soundproof environment. Actual sound levels measured at an installation will likely be higher due to electrical connections and environmental conditions. Lower sound levels are available and should be specified when the transformer is going to be installed in an area where sound may be a concern.

For additional information, please refer to Section 2.7

## Types DS-3, DT-3

- Ventilated, NEMA 2 enclosure standard
- Suitable for indoor applications; outdoors when weathershields are also installed
- Upright mounting only
- $220^{\circ} \mathrm{C}$ insulation system
- $115^{\circ} \mathrm{C}$ rise standard; $150^{\circ} \mathrm{C}$ or $80^{\circ} \mathrm{C}$ rise optional
- Copper windings standard
- Available in single-phase ratings 15-167 kVA and up to 4160 volts primary (DS-3)
- Available in three-phase ratings 15-1500 kVA and up to 4160 volts primary (DT-3)

## Application Description

The basic purpose of a transformer is voltage transformation as near as practically possible to the load for economy and distribution of power. Typical loads for dry-type distribution transformers include lighting, heating, air conditioners, fans and machine tools. Such loads are found in commercial, institutional, industrial and residential structures.

## Features, Benefits and Functions

- Meets ABS (American Bureau of Shipping) specification
- ABS Type Approval Certificate Number 04-TP517621-X
- 60 Hz operation
- $115^{\circ} \mathrm{C}$ temperature rise standard
- Copper windings standard
- Short-term overload capability as required by ANSI
- Meet NEMA ST-20 sound levels

## Standards and Certifications

- UL listed

## Industry Standards

All Eaton dry-type distribution and control transformers are built and tested in accordance with applicable NEMA, ANSI and IEEE Standards. All 600 volt class transformers are UL listed unless otherwise noted.

Notes
(1) Suitable for installation in onshore, onboard or offshore applications.

Frame drawings/dimensions information begins on Page V2-T2-216

## Distribution Transformers

## Accessories

Please refer to Section 2.7 Page V2-T2-191.

## Technical Data and Specifications

## Frequency

Eaton standard dry-type distribution transformers are designed for 60 Hz operation. Transformers required for other frequencies are available and must be specifically designed.

## Overload Capability

Short-term overload is designed into transformers as required by ANSI. Dry-type distribution transformers will deliver 200\% nameplate load for one-half hour, $150 \%$ load for one hour, and $125 \%$ load for four hours without being damaged, provided that a constant 50\% load precedes and follows the overload. See ANSI C57.96-01.250 for additional limitations.

Continuous overload capacity is not deliberately designed into a transformer because the design objective is to be within the allowed winding temperature rise with nameplate loading.

## Insulation System and Temperature Rise

Industry standards classify insulation systems and rise as shown below:

Insulation System
Classification

|  | + <br> Winding | + <br> Hot <br> Spot | Temp. <br> Class |
| :--- | :--- | :--- | :--- |
| Ambient | Rise | $10^{\circ} \mathrm{C}$ | $105^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $55^{\circ} \mathrm{C}$ | $10^{\circ} \mathrm{C}$ |  |
| $40^{\circ} \mathrm{C}$ | $80^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ |
| $25^{\circ} \mathrm{C}$ | $135^{\circ} \mathrm{C}$ | $20^{\circ} \mathrm{C}$ | $180^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $115^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $185^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $220^{\circ} \mathrm{C}$ |

The design life of transformers having different insulation systems is the same-the lower-temperature systems are designed for the same life as the higher-temperature systems.

## Enclosures

Eaton ventilated transformers Types DS-3M and DT-3M use a NEMA 2 rated (drip-proof) enclosure as standard, and are rated NEMA 3 R with the addition of weathershields. Eaton encapsulated transformers Types EPM and EPTM use a NEMA 3R rated enclosure.

## Winding Terminations

Primary and secondary windings are terminated in the wiring compartment. Encapsulated units have copper leads or stabs brought out for connections. Ventilated transformers have leads brought out to aluminum pads that are predrilled to accept Cu/Al lugs.
Lugs are not supplied with
these transformers. Eaton recommends that external cables be rated $90^{\circ} \mathrm{C}$ (sized at $75^{\circ} \mathrm{C}$ ampacity) for encapsulated designs and $75^{\circ} \mathrm{C}$ for ventilated designs.

## Series-Multiple Windings

Series-multiple windings consist of two similar coils in each winding that can be connected in series or parallel (multiple). Transformers with series-multiple windings are designated with an " $x$ " or "/" between the voltage ratings, such as voltages of " $120 / 240$ " or " $240 \times 480$." If the seriesmultiple winding is designated by an " $x$," the winding can be connected only for a series or parallel. With the "/" designation, a mid-point also becomes available in addition to the series or parallel connection. As an example, a $120 \times 240$ winding can be connected for either 120 (parallel) or 240 (series), but a $120 / 240$ winding can be connected for 120 (parallel), 240 (series) or 240 with a 120 mid-point.

## Sound Levels

All Eaton 600 volt class general-purpose dry-type distribution transformers are designed to meet NEMA ST-20 sound levels listed here. These are the sound levels measured in a soundproof environment. Actual sound levels measured at an installation will likely be higher due to electrical connections and
environmental conditions. Lower sound levels are available and should be specified when the transformer is going to be installed in an area where sound may be a concern.

For additional information, please refer to Section 2.7

## Page V2-T2-195

## Features, Benefits and Functions

- 60 Hz operation
- 600 volt class insulation
- Short-term overload capability as required by ANSI
- Meet NEMA ST-20 sound levels

## Standards and Certifications

- UL listed
- CSA certified

## Industry Standards

All Eaton dry-type distribution and control transformers are built and tested in accordance with applicable NEMA, ANSI and IEEE Standards. All 600 volt class transformers are UL listed unless otherwise noted.

## Seismically Qualified

Eaton-manufactured dry-type distribution transformers are seismically qualified, and exceed requirements of the International Building Code (IBC) and California Code Title 24.

Catalog Number Selection
Please refer to Section 2.7
Page V2-T2-187.

## Product Selection

For quick selection data, refer to the tables on this and the following pages.

## Selection Requirements

You should have the following information before selecting a buck-boost transformer:

## Line Voltage

The voltage that you want to buck (decrease) or boost (increase). This can be found by measuring the supply line voltage with a voltmeter.

## Load Voltage

The voltage at which your equipment is designed to operate. This is listed on the nameplate of the load equipment.

## Load Amperes or Load kVA

You do not need to know both-one or the other is sufficient for selection purposes. This information usually can be found on the nameplate of the equipment that you want to operate.

## Frequency

The supply line frequency must be the same as the frequency of the equipment to be operated-Eaton's buck-boost transformers operate at 60 Hz only.

## Phase

The supply line should be the same as the equipment to be operated-either singleor three-phase.

## Transformer Interconnection

For three-phase applications, interconnections of transformers should be made in a junction box. Two or three transformers may be used depending on an open delta (2) or wye (3) connection.

## 5-Step Selector

The tables that follow will simplify the selection of the buck-boost transformers. There are no calculations needed; simply follow these five steps:

1. Refer to the table having the same output voltage as the equipment you want to operate. For example, if you are installing a 240 volt 6 kVA single-phase load use selection table on the page.
2. Select the available line voltage across the top of the chart that is closest to the actual supply voltage. Therefore, for example, if the available line voltage is 213 volts, use the 212 volt column.
3. Read down the column until you reach an output kVA or amps rating equal to or greater than the load requirements. Since 6 kVA , in the example, is not listed, use the next higher rating, or 7.5 kVA .
4. Read across to the far left columns for the catalog number and quantity of transformers for your application. In this case, you will need one (1) catalog number S10N06P01P.
5. Connect the buck-boost transformer(s) you have selected in accordance with the connection diagram specified at the bottom of the available line voltage column. In this example, Diagram " $F$ " would be used.

Note: For single-phase connections and three-phase open delta connections, inputs and outputs may be reversed. kVA capacity remains constant.

Additional Product Selection information begins on
Page V2-T2-189.

## Distribution Transformers

## Accessories

Please refer to Section 2.7 Page V2-T2-191.

## Technical Data and Specifications

## Frequency

Eaton buck-boost transformers are designed for 60 Hz operation.

## Overload Capability

Short-term overload is designed into transformers as required by ANSI. Dry-type distribution transformers will deliver 200\% nameplate load for one-half hour, $150 \%$ load for one hour, and 125\% load for four hours without being damaged, provided that a constant 50\% load precedes and follows the overload. See ANSI C57.96-01.250 for additional limitations.
Continuous overload capacity is not deliberately designed into a transformer because the design objective is to be within the allowed winding temperature rise with nameplate loading.

## Insulation System and Temperature Rise

Industry standards classify insulation systems and rise as shown below:

Insulation System
Classification

|  | + <br> Winding <br> Rise | + <br> Hot <br> Spot | $\boldsymbol{=}$ <br> Temp. <br> Class |
| :--- | :--- | :--- | :--- |
| $40^{\circ} \mathrm{C}$ | $55^{\circ} \mathrm{C}$ | $10^{\circ} \mathrm{C}$ | $105^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $80^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ |
| $25^{\circ} \mathrm{C}$ | $135^{\circ} \mathrm{C}$ | $20^{\circ} \mathrm{C}$ | $180^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $115^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $185^{\circ} \mathrm{C}$ |
| $40^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $30^{\circ} \mathrm{C}$ | $220^{\circ} \mathrm{C}$ |

The design life of transformers having different insulation systems is the same-the lower-temperature systems are designed for the same life as the higher-temperature systems.

## Enclosures

Eaton encapsulated buckboost transformers use a NEMA 3R rated enclosure

## Winding Terminations

Primary and secondary windings are terminated in the wiring compartment. Encapsulated units have copper leads or stabs brought out for connections. Lugs are not supplied with these transformers. Eaton recommends that external cables be rated $90^{\circ} \mathrm{C}$ (sized at $75^{\circ} \mathrm{C}$ ampacity) for encapsulated designs.

## Series-Multiple Windings

Series-multiple windings consist of two similar coils in each winding that can be connected in series or parallel (multiple). Transformers with series-multiple windings are designated with an " $x$ " or "/" between the voltage ratings, such as voltages of " $120 / 240$ " or " $240 \times 480$." If the series-multiple winding is designated by an " $x$," the winding can be connected only for a series or parallel. With the "/" designation, a mid-point also becomes available in addition to the series or parallel connection. As an example, a $120 \times 240$ winding can be connected for either 120 (parallel) or 240 (series), but a 120/240 winding can be connected for 120 (parallel), 240 (series) or 240 with a 120 mid-point.

## Sound Levels

All Eaton 600 volt class general-purpose dry-type distribution transformers are designed to meet NEMA ST-20 sound levels listed here. These are the sound levels measured in a soundproof environment. Actual sound levels measured at an installation will likely be higher due to electrical connections and environmental conditions. Lower sound levels are available and should be specified when the transformer is going to be installed in an area where sound may be a concern.

For additional information, please refer to Section 2.7
Page V2-T2-195.
Note: When installation is to be made on a grounded system, consideration must be given to the resulting voltage. Thus, on a 208 grounded wye/120 system, the voltage can be boosted to 240 volts but the voltage to ground will be 139 volts. If $240 / 120$ volts with a mid-point ground is needed, a standard two-winding transformer must be used.

The following formulas can be used to calculate specific requirements.

For single-phase:

For three-phase:

LOAD kVA $=\frac{$|  Line Load Voltage $\times 1.73 \mathrm{x}$ |
| :---: |
|  Full Load Amperes  |}{1000}

## Average Sound Levels

| NEMA ST-20 Average Sound Level, dB |  |  |  |
| :---: | :---: | :---: | :---: |
| Equivalent Winding kVA Range | Self-Cooled Ve <br> K-Factor 1, 4, 9 | (up to 1.2 kV ) <br> K-Factor 13, 20 | Encapsulated (up to $\mathbf{1 . 2} \mathbf{~ k V ) ~}$ |

## Wiring Diagrams

## Buck-Boost Transformers Wiring Diagrams

Note
(1) WARNING! If input is three-wire, "neutral" connection must be isolated and insulated! When used to supply a three-phase, four-wire load, the source must be three-phase, four-wire wye.

Transformers that are currently specifically excluded from the scope of DOE 10 CFR Part 431 include:

- Liquid-filled transformers below 10 kVA
- Dry-type transformers below 15 kVA
- AC and DC drives transformers
- Rectifier transformers designed for high harmonics
- Autotransformers
- Non-distribution transformers, such as UPS transformers
- Special impedance or regulation transformers
- Regulating transformers
- Sealed and non-ventilated transformers
- Machine tool transformers
- Welding transformers
- Transformers with tap ranges greater than 15\%
- Transformers with a frequency other than 60 Hz
- Grounding transformers
- Testing transformers

## Medium Voltage Distribution Transformers

## Product Description

Note: The following pages provide listings for most standard transformer ratings and catalog numbers. For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton.

## Single- and Three-Phase

- Ventilated, NEMA 3R enclosure standard
- Suitable for indoor or outdoor applications
- Upright mounting only
- $220^{\circ} \mathrm{C}$ insulation system
- $150^{\circ} \mathrm{C}$ rise standard; $115^{\circ} \mathrm{C}$ or $80^{\circ} \mathrm{C}$ rise optional
- Available in single-phase ratings 15-333 kVA
- Available in single-phase ratings 25-167 kVA; in three-phase ratings 15-1500 kVA

## Application Description

 U.S. DOE 10 CFR Part 431 compliant energy-efficient transformers are specifically designed to meet the energy efficiency standards set forth in U.S. DOE 10 CFR Part 431. Compliant transformers are optimized to offer maximum efficiency at 50\% of nameplate rating.Transformers
Distribution Transformers

## Features, Benefits <br> and Functions

- 60 Hz operation (except as noted)
- Short-term overload capability as required by ANSI
- Meet NEMA ST-20 sound levels
- Meet federal energy efficiency requirements for dry-type transformers effective as of January 1, 2010

## Standards and Certifications

- UL listed

Listed

## Industry Standards

All Eaton dry-type distribution and control transformers are built and tested in accordance with applicable NEMA, ANSI and IEEE Standards.

## Seismically Qualified

Eaton manufactured dry-type distribution transformers are seismically qualified and exceed requirements of the International Building Code (IBC) and California Code Title 24.

## Notes

(1) UL 5085 replaces UL 506 .
(2) Applies to $25-50 \mathrm{kVA}$.
(3) Applies to 25 kVA .
(4) Applies to $15-25 \mathrm{kVA}$.
(5) Applies to 37.5 kVA .
6) Applies to 3 kVA .
(7) Applies to 5-9 kVA.
(8) Applies to $30-75 \mathrm{kVA}$.
(9) Applies to 30 kVA .

In addition to the above standards, Eaton dry-type distribution transformers are also manufactured in compliance with the
applicable standards listed below.
Not all of the following standards apply to every transformer.

NEC: National Electrical Code
NEMA ST-1: Specialty Transformers (C89.1) control transformers).
NEMA ST-20: General-Purpose Transformers.

NEMA TP-1: Guide for Determining Energy Efficiency for Distribution Transformers.
NEMA 250: Enclosures for Electrica
Equipment (1000 volts maximum).
IEEE C57.12.01: General Requirements for Dry-Type Distribution and Power
Transformers (including those with solidcast and/or resin-encapsulated windings)

ANSI C57.12.70: Terminal Markings and Connections for Distribution and Power Transformers.

ANSI C57.12.91: Standard Test Code
for Dry-Type Distribution and Power Transformers.

CSA C22 No. 47-M90: Air-Cooled Transformers (Dry-Type).
CSA C9-M1981: Dry-Type Transformers CSA C22.2 No. 66: Specialty Transformers.
CSA 802-94: Maximum Losses for
Distribution, Power and Dry-Type Transformers.

NEMA TP-2: Standard Test Method for
Measuring the Energy Consumption of
Distribution Transformers.
NEMA TP-3

## Catalog Number Selection

General-Purpose, Energy-Efficient, Mini-Power Center, Shielded Isolation, Nonlinear, Buck-Boost, Marine Duty Transformers-

## Notes

(1) Model number is not used on newly designed/redesigned transformers.
(2) Copper windings.
(3) Grade 304 stainless steel enclosure (does not imply a NEMA 4X rating).
(4) Open type core and coil assembly.
(5) Totally enclosed non-ventilated DS-3 or DT-3.
(6) $50 / 60 \mathrm{~Hz}$.
(7) Low sound design. LS47 indicates low sound equal to 47 dB ; LS42 indicates 42 dB .
(8) Fungus proof
(9) Certified test report of standard production tests for the specific serial number to be shipped.
(10) Certified sound level report.
(11) CE Marked
(12) Thermal indicator embedded in center coil. Suffix "TT" indicates two thermal indicators of different temperature ratings, are installed.
(B) NEMA TP-1 efficient.
(14) $0^{\circ}$ phase-shift (used with HMTs).
(15) $+15^{\circ}$ phase-shift (used with HMTs).
(16) $-15^{\circ}$ phase-shift (used with HMTs).
(17) $-30^{\circ}$ phase-shift (used with HMTs).
(18) CSL3 DOE 2007 energy-efficient.
(19) NEMA 4X Grade 304 stainless steel enclosure.
(20) Easy install base
(21) Grade 316 stainless steel enclosure (does not imply NEMA 4X rating). (22) Integral 2 -inch infrared viewing window. (23) Integral 3 -inch infrared viewing window. (24) Integral 4 -inch infrared viewing window. (25) NEMA Premium ${ }^{\circledR}$ Efficient.

For Eaton's industrial control transformers catalog number selection, see Page V2-T2-188.

Contact your local Eaton sales office for voltage combinations not shown. Use table for catalog number breakdown only.
Do not use to create catalog numbers because all combinations may not be valid.

Transformers

## Motor Drive Isolation Transformers-Example: MD145E89B

Notes
(1) For other tap combinations, contact your local Eaton sales office.

Contact your local Eaton sales office for voltage combinations not shown. Use table for catalog number breakdown only. Do not use to create catalog numbers because all combinations may not be valid.

## Product Selection

## Single-Phase Transformers

## How to Select Single-Phase Units

1. Determine the primary (source) voltage-the voltage presently available.
2. Determine the secondary (load) voltage-the voltage needed at the load.
3. Determine the kVA load:

- If the load is defined in kVA, a transformer can be selected from the tabulated data
- If the load rating is given in amperes, determine the load kVA from the chart (below right). To determine kVA when volts and amperes are known, use the formula:

$$
\mathrm{kVA}=\frac{\text { Volts Amperes }}{1000}
$$

- If the load is an AC motor, determine the minimum transformer kVA from the chart at the right
- Select a transformer rating equal to or greater than the load kVA.

4. Define tap arrangements needed.
5. Define temperature rise.

Using the above procedure, select the transformer from the listings in this catalog.

Single-Phase AC Motors

| Horsepower | Full Load Amperes |  |  |  | Minimum <br> Transformer kVA ${ }^{1}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 115 Volts | 208 Volts | 220 Volts | 230 Volts |  |
| 1/6 | 4.4 | 2.4 | 2.3 | 2.2 | 0.53 |
| 1/4 | 5.8 | 3.2 | 3.0 | 2.9 | 0.70 |

| 50 | 416 | 240 | 227 | 208 | 180 | 104 | 83 | 20.8 | 12.0 |
| 75 | 625 | 360 | 341 | 312 | 270 | 156 | 125 | 31.3 | 18.0 |
| 100 | 833 | 480 | 455 | 416 | 361 | 208 | 166 | 41.7 | 24.0 |
| 167 | 1391 | 802 | 759 | 695 | 602 | 347 | 278 | 69.6 | 40.1 |

## Notes

(1) If motors are started more than once per hour, increase minimum transformer kVA by $20 \%$.

When motor service factor is greater than 1 , increase full load amperes proportionally. Example: If service factor is 1.15, increase above ampere values by $15 \%$.

## Three-Phase Transformers

## How to Select Three-Phase Units

1. Determine the primary (source) voltage-the voltage presently available.
2. Determine the secondary (load) voltage-the voltage needed at the load.
3. Determine the KVA load:

- If the load is defined in KVA, a transformer can be selected from the tabulated data
- If the load rating is given in amperes, determine the load kVA from the chart (below right). To determine kVA when volts and amperes are known, use the formula:

$$
\kappa \mathrm{VA}=\frac{\text { Volts } \text { Amperes } 1.732}{1000}
$$

- If the load is an AC motor, determine the minimum transformer kVA from the chart at the right
- Select a transformer rating equal to or greater than the load kVA

4. Define tap arrangements needed.
5. Define temperature rise.

Using the above procedure, select the transformer from the listings in this catalog.

## Notes

(1) If motors are started more than once per hour, increase minimum transformer kVA by $20 \%$.

When motor service factor is greater than 1 , increase full load amperes proportionally. Example: If service factor is 1.15, increase above ampere values by $15 \%$.

## Options and Accessories

(Order separately)

## Weathershield Kit

A weathershield kit consisting of a front and rear cover shield must be installed on all ventilated dry-type distribution transformers when the unit is located outdoors. The shields protect the transformer top ventilation openings against rain but allow for proper
ventilation. Field installation hardware is not required. Refer to specific transformer listing for selection of weathershield kit. Proper installation provides a NEMA 3R rating.

Note: For 316 stainless steel, add the suffix 'S' to the catalog number.

Weathershield Kit

| Fits Frame Size(s) ${ }^{(1)}$ | Catalog Number ${ }^{(2)}$ |
| :---: | :---: |

| 944 | WS61 |
| 945 | WS62 |

## Terminal Extension Kit

A terminal extension kit is used to allow front access to the rear terminals on most 500 and 750 kVA transformers (transformers on frames 919 and 920) when insufficient space is available at the rear of the transformer. Eaton recommends a minimum 6 -inch clearance from the wall to maintain proper ventilation.

## Wall-Mounting Bracket

Wall-mounting brackets are used to wall-mount ventilated transformers. This bracket allows the transformer to be installed with the proper clearance, as recommended by Eaton.

| Terminal |  |  |  | Extension Kit |
| :--- | :--- | :--- | :---: | :---: |
| Fits Frame <br> Size(ss (1) | Bus <br> Material | Catalog <br> Number |  |  |
| 919 | Aluminum | EXT55AL |  |  |
| 919 | Copper | EXT55CU |  |  |
| 920 | Aluminum | EXT77AL |  |  |
| 920 | Copper | EXT77CU |  |  |

Wall-mounting brackets are compatible with the following frames.

| Wall-Mounting Bracket | Availability Guide Wall-Mounting Bracket WMB01 |

Notes
(1) Effective June 1, 2001, frame numbers will have a prefix of FR, e.g., FR819. Dimensions, accessories and so on are still applicable as if the FR did not exist.

Lugs are rated $\mathrm{Al} / \mathrm{Cu}$ and are suitable for use with either aluminum or copper conductors.

## Notes

[^25]
## Technical Data and Specifications

## Customer-Furnished Connecting Cables

Eaton recommends that external cables be rated $90^{\circ} \mathrm{C}$ (sized at $75^{\circ} \mathrm{C}$ ampacity) for encapsulated designs and $75^{\circ} \mathrm{C}$ for ventilated designs.
Primary and secondary terminal lugs are not included. Lug kits are available separately.

## Overload Capability

Short-term overload capacity is designed into transformers as required by ANSI. Dry-type distribution transformers will deliver 200\% nameplate load for one-half hour, $150 \%$ load for one hour and $125 \%$ load for four hours without being damaged, provided that a constant $50 \%$ load precedes and follows the overload. See ANSI C57.96-01.250 for additional limitations.

Continuous overload capacity is not deliberately designed into a transformer because the design objective is to be within the allowed winding temperature rise with nameplate loading.

## Seismically Qualified

Eaton manufactured dry-type distribution transformers are seismically qualified, and exceed requirements of the Uniform Building Code (UBC) and California Code Title 24.

## Taps

Primary taps are available in most ratings to allow compensation for source voltage variations.

## Series-Multiple Windings

Series-multiple windings consist of two similar coils in each winding that can be connected in series or parallel (multiple). Transformers with series-multiple windings are designated with a " $x$ " or "/" between the voltage ratings, such as voltages of " $120 / 240$ " or " $240 \times 480$." If the series-multiple winding is designated by an " $x$," the winding can be connected only for a series or parallel. With the "/" designation, a midpoint also becomes
available in addition to the series or parallel connection. As an example, a $120 \times 240$ winding can be connected for either 120 (parallel) or 240 (series), but a 120/240 winding can be connected for 120 (parallel), 240 (series) or 240 with a 120 midpoint.

## Enclosures

Eaton's ventilated transformers-Types DS-3, DT-3, MD and KT-use a NEMA 2 rated (drip-proof) enclosure as standard, and are rated NEMA 3R with the addition of weathershields. Eaton encapsulated-Types EP, EPT, EPZ and EPTZand totally enclosed, nonventilated (Types DS-3E and DT-3E) transformers use a NEMA 3R rated enclosure.

## Buck-Boost Transformers

An autotransformer has only one winding, and is therefore smaller and more economical than the conventional twowinding transformer. In an autotransformer, the primary and secondary are electrically and mechanically connected. The required secondary voltage is obtained by "tapping-off" from the single winding.

Buck-boost autotransformers are insulated units with $120 \times 240$ or $240 \times 480$ volt primaries and $12 / 24,16 / 32$ or 24/48 volt secondaries, and provide a very economical method for minor voltage adjustments where circuit isolation is not needed.
Autotransformers can be used only where local electrical codes permit, and isolation of the two circuits is not required.

## Nonlinear Ratings

The transformers shall be specifically designed to supply circuits with a harmonic profile equal to or less than a K-factor of 4 or 13 , as described in the following table, without exceeding specified temperature rise.
transformers and their installation to minimize the potential for sound transmission to surrounding structures and sound reflection. It is suggested that the following installation methods be included:

1. If possible, mount the transformer away from corners of walls or ceilings. For installation that must be near a corner, use soundabsorbing materials on the walls and ceilings if necessary to eliminate reflection.
2. Provide a solid foundation for mounting the transformer and then use vibration dampening mounts if not already provided in the transformer. (Eaton encapsulated EP/EPT designs use a special encapsulation system and ventilated DS/DT-3 designs contain a built-in vibration dampening system to minimize and isolate sound transmission.)
3. Provide flexible conduit to make the connections to the transformer.
4. Locate the transformer as far as possible from areas where high sound levels are undesirable.

## Sound Levels

All Eaton 600 volt class general-purpose dry-type distribution transformers are designed to meet NEMA ST-20 sound levels listed here. These are the sound levels measured in a soundproof environment. Actual sound levels measured at an installation will likely be higher (up to 15 dB greater) due to electrical connections and environmental conditions. Lower sound levels are available and should be specified when the transformer is going to be installed in an area where sound may be a concern.

All Eaton general-purpose dry-type distribution transformers are designed with sound levels lower than NEMA ST-20 maximum levels. However, consideration should be given to the specific location of the
Average Sound Levels

## Typical Specifications-General-Purpose (1000 kVA and Below)

## General

Furnish and install, singlephase and three-phase general-purpose individually mounted dry-type transformers of the twowinding type, self-cooled, with ratings and voltages as indicated on the drawings. Transformers shall be manufactured by Eaton.

Transformers shall be designed, manufactured and tested in accordance with all the latest applicable ANSI, NEMA and IEEE Standards. All 600-volt class transformers through 1000 kVA shall be UL listed and bear the UL label.

Transformers shall be designed for continuous operation at rated kVA, for operation 24 hours a day, 365 days a year, with normal life expectancy as defined in ANSI C57.96.

## Insulation Systems

Transformers shall be insulated as follows:

- Type EP or EPT: 0.050 through 75 kVA : $180^{\circ} \mathrm{C}$ insulation system
- Type DS-3 or DT-3: 15 kVA and above: $220^{\circ} \mathrm{C}$ insulation system

Required performance shall be obtained without exceeding the above indicated temperature rise in a $40^{\circ} \mathrm{C}$ maximum ambient, with a $30^{\circ} \mathrm{C}$ average over 24 hours.

All insulation materials shall be flame-retardant and shall not support combustion as defined in ASTM Standard Test Method D635.

## Core and Coil Assemblies

Transformer core shall be constructed with high-grade, non-aging, silicon steel with high magnetic permeability, and low hysteresis and eddy current losses. Maximum magnetic flux densities shall be substantially below the saturation point. The transformer core volume shall allow efficient transformer operation at $10 \%$ above the nominal tap voltage. The core laminations shall be tightly clamped and compressed. Coils shall be wound of electrical-grade [aluminum] [copper] and continuous wound construction. BIL (basic impulse level) for all 600 -volt class windings shall be 10 kV .

On encapsulated units rated [75 kVA and below] [15 kVA and below] [9 kVA and below], the core and coil assembly shall be completely encapsulated in a proportioned mixture of resin or epoxy and aggregate to provide a moisture-proof, shock-resistant seal. The core and coil encapsulation system shall minimize the sound level.

On ventilated units rated [15 kVA and above] [30 kVA and above] [112.5 kVA and above], the core and coil assembly shall be installed on vibrationabsorbing pads.

## Enclosures

The enclosure shall be made of heavy-gauge steel and shall be finished using a continuous process of degreasing, cleaning and phosphatizing, followed by electrostatic deposition of a thermosetting polyester powder coating and subsequent baking. The coating color shall be ANSI 61 and shall be UL recognized for outdoor use. The maximum temperature on top of the enclosure shall not exceed $90^{\circ} \mathrm{C}$.

On units rated [75 kVA and below] [15 kVA and below] [9 kVA and below] encapsulated, the enclosure construction shall be totally enclosed, non-ventilated, NEMA 3R, with lifting provisions.
On units rated [15 kVA and above] [ 30 kVA and above] [112.5 kVA and above], the enclosure construction shall be ventilated, NEMA 2, dripproof, with lifting provisions. All ventilation openings shall be protected against falling dirt. On outdoor units, provide
suitable weathershields over ventilation openings. To
ensure proper ventilation, locate the unit at least 6 inches ( 152.4 mm ) from the adjacent wall or structure

## Tests

The following tests shall be performed as standard on all transformers:

1. Ratio tests at the rated voltage connection and at all tap connections.
2. Polarity and phase relation tests on the rated voltage connection.
3. Applied potential tests.
4. Induced potential test.
5. No-load and excitation current at rated voltage on the rated voltage connection.

## Sound Levels

Transformer average sound levels shall not exceed the following ANSI and NEMA levels for self-cooled ratings measured in accordance with NEMA ST-20.

## Average Sound Levels

Transformer Standards, Technical Data and Accessories

## Typical Specifications-

## Dry-Type Transformers for Nonlinear Loads

## General

Furnish and install, individually mounted dry-type transformers of the twowinding type, self-cooled, with ratings and voltages as indicated on the drawings.
Transformers shall be manufactured by Eaton.
Transformers shall be designed, manufactured and tested in accordance with all the latest applicable ANSI, NEMA and IEEE Standards. All 600-volt class transformers through 500 kVA shall be UL listed as suitable for non-sinusoidal current loads with K factor not to exceed [4] [13] [20].

## Insulation Systems

Transformers shall be insulated with a UL recognized $220^{\circ} \mathrm{C}$ insulation system. Winding temperature rise shall be [ $\left.80^{\circ} \mathrm{C}\right]\left[115^{\circ} \mathrm{C}\right]\left[150^{\circ} \mathrm{C}\right]$.
Required performance shall be obtained without exceeding the above indicated temperature rise in a $40^{\circ} \mathrm{C}$ maximum ambient, with a $30^{\circ} \mathrm{C}$ average.
All insulation materials shall be flame-retardant and shall not support combustion as defined in ASTM Standard Test Method D635.

## Core and Coil Assemblies

Transformer core shall be constructed with high-grade, non-aging, silicon steel with high magnetic permeability, and low hysteresis and eddy current losses. Maximum magnetic flux densities shall be substantially below the saturation point. The transformer core volume shall allow efficient transformer operation at $10 \%$ above the nominal tap voltage. The core laminations shall be tightly clamped and compressed.

Transformer coils shall be wound of electrical-grade [aluminum] [copper] conductor with continuous wound construction. An electrostatic shield consisting of a single turn of aluminum shall be placed between the primary and secondary winding and grounded to the transformer core. BIL (basic impulse level) for all 600-volt class windings shall be 10 kV .

The core and coil assembly shall be installed on vibrationabsorbing pads.
The neutral conductor shall be rated to carry 200\% of normal phase current.

## Enclosures

The enclosure shall be made of heavy gauge steel and shall be finished utilizing a continuous process of degreasing, cleaning and phosphatizing, followed by electrostatic deposition of a polymer polyester powder coating and baking. The coating color shall be ANSI 61 and shall be UL recognized for outdoor use. The maximum temperature on top of the enclosure shall not exceed $90^{\circ} \mathrm{C}$.

The enclosure construction shall be ventilated, NEMA 2, drip-proof, with lifting provisions. All ventilation openings shall be protected against falling dirt. On outdoor units, provide suitable weathershields over ventilation openings. To ensure proper ventilation, locate the unit at least 6 inches ( 152.4 mm ) from the adjacent wall or structure.

## Nonlinear Ratings

The transformers shall be specifically designed to supply circuits with a harmonic profile equal to or less than a K-factor of 4 or 13 as described below without exceeding $\left[80^{\circ} \mathrm{C}\right]\left[115^{\circ} \mathrm{C}\right]$ [ $150^{\circ} \mathrm{C}$ ] temperature rise.

Nonlinear Ratings

| Harmonic | K-4 | K-13 |
| :--- | :--- | :--- |
| Fundamental | $100.0 \%$ | $100.0 \%$ |
| 3rd | $34.0 \%$ | $70.0 \%$ |
| 5th | $22.0 \%$ | $42.0 \%$ |
| 7 th | $3.0 \%$ | $5.0 \%$ |
| 9th | $1.0 \%$ | $3.0 \%$ |
| 11th | $0.7 \%$ | $3.0 \%$ |
| 13th | $0.5 \%$ | $1.0 \%$ |
| 15th | $0.3 \%$ | $0.7 \%$ |
| 17th | $0.3 \%$ | $0.6 \%$ |

## Tests

The following tests shall be performed as standard on all transformers:

1. Ratio tests at the rated voltage connection and at all tap connections.
2. Polarity and phase relation tests on the rated voltage connection.
3. Applied potential tests.
4. Induced potential test.
5. No-load and excitation current at rated voltage on the rated voltage connection.

## Sound Levels

Transformer average sound levels shall not exceed the following ANSI and NEMA levels for self-cooled ratings measured in accordance with NEMA ST-20.

## Average Sound Levels

| NEMA ST-20 Averag <br> Equivalent Winding kVA Range | Self-Cooled Ventilated (up to 1.2 kV ) |  | Encapsulated (up to $\mathbf{1 . 2}$ kV) |

## Typical Specification-

## AC Adjustable Frequency Drive Isolation Transformers

## General

Furnish and install, singlephase and three-phase general-purpose individually mounted dry-type transformers of the twowinding type, self-cooled, with ratings and voltages for input application as indicated on the drawings. Transformers shall be manufactured by Eaton.

Transformers shall be designed, manufactured and tested in accordance with al the latest applicable ANSI, NEMA and IEEE Standards. All 600-volt class transformers through 550 kVA shall be UL listed and bear the UL label.

Transformers shall be designed for continuous operation at rated kVA, for operation 24 hours a day, 365 days a year, with normal life expectancy as defined in ANSI C57.96

## Insulation Systems

Transformers shall be insulated with a UL recognized $220^{\circ} \mathrm{C}$ insulation system.

Required performance shall be obtained without exceeding the above indicated temperature rise in a $40^{\circ} \mathrm{C}$ maximum ambient, with a $30^{\circ} \mathrm{C}$ average over 24 hours.

All insulation materials shall be flame-retardant and shall not support combustion as defined in ASTM Standard Test Method D635.

## Core and Coil Assemblies

Transformer core shall be constructed with high-grade, non-aging, silicon steel with high magnetic permeability, and low hysteresis and eddy current losses. Maximum magnetic flux densities shall be substantially below the saturation point. The transformer core volume shall allow efficient transformer operation at $10 \%$ above the nominal tap voltage. The core laminations shall be tightly clamped and compressed. Coils shall be wound of electrical-grade [aluminum] [copper] and continuous wound construction. BIL (basic impulse level) for all 600-volt class windings shall be 10 kV .

A temperature sensing device shall be imbedded in the center coil.

The core and coil assembly shall be installed on vibrationabsorbing pads.

## Enclosures

The enclosure shall be made of heavy-gauge steel and shall be finished using a continuous process of degreasing, cleaning, and phosphatizing, followed by electrostatic deposition of a thermosetting polyester powder coating and subsequent baking. The coating color shall be ANSI 61 and shall be UL recognized for outdoor use. The maximum temperature on top of the enclosure shall not exceed $90^{\circ} \mathrm{C}$.

The enclosure construction shall be ventilated, NEMA 2, drip-proof, with lifting provisions. All ventilation openings shall be protected against falling dirt. To ensure proper ventilation, locate the unit at least 6 inches $(152.4 \mathrm{~mm})$ from the adjacent wall or structure. On outdoor units, provide suitable weathershields over ventilation openings.

## Sound Levels

Transformer average sound levels shall not exceed the following ANSI and NEMA levels for self-cooled ratings measured in accordance with NEMA ST-20.

Average Sound Levels

| NEMA ST-20 Average Sound Level, dB |  |  |  |
| :---: | :---: | :---: | :---: |

## Typical Specifications-

## Mini-Power Centers (3-30 kVA)

## General

Furnish and install, singlephase and three-phase general-purpose individually mounted mini-power centers of the two-winding type, self-cooled, with ratings and voltages as indicated on the drawings. Minipower centers shall be manufactured by Eaton.
Units shall be designed, manufactured and tested in accordance with all the latest applicable ANSI, NEMA, IEEE, CSA and UL standards, and shall be UL listed and CSA certified and bear the UL and CSA labels.

Units shall be designed for continuous operation at rated kVA, 24 hours a day, 365 days a year, with normal life expectancy as defined in ANSI C57.96.

Each mini-power center shall include a main primary breaker with an interrupting rating of 14 kA at $277 / 480$ volts; an encapsulated dry-type transformer and a secondary panelboard with main breaker rated 10 kA interrupting rating at 120/240 volts.

1. All interconnecting wiring between the primary breaker and transformer, secondary main breaker and transformer, and distribution section shall be factory installed. Main primary, secondary and feeder breakers shall be enclosed with a padlockable hinged door.
2. The secondary distribution section shall accommodate one-inch, plug-in breakers with 10 kA interrupting capacity.
3. On the all-copper, bolt-on designs, the secondary distribution section shall accommodate bolt-on breakers with 10 kA interrupting capacity.

## Insulation System

Transformers shall be insulated with a $180^{\circ} \mathrm{C}$ insulation system.

Required performance shall be obtained without exceeding the above indicated temperature rise in a $40^{\circ} \mathrm{C}$ maximum ambient, with a $30^{\circ} \mathrm{C}$ average over 24 hours.

All insulation materials shall be flame-retardant and shall not support combustion as defined in ASTM Standard Test Method D635.

## Core and Coil Assemblies

Transformer core shall be constructed with high-grade, non-aging, silicon steel with high magnetic permeability, and low hysteresis and eddy current losses. Maximum magnetic flux densities shall be substantially below the saturation point.

The transformer core volume shall allow efficient transformer operation at $10 \%$ above the nominal tap voltage. The core laminations shall be tightly clamped and compressed. Coils shall be wound of electrical-grade aluminum (copper) with continuous wound construction. BIL (basic impulse level) for all 600-volt class windings shall be 10 kV .
The core and coil assembly shall be completely encapsulated in a proportioned mixture of resin or expoxy and aggregate to provide a moisture-proof, shockresistant seal. The core and coil encapsulation system shall minimize the sound level.

## Enclosures

The enclosure shall be made of heavy-gauge steel and shall be finished using a continuous process of degreasing, cleaning, and phosphatizing, followed by electrostatic deposition of a thermosetting polymer polyester powder coating and subsequent baking. The coating color shall be ANSI 61 and shall be UL recognized for outdoor use. Mini-power centers shall be equipped with a wiring compartment suitable for conduit entry and large enough to allow convenient wiring. The maximum temperature on top of the enclosure shall not exceed $90^{\circ} \mathrm{C}$. The core of the transformer shall be grounded to the enclosure. The enclosure shall be totally enclosed, non-ventilated, NEMA 3R, with lifting eyes.

## Tests

The following tests shall be performed as standard on all transformers:

1. Ratio tests at the rated voltage connection and at all tap connections.
2. Polarity and phase relation tests on the rated voltage connection.
3. Applied potential tests.
4. Induced potential test.
5. No-load and excitation current at rated voltage on the rated voltage connection.

## Sound Levels

Transformer average sound levels shall not exceed the following ANSI/NEMA levels for self-cooled ratings measured in accordance with NEMA ST-20.

\left.| Average Sound Levels (1) |  |
| :--- | :--- |
| NEMA Average |  |
| Sound Level in dB |  |$\right]$

## Typical Specification-

## NEMA TP-1-2002 Compliant Energy-Efficient Transformers

## General

Furnish and install, threephase energy-efficient dry-type transformers that comply with NEMA Standard TP-1-2002 and U.S. DOE 10 CFR Parts 430 and 431. Transformers shall be of the two-winding type, selfcooled, with ratings (kVA) as indicated on the drawings Transformer's losses shall conform to NEMA TP-1 requirements. Transformers shall be manufactured by Eaton.

Transformers shall be designed, manufactured and tested in accordance with all the latest applicable ANSI, NEMA and IEEE Standards, and shall be listed by Underwriters Laboratories and bear the UL label.

Transformers shall be designed for continuous operation at rated kVA, for 24 hours a day, 365 days a year, with normal life expectancy as defined in ANSI C57.96.

## Insulation System and Temperature Rise

Transformers shall be insulated with a $220^{\circ} \mathrm{C}$ insulation system Transformers shall be $150^{\circ} \mathrm{C}$ rise and shall be capable of carrying a $15 \%$ continuous overload without exceeding a $150^{\circ} \mathrm{C}$ rise. Required performance shall be obtained without exceeding the above rise in a $40^{\circ} \mathrm{C}$ maximum, $30^{\circ} \mathrm{C}$ average ambient temperature.

All insulation materials shall be flame-retardant and shall not support combustion as defined in ASTM Standard Test Method D635.

## Core and Coil Assemblies

Transformer core shall be constructed with high-grade, non-aging, silicon steel with high magnetic permeability, and low hysteresis and eddy current losses. Maximum magnetic flux densities shall be substantially below the saturation point.

The transformer core volume shall allow efficient transformer operation at $10 \%$ above the nominal tap voltage. The core laminations shall be tightly clamped and compressed. Coils shall be wound of electrical grade [aluminum] [copper] and continuous wound construction. BIL (basic impulse level) for all 600-volt class windings shall be 10 kV .

The core and coil assembly shall be installed on vibrationabsorbing pads.

## Enclosures

The enclosure shall be made of heavy gauge steel and shall be finished utilizing a continuous process of degreasing, cleaning and phosphatizing, followed by electrostatic deposition of a thermosetting polyester powder coating and subsequent baking. The coating color shall be ANSI 61 and shall be UL recognized for outdoor use.

The enclosure construction shall be ventilated, NEMA 2, drip-proof, with lifting provisions. All ventilation openings shall be protected against falling dirt. To ensure proper ventilation, locate the unit at least 6 inches $(152.4 \mathrm{~mm}$ ) from the adjacent wall or structure.
All transformers shall be equipped with a wiring compartment suitable for conduit entry and large enough to allow convenient wiring. The maximum temperature on top of the enclosure shall not exceed $90^{\circ} \mathrm{C}$.

## Tests

The following tests shall be performed as standard on all transformers:

1. Ratio tests at the rated voltage connection and at all tap connections.
2. Polarity and phase relation tests on the rated voltage connection.
3. Applied potential tests.
4. Induced potential test.
5. No-load and excitation current at rated voltage on the rated voltage connection.

## Efficiency

Transformers shall be energy-efficient with minimum efficiencies as set forth per NEMA TP-1-2002 and U.S. DOE 10 CFR Parts 430 and 431 when operated at $35 \%$ of full load capacity.

## NEMA TP-1-2002 Efficiency Levels

| Single-Phase |  | Three |  |
| :---: | :---: | :---: | :---: |
| kVA | Efficiency | kVA | Efficiency |
| 15 | 97.7 | 15 | 97.0 |
| 25 | 98.0 | 30 | 97.5 |

## Glossary of Transformer Terms

Air cooled: A transformer that is cooled by the natural circulation of air around, or through, the core and coils.

## Ambient noise level: The

 existing or inherent sound level of the area surrounding the transformer, prior to energizing the transformer. Measured in decibels.
## Ambient temperature:

The temperature of the air surrounding the transformer into which the heat of the transformer is dissipated.
Ampacity: The currentcarrying capacity of an electrical conductor under stated thermal conditions. Expressed in amperes

Ampere: The practical unit of electric current.

Attenuation: A decrease in signal power or voltage. Unit of measure is dB .

## Autotransformer:

A transformer in which part of the winding is common to both the primary and the secondary circuits.

Banked: Two or more singlephase transformers wired together to supply a threephase load. Three singlephase transformers can be "banked" together to support a three-phase load. For example, three 10 kVA singlephase transformers "banked" together will have a 30 kVA three-phase capacity.

BIL: Basic impulse level. The ability of a transformer's insulation system to withstand high voltage surges. All Eaton 600V-class transformers have a 10 kV BIL rating.
BTU: British thermal unit. In North America, the term "BTU" is used to describe the heat value (energy content) of fuels, and also to describe the power of heating and cooling systems, such as furnaces, stoves, barbecue grills and air conditioners. When used as a unit of power, BTU "per hour" (BTU/h)
is understood, though this is often abbreviated to just "BTU."
Buck-boost: The name of a standard, single-phase, two-winding transformer application with the low voltage secondary windings connected as an autotransformer for boosting (increasing) or bucking (decreasing) voltages in small amounts. Applications can either be single-phase or three-phase.
CE: Mark to indicate thirdparty approved or selfcertification to specific requirements of the European community.

Celsius (centigrade): Metric temperature measure.
${ }^{\circ} \mathrm{F}=\left(1.8 \times{ }^{\circ} \mathrm{C}\right)+32$
${ }^{\circ} \mathrm{C}=\left({ }^{\circ} \mathrm{F}-32\right) / 1.8$
Center tap: A tap at the midpoint of a winding. The center tap on three-phase delta-delta transformers is called a lighting tap. It provides 5\% of the transformer's kVA for single-phase loads.

Certified tests: Actual values taken during production tests and certified as applying to a given unit shipped on a specific order. Certified tests are serial number-specific.

Common mode: Electrical noise or voltage fluctuation that occurs between all of the line leads and the common ground, or between ground and line or neutral.

## Compensated transformer:

A transformer with a turns ratio that provides a higher than nameplate output (secondary) voltage at no load, and nameplate output (secondary) voltage at rated load. It is common for small transformers ( 2 kVA and less) to be compensated.

## Conductor losses: Losses

(expressed in watts) in a transformer that are incidental to carrying a load: coil resistance, stray loss due to stray fluxes in the
windings, core clamps, and the like, as well as circulating currents (if any) in parallel windings. Also called load losses.
Continuous rating: The load that a transformer can handle indefinitely without exceeding its specified temperature rise.

Core losses: Losses (expressed in watts) caused by magnetization of the core and its resistance to magnetic flux. Also called no-load losses or excitation losses. Core losses are always present when the transformer is energized.

CSA: Canadian Standards Association. The Canadian equivalent of Underwriters Laboratories (UL).

CSL3: Candidate Standard Level 3 (CSL3) design criteria developed by the U.S. Department of Energy. This term is used when considering the maximum, practical efficiency of a transformer.
cUL: Mark to indicate UL Certification to specific CSA Standards.

Decibel (dB): Unit of measure used to express the magnitude of a change in signal or sound level.
Delta connection: A standard three-phase connection with the ends of each phase winding connected in series to form a closed loop with each phase 120 degrees from the other. Sometimes referred to as three-wire.

Dielectric tests: Tests that consist of the application of a voltage higher than the rated voltage for a specified time for the purpose of determining the adequacy against breakdowns of insulating materials and spacings under normal conditions.

## Dry-type transformer: A

transformer in which the core and coils are in a gaseous or dry compound insulating
medium. A transformer that is cooled by a medium other than a liquid, normally by the circulation of air.

E3: Eaton's version of a CSL3 transformer.

Eddy currents: The currents that are induced in the body of a conducting mass by the time variation of magnetic flux or varying magnetic field.
Efficiency: The ratio of the power output from a transformer to the tota power input. Typically expressed as a \%.

Electrostatic shield: Copper or other conducting sheet placed between primary and secondary windings, and grounded to reduce electrical interference and to provide additional protection from line-to-line or line-to-ground noise. Commonly referred to as "Faraday shield."

## Encapsulated transformer:

A transformer with its coils either dipped or cast in an epoxy resin or other encapsulating substance.

Enclosure: A surrounding case or housing used to protect the contained equipment against external conditions and prevent personnel from accidentally contacting live parts.

## Environmentally preferable

product: A product that has a lesser or reduced negative effect on human health and the environment when compared to competing products that serve the same purpose. This comparison may consider raw materials acquisition, production, manufacturing, packaging, distribution, reuse, operation, maintenance and disposal of the product. This term includes recyclable products, recycled products and reusable products.

EPACT: The Energy Policy Act of 1992 (EPAct) is an important piece of legislation for efficiency because it established minimum efficiency levels for dry-type distribution transformers manufactured or imported after December 2006. EPAct, which was based on NEMA standards, defined a number of terms, including what constitutes an energyefficient transformer. The DOE issued a rule that defines these transformers and how manufacturers must comply. DOE EPAct rule (PDF): Energy Efficiency Program for Certain Commercial and Industrial Equipment: Test Procedures, Labeling, and the Certification Requirements for Electric Motors. Final Rule. 10-CFR Part 431.

Excitation current: No load current. The current that flows in any winding used to excite the transformer when all other windings are open-circuited. It is usually expressed in percent of the rated current of a winding in which it is measured. Also called magnetizing current.

FCAN: "Full Capacity Above Nominal" taps. Designates the transformer will deliver its rated kVA when connected to a voltage source which is higher than the rated primary voltage.

FCBN: "Full Capacity Below Nominal" taps. Designates the transformer will deliver its rated kVA when connected to a voltage source which is lower than the rated primary voltage.
Frequency: On AC circuits, designates the number of times that polarity alternates from positive to negative and back again per second, such as 60 cycles per second. Typically measured in Hertz (Hz).

Ground: Connecting one side of a circuit to the earth through low resistance or low impedance paths to help prevent transmitting electrical shock to personnel.

Harmonic: A sinusoidal waveform with a frequency that is an integral multiple of the fundamental frequency $(60 \mathrm{~Hz}$ ).
$60 \mathrm{H}_{3}$ fundamental
$120 \mathrm{H}_{3}$ 2nd harmonic
$180 \mathrm{H}_{3}$ 3rd harmonic
$240 \mathrm{H}_{3}$ 4th harmonic

## Harmonic distortion:

Nonlinear distortion of a system characterized by the appearance of harmonic (non-sinusoidal) currents in the output, when the input is sinusoidal.

Harmonic distortion, total
(THD): The square root of the sum of the squares of all harmonic currents present in a load, excluding the fundamental 60 Hz current. Usually expressed as a percent of the fundamental.

High voltage windings: In a two-winding transformer, the winding intended to have the greater voltage. Usually marked with " H " designations.

HMT: Harmonic Mitigating Transformer (HMT) is better able to handle the harmonic currents present in today's electrical power system. thereby increasing system capacity, reducing distortion throughout a facility, help to minimize downtime and "mysterious" maintenance on equipment, and return the longevity of equipment life through reduced operational energy losses, thereby running cooler.

Hp: Horsepower. The energy required to raise 33,000 pounds a distance of one foot in one minute. 1 hp is equal to 746 watts, or 0.746 kW .

Hi pot: A standard test on dry-type transformers consisting of extra-high potentials (voltages) connected to the windings. Used to check the integrity of insulation materials and clearances.

## Hottest-spot temperature:

The highest temperature inside the transformer winding. Is greater than the measured average
temperature of the coil conductors, when using the resistance change method.

Hysteresis: The tendency of a magnetic substance to persist in any state of magnetization.

Impedance: The retarding forces of current in an AC circuit; the current-limiting characteristics of a transformer. Symbol = Z

Inductance: In electrical circuits, the opposition to a change in the flow of electrical current. Symbol $=\mathrm{L}$

## Inducted potential test:

A standard dielectric test of transformer insulation. Verifies the integrity of insulating materials and electrical clearances.

Inrush current: The initial high peak of current that occurs in the first few cycles of energization, which can be 30 to 40 times the rated current.

## Insulating transformer:

Another term for an isolating transformer.

Insulation: Material with a high electrical resistance.

Insulation materials: Those materials used to insulate the transformer's electrical windings from each other and ground.

## Integral TVSS or SPD: Major

 Standard Change for Surge Protective Devices (formerly known as Transient Voltage Surge Suppressors). The primary safety standard for transient voltage surge suppressors (TVSS) has undergone major revisions in the past three years with mandatory compliance by manufacturers required by September 29, 2009. Even the name of the standard has changed from UL Standard for Safety for Transient Voltage Surge Suppressors, UL 1449 to UL Standard for Safety for Surge Protective Devices, UL 1449. This means that TVSS listed to the UL 1449 2nd Edition standard will no longer be able to be manufactured afterSeptember 29, 2009. All Surge Protective Devices must be designed, tested, manufactured and listed to the UL 1449 3rd Edition standard after this date.

## Isolating transformer:

A transformer where the input (primary) windings are not connected to the output (secondary) windings (i.e., electrically isolated).

K-factor: A common industry term for the amount of harmonics produced by a given load. The larger the K-factor, the more harmonics that are present. Also used to define a transformer's ability to withstand the additional heating generated by harmonic currents.
kVA: Kilovolt-ampere. Designates the output that a transformer can deliver for a specified time at a rated secondary voltage and rated frequency without exceeding the specified temperature rise. When multiplied by the power factor, will give kilowatts or kW.

## 1000 VA $=1 \mathrm{kVA}$

Lamination: Thin sheets of electrical steel used to construct the core of a transformer.

## Limiting temperature:

The maximum temperature at which a component or material may be operated continuously with no sacrifice in normal life expectancy.

Linear load: A load where the current waveform conforms to that of the applied voltage, or a load where a change in current is directly proportional to a change in applied voltage.
Live part: Any component consisting of an electrically conductive material that can be energized under conditions of normal use.

Load losses: ${ }^{2}$ R losses
in windings. Also see conductor losses.

Low voltage winding: In a
two-winding transformer, the winding intended to have the lesser voltage. Usually marked with " $X$ " designations.

Mid-tap: See center tap.
Noise level: The relative intensity of sound, measured in decibels (dB). NEMA Standard ST-20 outlines the maximum allowable noise level for dry-type transformers.

Nonlinear load: A load where the current waveform does not conform to that of the applied voltage, or where a change in current is not proportional to a change in applied voltage.

## Non-ventilated transformer:

 A transformer where the core and coil assembly is mounted inside an enclosure with no openings for ventilation. Also referred to as totally enclosed non-ventilated (TENV).No load losses: Losses in a transformer that is excited at rated voltage and frequency but that is not supplying a load. No load losses include core losses, dielectric losses and conductor losses in the winding due to the exciting current. Also referred to as excitation losses.

Overload capability: Shortterm overload capacity is designed into transformers as required by ANSI. Continuous overload capacity is not deliberately designed into a transformer because the design objective is to be within the allowed winding temperature rise with nameplate loading.

Percent IR (\% resistance): Voltage drop due to resistance at rated current in percent of rated voltage.

## Percent IX (\% reactance):

Voltage drop due to reactance at rated current in percent of rated voltage.

## Percent IZ (\% impedance):

Voltage drop due to
impedance at rated current in percent of rated voltage.

Phase: Type of AC electrical circuit; usually single-phase two- or three-wire, or threephase three- or four-wire.
Polarity test: A standard test on transformers to determine instantaneous direction of the voltages in the primary compared to the secondary.

Primary taps: Taps added to the primary (input) winding. See Tap.

Primary voltage: The input circuit voltage.

Power factor: The cosine of the phase angle between a voltage and a current.
Ratio test: A standard test of transformers to determine the ratio of the input (primary) voltage to the output (secondary) voltage.

Reactance: The effect of inductive and capacitive components of a circuit producing other than unity power factor.
Reactor: A single winding device with an air or iron core that produces a specific amount of inductive reactance into a circuit. Normally used to reduce of control current.

Regulation: Usually expressed as the percent change in output voltage when the load goes from full load to no load.

Scott T connection:
Connection for three-phase transformers. Instead of using three sets of coils for a three-phase load, the transformer uses only two sets of coils.

## Series/multiple winding:

A winding consisting of two or more sections that can be connected for series operation or multiple (parallel) operation. Also called seriesparallel winding.

Short circuit: A low resistance connection, usually accidental, across part of a circuit, resulting in excessive current flow.

Sound levels: All
transformers make some sound mainly due to the vibration generated in its core by alternating flux. All Eaton general-purpose drytype distribution transformers are designed with sound levels lower than NEMA ST-20 maximum levels.

Star connection: Same as a wye connection.

## Step-down transformer:

A transformer where the input voltage is greater than the output voltage.

## Step-up transformer:

A transformer where the input voltage is less than the output voltage.

T-T connection: See Scott T connection.

Tap: A connection brought out of a winding at some point between its extremities, usually to permit changing the voltage or current ratio. Taps are typically used to compensate for above or below rated input voltage, in order to provide the rated output voltage. See FCAN and FCBN.

Temperature class: The maximum temperature that the insulation system of a transformer can continuously withstand. The common insulation classes are 105, 150, 180 (also 185) and 220.

Temperature rise: The increase over ambient temperature of the windings due to energizing and loading the transformer.

Total losses: The sum of the no-load losses and load losses.

Totally enclosed nonventilated enclosure: The core and coil assembly is installed inside an enclosure that has no ventilation to cool the transformer. The transformer relies on heat to radiate from the enclosure for cooling.

## Transformer tests:

Per NEMA ST-20, routine transformer production tests are performed on each transformer prior to shipment. These tests are: Ratio tests on the rated voltage connection; Polarity and Phase Relation tests on the rated connection; NoLoad and Excitation Current tests at rated voltage on the rated voltage connection and Applied Potential and Induced Potential tests. Special tests include sound level testing.

Transverse mode: Electrical noise or voltage disturbance that occurs between phase and neutral, or from spurious signals across metallic hot line and the neutral conductor.

Turns ratio: The ratio of the number of turns in the high voltage winding to that in the low voltage winding.
Typical test data: Tests that were performed on similar units that were previously manufactured and tested.

## UL (Underwriters

Laboratories): An
independent safety
testing organization.
Universal taps: A
combination of six primary voltage taps consisting of 2 at $+2-1 / 2 \%$ FCAN and 4 at -2-1/2\% FCBN.

Watt: A unit of electrical power when the current in a circuit is one ampere and the voltage is one volt.

Wye connection: A standard three-wire transformer connection with similar ends of single-phase coils connected together. The common point forms the electrical neutral point and may be grounded. Also referred to as three-phase four-wire. To obtain the line-to-neutral voltage, divide the line voltage by $\sqrt{3}(1.732)$.

## Frequently Asked Questions About Transformers

## Can 60 Hz transformers be used at other frequencies?

Transformers rated for 60 Hz can be applied to circuits with a higher frequency, as long as the nameplate voltages are not exceeded. The higher the frequency that you apply to a 60 Hz transformer, the less voltage regulation you will have. 60 Hz transformers may be used at lower frequencies but only at reduced voltages corresponding to the reduction in frequency. For example, a 480 to 120 volt 60 Hz transformer can carry rated kVA at 50 Hz but ONLY when applied as a 400 to 100 volt transformer ( $50 / 60 \times 480=400$ ).

## Can single-phase transformers

 be used on a three-phase source?Yes. Any single-phase transformer can be used on a three-phase source by connecting the primary terminals of the single-phase transformer to any two wires of a three-phase system. It does not matter whether the three-phase source is threephase three-wire or threephase four-wire. The output of the transformer will be single-phase.

## Can transformers be used to

 create three-phase power from a single-phase system?No. Single-phase transformers alone cannot be used to create the phaseshifts required for a threephase system. Phase shifting devices (reactors or capacitors) or phase converters in conjunction with transformers are required to change singlephase power to three-phase.

## What considerations need to be taken into account when operating transformers at high altitudes?

At altitudes greater than 3300 feet (1000 meters), the density of the air is less than at lower elevations. This reduces the ability of the air surrounding a transformer to cool it, so the temperature
rise of the transformer is increased. Therefore, when a transformer is being installed at altitudes greater than 3300 feet above sea level, it is necessary to derate the usable capacity of the transformer. The table below lists the derating factors. As an example, a 75 kVA 480V-208Y/120V transformer installed at 10,000 feet needs to be derated by $4 \%$. Instead of 208 A output, the usable current is only 199A.

## Altitude

| Feet | Meters | Current <br> Rating <br> Factor |
| :--- | :--- | :--- |
| 3300 | 1000 | 1.00 |
| 4000 | 1200 | 0.995 |
| 5000 | 1500 | 0.99 |
| 6000 | 1800 | 0.985 |
| 7000 | 2100 | 0.98 |
| 8000 | 2400 | 0.97 |
| 9000 | 2700 | 0.965 |
| 10,000 | 3000 | 0.96 |
| 12,000 | 3600 | 0.95 |
| 14,000 | 4200 | 0.935 |
| 15,000 | 4500 | 0.93 |

What considerations need to
be taken into account when operating transformers where the ambient temperature is high?
Eaton's dry-type transformers are designed in accordance with ANSI standards to operate in areas where the average maximum ambient temperature is $40^{\circ} \mathrm{C}$. For operation in ambient temperatures above $40^{\circ} \mathrm{C}$ there are two options:

1. Order a custom designed transformer made for the specific application.
2. Derate the nameplate kVA of a standard transformer by 8\% for each $10^{\circ} \mathrm{C}$ of ambient above $40^{\circ} \mathrm{C}$.

## What is the normal life expectancy of a transformer?

When a transformer is operated under ANSI/IEEE basic loading conditions ANSI C57.96), its normal life expectancy is 20 years. The ANSI/IEEE basic loading conditions are:
A. The transformer is continuously loaded at rated kVA and rated voltages.
B. The average temperature of the ambient air during any 24 -hour period is equal to $30^{\circ} \mathrm{C}$ and at no time exceeds $40^{\circ} \mathrm{C}$.
C. The altitude where the transformer is installed does not exceed 3300 feet ( 1000 meters).

## What are insulation classes?

Insulation classes were originally used to distinguish insulating materials operating at different temperatures. In the past, letters were used for the different designations. Recently, insulation system temperatures ( ${ }^{\circ} \mathrm{C}$ ) have replaced the letters' designations.

Insulation Classes
$\left.\begin{array}{ll}\text { Previous } & \begin{array}{l}\text { Insulation } \\ \text { System } \\ \text { Rating } \\ \text { ( }\end{array} \\ \text { Des) }\end{array}\right]$

## How do you know if the

 enclosure temperature is too hot?UL and CSA standards strictly regulate the highest temperature that an enclosure can reach. For ventilated transformers, the temperature of the enclosure should not increase by more than $50^{\circ} \mathrm{C}$ in a $40^{\circ} \mathrm{C}$ ambient at full rated current. For encapsulated transformers, the temperature of the enclosure should not increase by more than $65^{\circ} \mathrm{C}$ in a
$25^{\circ} \mathrm{C}$ ambient at full rated current. This means that it is permissible for the temperature of the enclosure to reach $90^{\circ} \mathrm{C}\left(194^{\circ} \mathrm{F}\right)$. Although this temperature is very warm to the touch, it is within the allowed standards. A thermometer should be used to measure enclosure temperatures, not your hand.

## Can transformers be reverseconnected (reverse-fed)?

Yes, with limitations. Eaton single-phase transformers rated 3 kVA and larger can be reverse-connected without any loss of kVA capacity or any adverse effects. Transformers rated 2 kVA and below, because there is a turns ratio compensation on the low voltage winding that adjusts voltage between no load and full load conditions, should not be reverse-fed.

Three-phase transformers with either delta-delta or delta-wye configurations can also be reverseconnected for step-up operation. When reversefeeding a delta-wye connected transformer, there are two important considerations to take into account: (1) The neutral is not connected, only the three-phase wires of the wye system are connected, and (2) the ground strap between X0 and the enclosure must be removed. Due to high inrush currents that may be created in these applications, it is recommended that you do not reverse-feed transformers rated more than 75 kVA . The preferred solution is to purchase an Eaton step-up transformer designed specifically for your application.

## Can transformers be connected in parallel?

Yes, with certain restrictions. For single-phase transformers being connected in parallel, the voltages and impedances of the transformers must be equal (impedances must be within 7.5\% of each other). For three-phase transformers, the same restrictions apply as for single-phase transformers, plus the phase shift of the transformers must be the same. For example, a delta-wye-connected transformer ( $30^{\circ}$ phase shift) must be connected in parallel with another delta-wye-connected transformer, not a delta-delta connected-transformer ( $0^{\circ}$ phase shift).

## Why is the impedance of a transformer important?

The impedance of a transformer is important because it is used to determine the interrupting rating and trip rating of the circuit protection devices on the load or line side of the transformer. To calculate the maximum short circuit current on the load side of a transformer, use the following formula:
$\underset{\text { Load Current (Amps) }}{\text { Maximum Short Circuit }}=$
Full Load Current (Amps) Transformer Impedance

Full load current for singlephase circuits is:

Nameplate Volt-Amps
Load (output) Voltage
and for three-phase circuits, the full load current is:
$\frac{\text { Nameplate Volts-Amps }}{\text { Load (output) Volts } \sqrt{3}}$
Example: For a standard three-phase, 75 kVA transformer, rated 480 volt delta primary and 208Y/ 120 volt secondary (catalog number V48M28T75J) and impedance equal to $5.1 \%$, the full load current is:

$$
\frac{75,000 \mathrm{VA}}{208 \mathrm{~V} \quad 1.732}=208.2 \mathrm{~A}
$$

The maximum short circuit load current is:
$\frac{208.2 \mathrm{~A}}{0.051}=4,082.4 \mathrm{~A}$
The circuit breaker or fuse on the secondary side of this transformer would have to have a minimum interrupting capacity of 4083 amperes at 208 volts. NEMA ST-20 (1992).

A similar transformer with lower impedance would require a primary circuit breaker or fuse with a higher interrupting capacity.

## What clearances are required around transformers when they are installed?

All dry-type transformers depend upon the circulation of air for cooling; therefore, it is important that the flow of air around a transformer not be impeded. UL 1561 requires that there be no less than 6 inches ( 152.4 mm ) clearance between any side transformer with ventilation openings and any wall or obstruction.
In compliance with
NEC 450.9, Eaton's ventilated transformers have a note on their nameplates requiring a minimum of 6 inches $(152.4 \mathrm{~mm})$ clearance from the ventilation openings and walls or other obstructions. This clearance only addresses the ventilation needs of the transformer. There may be additional local codes and standards that affect installation clearances.

Transformers should not be mounted in such a manner that one unit will contribute to the additional heating of another unit, beyond allowable temperature limits, for example, where two units are mounted on a wall one above the other.

| Integral power switching controls |  | Designed to meet specific sections of various codes impacting elevators |

## Product Description

Eaton's EZ box and EZ trim represents the first significant change in panelboard box and trim designs in more than a half-century. The EZ box and EZ trim have been designed for faster, more secure and safer installations. The new EZ box and EZ trim are provided standard for Eaton's Pow-R-Line 1a and Pow-RLine 2a lighting panelboards, as well as the Pow-R-Line 3a and Pow-R-Line 3E mid-range panelboard.

Flange Detail

## Features

- Virtually eliminates sharp edges
- Trim installs in seconds rather than minutes
- Door-in-door is standard
- Ability to adjust flush box to wall irregularities
- Trim installs without the need for tools
- No exposed hardware (because there is none)

The EZ box flanges are bent and painted, which virtually eliminates the sharp edges associated with traditional boxes. Additionally, all steel panelboard chassis parts are painted. This significantly reduces potential injury for material handlers and installers. Each flange is adjustable outward up to $3 / 4$-inch ( 19.1 mm ). This feature allows the installer to adjust flush box applications to be level and flat with the finished wall after the wall material is installed to help correct wall irregularities. The new box flange also provides the means for attaching the EZ trim.

Standalone Trim and Bottom Flange Hanger with Notch

Corner Flange Detail

## Fast Installation

The EZ trim incorporates a groundbreaking design that installs in seconds, rather than minutes. The standard trim features include door-in-door construction; no exposed hardware and no tools are required for installation.
Each EZ trim includes hangers attached on the right side. The bottom trim hanger has a notch in its base. To install, the bottom hanger is inserted into the bottom right side box flange opening, resting the notch on the flange.

## Trim Hanger Inserted Into Box Flange

The balance of the hangers are aligned with the other flange openings and pushed in. When all hangers are in the box flange, the trim is lifted up slightly to clear the notch on the bottom hanger, and the trim in self-supported on the EZ box.
The installation is completed by swinging the trim to the closed position, then lifting and pushing slightly to the right. The trim will drop into place totally secured. The multi-point catches on the left side of the trim will lock into the left side box flange openings.
To prevent the trim from being removed by non-authorized persons, a unique sliding means automatically latches in place when the trim door is closed. Along with a new lock, the EZ trim offers a high degree of door security.

## Standards and Certifications

When used with Eaton's panelboard chassis, EZ boxes and EZ trims meet the following applicable industry standards:

- UL 50 listed
- NEMA Standard PB1
- Federal specifications
- National Electrical Code

## Product Description

## Lighting and Distribution Panelboards

Eaton's assembled
panelboards are designed for sequence phase connection of branch circuit devices. This allows complete flexibility of circuit arrangement (single-, two- or three-pole) to allow balance of the electrical load on each phase.

Sturdy, rigid chassis assembly ensures accurate alignment of interior with panel front; prevents flexing and minimizes possibility of loosening or damage to current carrying parts during and after installation.

Four-point in-and-out adjustment of panel interior is provided to meet critical depth dimensions on flush installations. This compensates for possible misalignment of box at installation.
Main lugs are mechanical solderless type and approved for copper or aluminum conductors.

## Enclosures

Boxes are code-gauge galvanized steel, which include a painted box finished in ANSI-61 light gray to match the trim.

Standard panelboard cabinets are designed for indoor use. Alternate types are available for indoor and special purpose applications.
All enclosures are furnished in accordance with Underwriters Laboratories standards and include wiring gutters with proper wire bending space. Special cabinets can be provided at an additional charge.

The box dimensions shown are inside dimensions. For outside dimensions, add $1 / 4$-inch ( 6.4 mm ).

Standard panelboard boxes are supplied without knockouts (blank endwalls).

## Fronts

Fronts (trims) for all panelboards are made of code-gauge steel and have a high durability ANSI-61 light gray finish applied by a bakedon polyester powder coating paint system.

The fronts for lighting and appliance branch circuit panelboards and small power distribution panelboards include a door with rounded corners and concealed hinges. A flush-type latch and lock assembly is included. All locks are keyed alike. These trims are available in both surface- and flushmounted designs.

EZ Trim Features Standard Door-in-Door with No Exposed Hardware or Sharp Edges (no Tools are Required for Installation)

The Three-Piece Trim for Larger Power Distribution Panelboards Provides for Easy Handling and Installation
Fronts for power distribution panelboards utilize a unique breaker front cover design in which each device has a dedicated bolt-on steel cover. The individual covers form a single deadfront for the panelboard that is used in conjunction with two wiring gutter covers to complete the trim. A door is not finished as part of the standard offering on these panelboards but can be provided, for an additional charge, using a deeper than standard box.

## Application Description

## Panelboard Selection Factors

In selecting a panelboard, the following factors must be considered:

- Service (voltage and frequency)
- Interrupting capacity (fully or series rated)
- Ampere rating of main
- Ampere ratings of branches
- Environment

## Panelboard Short-Circuit Rating

The short-circuit rating of Eaton's assembled panelboards are test verified by, and listed with, Underwriters Laboratories (UL). Generally, these ratings are that of the lowest interrupting rated device in the panel.
Certain exceptions to this rule exist where branch devices have been UL tested in combination with specific main devices having a higher interrupting rating. Where these defined main devices and branch breaker combinations are utilized, the series short-circuit rating of the assembled panelboard will be the same as the tested rating of the approved rated main device in series with the branches. Available main and branch breaker combinations are tabulated starting on Page V2-T3-16.
All combinations shown are UL tested and listed.

These series ratings apply to panels having main devices, or main lug only panelboards fed remotely by the device listed in the series ratings chart as the main, for which UL listed tests were conducted.

## Service Entrance Equipment <br> The National Electrical Code (NEC) requires that:

- A panel used as service entrance equipment must be located near the point where the supply conductors enter the building
- A panelboard having main lugs only shall have a maximum of six service disconnects to de-energize the entire panelboard from the supply conductors. Where more than six disconnects are required, a main service disconnect must be provided
- A disconnectable electrical bond must be provided between the neutral and ground
- A service entrance type UL label must be factory installed
- Ground fault protection of equipment shall be provided for each service disconnect rated 1000A or more if the electrical service is a solidly grounded wye system of more than 150 V to ground, but not exceeding 600V phase-to-phase

Note: Service entrance panels must be identified as such on the order.

## Panelboard Standards

In 2008, both the National
Electrical Code (Article 408)
and UL 67 were updated to remove the mandated 42 -circuit limitation. Eaton offers panelboards with more than 42 circuits for those jurisdictions that have adopted the 2008 NEC or later.
For jurisdictions that have| not adopted the 2008 or later version of the National Electrical Code, the 42-circuit limitation for Lighting and Appliance Branch Panelboards remains in place. Check with your local code officials to determine specific jurisdiction status.

## Panelboard Installation

NEC requires that the operating handle of the topmost mounted device be no more than 6 feet 7 inches $(2006.6 \mathrm{~mm}$ ) above the finished floor and should be installed per NEC and manufacturer's instructions.

Additional boxes and fronts are required when the components required for one panelboard exceed the standard box dimensions.

## Multi-Section Panelboards

When two or more separate enclosures are required, separate fronts for each box are standard. A common front can be furnished at additional charge.
Interconnecting MultiSection Panelboards
When a panelboard, for connection to one feeder, must be furnished in more than one section (Box), each section must be furnished with main bus and terminals of the same rating, unless a main overcurrent device is provided in each section.

Sub-feed or through-feed provisions must also be included (and priced) to provide connection capability to the second section.

Note: Sub-feed or through-feed lugs cannot be used on any panelboard that is not protected by a single main overcurrent device either in the panelboard or immediately upstream, i.e., service entrance panelboards with main lugs only using the six disconnect rule.

## Sub-Feed Lugs

Sub-feed lugs (see figure below) are one means of interconnecting multi-section panels. The sub-feed (second set of) lugs are mounted directly beside the main lugs. These are required in each section except the last panel in the lineup. The feeder cables are brought into the wiring gutter of the first section and connected to the main lugs. Another set of the same size cables are connected to the sub-feed lugs (Section 1) and are carried over to the main lugs of the adjacent panel. Cross connection cables are not furnished by Eaton. Sub-feed lugs are only available on main lug only panels.

Note: Sub-feed lugs may not be used on main lug only (six disconnect rule) service entrance panels.

## Sub-Feed Lugs

## Through-Feed Lugs

Through-feed lugs (see figure below) are another method to interconnect multi-section panelboards. The incoming feeder cables are connected to the main lugs or main breaker at the bottom of panel (Section 1). Another set of lugs (through-feed) are located at the opposite end of the main bus. The interconnecting cables are connected to the throughfeed lugs in Section 1 and are carried over to the main lugs in Section 2. The connection arrangement could be reversed, i.e., main lugs at top; through-feed lugs at bottom end of panel. Cross cables are not furnished by Eaton.

Note: Through-feed lugs may not be used on main lug only (six disconnect rule) service entrance panels.
Through-Feed Lugs

## Multiple Section Panelboard-Flush Mounted

Shown below is the standard method for flush mounting multiple section lighting and distribution panelboards using standard flush trims.

Multiple Section Panelboard Flush MountedDimensions in Inches (mm)

## Overcurrent Protection

The following requirements will be found in the NEC:
Each lighting and appliance branch circuit panelboard shall be individually protected on the supply side by not more than two main circuit breakers or two sets of fuses having a combined rating not greater than that on the panelboard.

Pow-R-Line C Panelboards

## Branch Circuit Loading for Lighting Panels

The size of mains and branches should be selected based on the following:

- Motor circuits: NEC Article 430
- Diversity factor
- Provision for future loading

## Exception Number 1:

 Individual protection for a lighting panelboard is not required when the panelboard feeder has overcurrent protection not greater than that of the panelboard.
## Exception Number 2:

For existing installations individual protection for lighting panelboards is not required where such panelboards are used as service equipment in supplying an individual residential occupancy and where any bus supplying 15 or 20A circuits is protected on the supply side by an overcurrent device.

## Ambient Temperatures

The primary function of an overcurrent device is to protect the conductor and its insulation against overheating. In selecting the size of the devices and conductors, consideration should be given to the ambient temperature surrounding the conductors within and external to the panelboard. Cumulative heating within the panelboard may cause premature operation of the overcurrent protective devices.

Underwriters Laboratories test procedures are based, in part, on $80 \%$ loading of panelboard branch circuit devices. The NEC limits the loading of overcurrent devices in panelboards to $80 \%$ of rating where in normal operation the load will continue for three hours or more. Further derating may be required, depending on such factors as ambient temperature, duty cycle, frequency or altitude.

Exception: There is one exception to this rule in both UL and NEC. It applies to assemblies and overcurrent devices that have been listed for continuous duty at 100\% of its rating.

## Special Conditions

Standard panelboards, assembled with standard components, are adequate for most applications. However, special consideration should be given to those required for application under special conditions such as:

- Excessive vibration or shock
- Frequencies above 60 cycles
- Altitudes above 6600 feet (2011.7m)
- Damp environment (possible fungus growth)
- Compliance with federal, state and municipal electrical codes and standards

## Seismic Considerations

The Uniform Building Code ${ }^{\circledR}$ and the International Building Code, as well as local and state building codes, place an emphasis on seismic building design requirements. Electrical distribution systems are treated as attachments to the building and therefore, fall into this category.
All Eaton panelboards are seismic qualified at the highest possible level, and have been tested in accordance with ANSI C37.81. This standard quantifies actual earthquake conditions, as well as equipment seismic capability.

## Harmonic Currents

Standard panelboard neutrals are rated for $100 \%$ of the panelboard current. However, since harmonic currents can cause overheated neutrals, an option is provided for neutrals to be rated at 200\% (1200A maximum neutral for 600A main bus) of the panelboard phase current.

Panelboards with the 200\% rated neutral are UL listed as suitable for use with nonlinear loads.

Prior to specifying the 200\% rated neutral, Eaton recommends a harmonic survey be conducted of the distribution system, be it new or existing.

## Surge Protective Devices

The quality of power feeding sensitive electronic loads is critical to the reliable operation of any facility. In modern offices, hospitals, and manufacturing facilities, the most frequent causes of microprocessor-based equipment downtime and damage are voltage transients and electrical noise.

Electrical loads and microprocessor-based equipment are highly susceptible to both high and low energy transients. High energy transients include lightning induced surges and power company switching. These high energy transients can destroy components instantly.
More frequently the electrical system experiences low energy transients and high frequency noise.
The effects of continual low energy transients and high frequency noise can cause erratic equipment performance or sudden failure of electronic circuit board components.

Eaton can provide protective and diagnostic systems integral to panelboards. The surge protective device (SPD) is integrated into the panelboards using a "zero lead length" direct bus bar connection.

Pow-R-Line 4
The SPD protects sensitive electronic equipment from the damaging effects of high and low energy transients, as well as high frequency noise.

## Standards and Certifications

Eaton's panelboards are designed to meet the following applicable industry standards, except where noted:

- Underwriters Laboratories:
- Panelboards: UL 67
- Cabinets and Boxes: UL 50
Note: Only panelboards containing UL listed devices can be UL labeled.
- National Electrical Code
- NEMA Standards: PB 1
- Federal Specification W-P-115c:
- Circuit BreakersType I Class I
- Fusible SwitchType II Class

Note
(1) Fixed mounted only.

## Terminal Wire Ranges, Pressure-Type Al/Cu Terminals Except as Noted

Note: All terminal sizes are based on wire ampacities corresponding to those shown in NEC Table 310.16 under the $75^{\circ} \mathrm{C}$ insulation columns ( $75^{\circ} \mathrm{C}$ wire). The use of smaller size, (in circular mills), regardless of insulation temperature rating, is not permitted.

Where copper-aluminum terminals are supplied on designated panelboard types, best results are obtained if a suitable joint compound is applied when aluminum conductors are used.

Check Eaton's standard terminal sizes versus customer requirements. In particular, 400 and 800A breakers often require nonstandard lugs.

Optional 750 kcmil mechanical screw-type terminals are available upon request. Panelboard dimensions may be affected, refer to Eaton.

## Notes

(1) DC ratings apply to substantially non-inductive circuits.
(2) Two- and three-pole HACR rated.

3 $100 \%$ rated circuit breaker.
4) DC rating not available with electronic trip.

5 Available with integral ground fault protection.
© 100 k based on NEMA test procedure.

## Series Rated Combinations

Underwriters Laboratories permits panelboards to be labeled with a short-circuit rating of up to 200 kA symmetrical where UL listed combinations of main and branch circuit breakers are used.

These combinations consist of main breakers or fusible devices connected ahead of, and in series with approved conventional breakers used as branch devices.

Two arrangements are acceptable and comply with UL standards for panelboards. The main circuit breaker or fusible switch may be installed in the panel as a main device, or it may be mounted remote, (directly upstream) from the panel. In either case, the approved main and branch combinations must be followed. These arrangements are acceptable and are UL listed having been tested in accordance with UL 67 standards.

From the tables that follow, specific combinations of main devices (upstream) and branch devices (downstream), series connected and electrically adjacent in the system, may be selected to qualify the assembled panelboard for the short-circuit ratings shown.

## Applying Series Ratings

The following is provided to use the series rating tables on the following pages.

1. Determine the available system voltage and fault current.
2. Select the appropriate table using the system voltage.
3. Use the appropriate "Series Equipment Rating" column equal to, or greater than, the available fault current, to determine the allowable UL recognized combinations of main (upstream) and branch (downstream) overcurrent devices. Main devices are shown in bold/shaded areas. Respective branch breakers are shown directly below their associated main device. If a rating is not initially found in a column, first look to the columns to the right for higher "Series Equipment Ratings" within the same table. If still not found, use ratings from table of a higher system voltage (higher numbered table(s).

## Type PRL1a

## Product Description

- 240 Vac maximum
- Three-phase four-wire, three-phase three-wire, single-phase three-wire, single-phase two-wire
- 400 A maximum mains
- 100A maximum branch breakers
- Bolt-on or plug-on branch breakers
- Each branch connector is capable of up to a total of 140A maximum by breaker ampere rating
- Factory assembled
- Refer to Page V2-T3-7 for additional information

## Application Description

- Lighting branch panelboard
- Fully rated or series rated
- Interrupting ratings up to 200 kA symmetrical
- Suitable for use as Service Entrance Equipment, when specified on the order
- See Pages V2-T3-7 through V2-T3-23 for additional information

## Standards and Certifications

- UL 67, UL 50
- Federal Specification W-P-115c
- Refer to Page V2-T3-7 for additional information

## Notes

(1) Single-pole breakers are rated 120 Vac maximum.
(2) 50 A devices are available as two-pole only.
(3) GFCI for 5 mA personnel protection.
(4) GFP for 30 mA equipment protection.
(5) Arc fault circuit breaker.
© HID (High Intensity Discharge) rated breaker.
(7) Switching Neutral Breaker. single-pole device requires two-pole space, two-pole device requires three-pole space.
(8) Solenoid operated breaker.

## Box Sizing and Selection

Approximate Dimensions in Inches (mm)

## Assembled Circuit <br> Breaker Panelboards and Lighting Controls

Box size and box and trim catalog numbers for all standard panelboard types are found on
Page V2-T3-29.

## Instructions

1. Using description of the required panelboard select the rating and type of main required.
2. Count the total number of branch circuit poles, including provisions, required in the panelboard. Do not count main breaker poles. Convert twoor three-pole branch breaker to single-poles, i.e., three-pole breaker, count as three poles.

Determine sub-feed breaker or through-feed lug requirements.
3. Select the main ampere rating section from table on Page V2-T3-29.
4. Select panelboard type from first column, main breaker frame, if applicable, from second column, and sub-feed breaker frame, if applicable, from the third column.
5. From Step \#2, determine the number of branch circuits in Column 4.
6. Read box size, box and trim catalog numbers across columns to the right. Specify surface or flush mounting on the order.

## Cabinets

Fronts are code-gauge steel, ANSI-61 light gray painted finish.

Boxes are code-gauge galvanized steel without knockouts. Standard depth is $5-3 / 4$ inches ( 146.1 mm ). Standard width is 20 inches $(508.0 \mathrm{~mm}$ ). An optional 28 -inch ( 711.2 mm ) wide box is available.

Top and Bottom Gutters
5-1/2 inches ( 139.7 mm ) minimum.

Note
(1) Smaller panelboard box sizes are available if required. Contact Eaton for application information.

## Type PRL1aF

## Product Description

- 240 Vac maximum
- 400A maximum mains
- Three-phase four-wire, single-phase three-wire
- 30A maximum branch devices
- Factory assembled

## Application Description

- Lighting branch panelboards
- Instrument protection
- Fully rated
- Interrupting ratings up to 200 kA symmetrical when protected by fuse

## Box Sizing and Selection

Approximate Dimensions in Inches (mm)

## Assembled Circuit Breaker Panelboards

Box size and box and trim catalog numbers for all standard panelboard types are found on
Page V2-T3-33.

## Instructions

1. Using description of the required panelboard, select the rating and type of main required.
2. Count the total number of branch circuit poles, including provisions, required in the panelboard.

Determine through-feed lug requirements.
3. Select the main ampere rating section from table on Page V2-T3-33.
4. Select panelboard type from first column, main breaker frame.
5. From Step \#2, determine the number of branch circuits in Column 4.
6. Read box size, box and trim catalog numbers across columns to the right. Specify surface or flush mounting on the order.

## Cabinets

Fronts are code-gauge steel, ANSI-61 light gray painted finish.

Boxes are code-gauge galvanized steel without knockouts. Standard depth is $5-3 / 4$ inches ( 146.1 mm ). Standard width is 20 inches $(508.0 \mathrm{~mm}$ ). An optional 28 -inch ( 711.2 mm ) wide box is available.

## Top and Bottom Gutters

5-1/2 inches ( 139.7 mm ) minimum.

Approximate Dimensions in Inches (mm)

Note
(1) Smaller panelboard box sizes are available if required. Contact Eaton for application information.

## Pull Box With Extension Trough

Includes pull box with trough extension. For additional trough extensions, refer to table below.

| Description | Catalog <br> Number |
| :--- | :--- |
| Pullbox with 36-inch trough | XCTXB036 |
| Pullbox with 48-inch trough | XCTXB048 |
| Pullbox with 60-inch trough | XCTXB060 |
| Pullbox with 72-inch trough | XCTXB072 |
| Pullbox with 84-inch trough | XCTXB084 |

## Neutral Bars

When Column Type panels are furnished with trough extensions and pull box, the neutral bar will be placed in the pull box unless otherwise specified.

When troughs and pull box are not furnished, the neutral bar will be located on the panel at the same end as the main.

## Additional Trough Extensions

Width and depth are the same as the panelboard.

| Length <br> Inches (mm) | Catalog <br> Number |
| :--- | :--- |
| $36.00(914.4)$ | CTXB036 |
| $48.00(1219.2)$ | CTXB048 |
| $60.00(1524.0)$ | CTXB060 |
| $72.00(1828.8)$ | CTXB072 |
| $84.00(2133.6)$ | CTXB084 |

## Notes

(1) 240 V breakers must be used on three-phase, three-wire, 240 V delta systems or on the high leg of a midpoint delta grounded system.
(2) Single-pole breakers are rated 120 Vac maximum.
(3) 50A devices are available as two-pole only.
(4) GFCI for 5 mA personnel protection.
(5) GFP for 30 mA equipment protection.
(6) Arc fault circuit breaker.
(7) Solenoid operated breaker.

## Box Sizing and Selection

Approximate Dimensions in Inches (mm)

## Assembled Circuit Breaker Panelboards

Box size, box and trim catalog numbers for standard Column Type panelboards listed are available from tables on

## Page V2-T3-37.

## Instructions

1. Using description of the required panelboard, select the rating and type of main required.
a. 100A panelboardsPage V2-T3-37.
b. 225A panelboardsPage V2-T3-37.
2. Count the total number of branch circuit poles, including provisions, required in the panelboard. Do not count main breaker poles. Convert two- or threepole branch breaker to single poles, i.e., threepole breaker, count as three poles. Determine sub-feed breaker or through-feed lug requirements.
3. Select the panelboard main ampere rating from tables on Page V2-T3-37.
4. Panelboard Type from first column, main breaker Frame and Designation, if applicable from second column, and sub-feed breaker Frame and Designation, if applicable, from the third column.
5. From Step \#2, determine the number of branch circuits in Column 4.
6. Read box size, box and trim catalog numbers across columns to the right. All panels are surface mounted.

## Cabinets

Boxes and trims are codegauge steel, ANSI-61 light gray painted finish.
Boxes are furnished without knockouts. Standard depth is 6.00 inches ( 152.4 mm ).
Standard width is
8.63 inches ( 219.1 mm ).

Top and Bottom Gutters
4.50 inches ( 114.3 mm ) minimum.

## Left Side Gutter

4.38 inches ( 111.2 mm ) minimum.

## Pull Box

Pull box is furnished without knockouts. Standard dimensions:

Pull Box Dimensions

| Height | Width | Depth |
| :--- | :--- | :--- |
| $12.00(304.8)$ | $16.00(406.4)$ | $6.00(152.4)$ |

PRL1a-LX Trough Extension

## Trough Extension

When extension troughs are used, Section 376 of the National Electrical Code, reading as follows, should be observed: 376. Number of Conductors. Wireways shall not contain more than 30 conductors at any cross section, unless the conductors are for signal circuits or are control conductors between a motor and its starter and used only for starting duty. The sum of the cross-sectional areas of all contained conductors at any cross section of a wireway shall not exceed $20 \%$ of the interior crosssectional area of the wireway.

## Type PRL2a

## Product Description

- 480Y/277 Vac maximum (125 Vdc)
- Three-phase four-wire, three-phase three-wire, single-phase three-wire, single-phase two-wire
- 600 A maximum mains
- 100 A maximum branch breakers
- Bolt-on branch breakers
- Each branch connector is capable of up to a total of 140 A maximum by breaker ampere rating
- Factory assembled
- Refer to Page V2-T3-7 for additional information

## Application Description

- Lighting branch panelboard
- Fully rated or series rated
- Interrupting ratings up to 200 kA symmetrical
- Suitable for use as Service Entrance Equipment, when specified on the order
- See Pages V2-T3-7 through V2-T3-23 for additional information

Note
(1) Smaller panelboard box sizes are available if required. Contact Eaton for application information.

## Type PRL2aF

## Product Description

- 240 Vac maximum
- 400A maximum mains
- Three-phase four-wire, single-phase three-wire
- 30A maximum branch devices
- Factory assembled

## Application Description

- Lighting branch panelboard
- Instrument protection
- Fully rated
- Interrupting ratings up to 200 kA symmetrical when protected by fuse

Panelboards and Lighting Control
Pow-R-Line C Panelboards

## Box Sizing and Selection

Approximate Dimensions in Inches (mm)

## Assembled Circuit Breaker Panelboards

Box size and box and trim catalog numbers for all standard panelboard types are found on

## Page V2-T3-45.

## Instructions

1. Using description of the required panelboard, select the rating and type of main required.
2. Count the total number of branch circuit poles, including provisions, required in the panelboard.

Determine through-feed lug requirements.
3. Select the main ampere rating section from table on Page V2-T3-45.
4. Select panelboard type from first column, main breaker frame, if applicable, from second column.
5. From Step \#2, determine the number of branch circuits in Column 4.
6. Read box size, box and trim catalog numbers across columns to the right. Specify surface or flush mounting on the order.

## Cabinets

Fronts are code-gauge steel, ANSI-61 light gray painted finish.

Boxes are code-gauge galvanized steel without knockouts. Standard depth is $5-3 / 4$ inches ( 146.1 mm ). Standard width is 20 inches ( 508.0 mm ). An optional 28 -inch ( 711.2 mm ) wide box is available.

## Top and Bottom Gutters

5-1/2 inches ( 139.7 mm ) minimum.

Approximate Dimensions in Inches (mm)

## Note

(1) Smaller panelboard box sizes are available if required. Contact Eaton for application information.

## Type PRL2a-LX, Column Type

## Type PRL2a-LX

## Product Description

- 480Y/277 Vac maximum (125 Vdc)
- Three-phase four-wire, three-phase three-wire, single-phase three-wire, single-phase two-wire
- 225A maximum mains
- 100A maximum branch breakers
- Bolt-on branch breakers
- Factory assembled
- Refer to Refer to Page V2-T3-7 for additional information

## Application Description

- Lighting branch panelboard
- Column mounting width
- Fully rated or series rated
- Interrupting ratings up to 200 kA symmetrical
- See Pages V2-T3-7 through V2-T3-23 for additional information

Pull Box With
Extension Trough
Includes pull box with trough extension. For additional trough extensions, refer to table below.

| Description | Catalog <br> Number |
| :--- | :--- |
| Pullbox with 36-inch trough | XCTXB036 |
| Pullbox with 48-inch trough | XCTXB048 |
| Pullbox with 60-inch trough | XCTXB060 |
| Pullbox with 72-inch trough | XCTXB072 |
| Pullbox with 84-inch trough | XCTXB084 |

## Neutral Bars

When Column Type panels are furnished with trough extensions and pull box, the neutral bar will be placed in the pull box unless otherwise specified.
When troughs and pull box are not furnished, the neutral bar will be located on the panel at the same end as the main.

Additional Trough
Extensions
Width and depth are the same as the panelboard.

| Length <br> Inches (mm) | Catalog <br> Number |
| :--- | :--- |
| $36.00(914.4)$ | CTXB036 |
| $48.00(1219.2)$ | CTXB048 |
| $60.00(1524.0)$ | CTXB060 |
| $72.00(1828.8)$ | CTXB072 |
| $84.00(2133.6)$ | CTXB084 |

## Notes

(1) Interrupting ratings in this column are applicable to 120 Vac for single-pole breakers.
(2) At 480 V , must be used on $480 \mathrm{Y} / 277 \mathrm{~V}$ grounded wye systems only.
(3) Solenoid operated breaker.
(4) GFP for 30 mA equipment protection. Requires two pole spaces.

## Box Sizing and Selection

Approximate Dimensions in Inches (mm)

## Assembled Circuit Breaker Panelboards

Box size, box and trim catalog numbers for standard column type panelboards listed are available from tables on

## Page V2-T3-49.

## Instructions

1. Using description of the required panelboard, select the rating and type of main required.
a. 100A panelboardsPage V2-T3-49.
b. 225A panelboardsPage V2-T3-49.
2. Count the total number of branch circuit poles, including provisions, required in the panelboard. Do not count main breaker poles. Convert twoor three-pole branch breaker to single poles, i.e., three-pole breaker, count as three poles.

Determine sub-feed breaker or through-feed lug requirements.
3. Select the panelboard main ampere rating from tables on Page V2-T3-49.
4. Panelboard Type from first column, main breaker Frame and Designation, if applicable from second column, and sub-feed breaker Frame and Designation, if applicable, from the third column.
5. From Step \#2, determine the number of branch circuits in Column 4.
6. Read box size, box and trim catalog numbers across columns to the right. All panels are surface mounted.

## Cabinets

Boxes and trims are codegauge steel, ANSI-61 light gray painted finish.
Boxes are furnished without knockouts. Standard depth is 6.00 inches ( 152.4 mm ).
Standard width is
8.63 inches ( 219.1 mm ).

Top and Bottom Gutters 4.50 inches ( 114.3 mm ) minimum.

## Left Side Gutter

3.31 inches ( 84.2 mm ) minimum.

## Pull Box

Pull box is furnished without knockouts. Standard dimensions:

Pull Box Dimensions

| Height | Width | Depth |
| :--- | :--- | :--- |
| $12.00(304.8)$ | $16.00(406.4)$ | $6.00(152.4)$ |

PRL2a-LX Trough Extension

## Trough Extension

When extension troughs are used, Section 376 of the National Electrical Code, reading as follows, should be observed: 376. Number of Conductors. Wireways shall not contain more than 30 conductors at any cross section, unless the conductors are for signal circuits or are control conductors between a motor and its starter and used only for starting duty. The sum of the cross-sectional areas of all contained conductors at any cross section of a wireway shall not exceed $20 \%$ of the interior crosssectional area of the wireway.

## Retrofit Panelboard

## Product Description

- PRL1R-240 Vac; PRL2R-480Y/277V
- Single-phase three-wire or single two-wire
- Three-phase three-wire or three-phase four-wire
- 225A maximum
- 100A maximum branch breakers
- Standard PRL1R fits existing box depths from 4.50-6.00 inches deep; Standard PRL2R fits existing box depths from 4.75-6.00 inches deep (without additional accessories)
- Integrally mounted neutral assembly
- Grounding lug included
- Neutral and ground convertible from left-right
- Bolt-on branch breakers
- Factory assembled

## Application Description

- Lighting branch panelboard
- Fully rated or series rated
- Interrupting capacities to 100 kA symmetrical
- Suitable for use as Service Entrance Equipment where specified on the order

## Standards and Certifications

- UL 67
- Federal Specification W-P-115c
- CSA C22.2 No. 29

## Catalog Number Selection

Retrofit Panelboard

Trim Selection

## Notes

(1) P2R only.
(2) Flush trims include 1-inch overlap per side.
(3) Standard trim includes 12-gauge steel painted ANSI 61 grey.
(4) Stainless trims provided as 304 standard. Optional 316 available.

## Notes

(1) Standard trim included. Select standard trim from Page V2-T3-54. Custom trims are available for an additional charge. Contact your local Satellite for more information about custom trims.
(2) BAB and $Q B H W$ main devices consume available circuit space positions. (Two circuits for single-phase; three circuits for three-phase.)
${ }^{(3)}$ Add main breaker ampere rating suffix. May NOT exceed main bus rating.
A neutral assembly is included with the base chassis. For single-phase two-wire systems or for three-phase, three-wire systems, do not connect.
Sum of branch circuit amperes not to exceed 140A.

## Notes

(1) GHB main devices consume available circuit space positions. (Three circuits for three-phase.)
(2) Add main breaker ampere rating suffix. May NOT exceed main bus rating.

A neutral assembly is included with the base chassis.

## Pow-R-Line C Panelboards

## Trim Selection

## Instructions

- In order to meet minimum wire bending space requirements and to ensure ease of installation, minimum enclosure space dimensions have been defined for each chassis. In order to ensure a proper fit, every panelboard to be renovated must be carefully surveyed prior to installation
- Determine the electrical requirements of the
panelboard to be renovated (i.e., main breaker or main lugs, amperes, interrupting rating, circuit space, branch breakers, accessories)
- Using the electrical requirement data, select a base chassis and any required breakers, options and accessories
- Page V2-T3-56 provides the minimum dimensions of the enclosure, in which each base chassis may
be installed. These dimensions assume that the chassis is mounted in the center of the existing box, both vertically and horizontally. Where site conditions require the chassis to be offset from this centrally mounted position, it is the installer's responsibility to ensure wire bending space and electrical clearance requirements are met

Standard Trim Selection - 14-Inch (355.6 mm) Wide Enclosure

## Custom Trim Selection

## Instructions

In order to accommodate instances where the standard trims do not suit an installation, custom-sized trims may be ordered. Since the trim mounts to the retrofit chassis, and not the existing enclosure, custom trims can solve many problems encountered with differing enclosure sizes and configurations. Contact your local satellite plant to ensure manufacturability and determine lead time required.

## Outer Dimensions

The outer dimensions are the overall OUTSIDE dimensions of the trim. In surfacemounted applications, this is usually the same as the outside dimensions of the enclosure to be renovated. For flush-mounted applications, an additional amount of trim material extends beyond the outer edge of the box, in order to cover any gap between the wall material and the box. Extending the outer dimensions can cover larger than normal wall gaps or imperfections that may be encountered.

## Pow-R-Line C Panelboards

## Application Guidelines

## Instructions

- In order to meet minimum wire bending space requirements and to ensure ease of installation, minimum enclosure space dimensions have been defined for each chassis. In order to ensure a proper fit, every panelboard to be renovated must be carefully surveyed prior to installation
- Determine the electrical requirements of the panelboard to be renovated
(i.e., main breaker or main lugs, amperes, interrupting rating, circuit space, branch breakers, accessories)
- Using the electrical requirement data, select a base chassis and any required breakers, options and accessories
- This page provides the minimum dimensions of the enclosure, in which each base chassis may be installed. These dimensions
assume that the chassis is mounted in the center of the existing box, both vertically and horizontally. Where site conditions require the chassis to be offset from this centrally mounted position, it is the installer's responsibility to ensure wire bending space and electrical clearance requirements are met. Installing chassis offset from the central position requires a custom offset trim.

Contact your local Satellite for pricing and ordering details

- The table below provides a "Trim Door Size Code." Using this code, select a standard trim from the tables that will fit the outside dimensions of the existing box. Refer to Page V2-T3-55 to define nonstandard trim requirements

Minimum Enclosure Sizing

| Ampere <br> Rating | Number of <br> Circuits | Main Device <br> Type | Trim Door <br> Size Code | Minimum Enclosure Dimensions——nches (mm) <br> Height | Width |

| Box collar | 3.50-4.50 (88.9-114.3) | P1RBC10 |
| Notes |  |  |
| (1) Single-pole breakers are rated 120 Vac maximum. |  |  |
| ${ }^{\text {2 }}$ ( 50 A devices available as two-pole only. |  |  |
| (3) Remote controllable circuit breaker. |  |  |
| (4) GFCI for 5 mA personnel protection. |  |  |
| (5) GFP for 30 mA equipment protection. |  |  |
| (6) Arc fault circuit breaker. |  |  |
| (7) HID (High Intensity Discharge) rated breaker. |  |  |
| (8) Switching neutral breaker. Single-pole device requires two pole spaces; two-pole device requires three pole spaces. |  |  |
| (9) GFP for 30 mA equipment protection. Requires two-pole spaces. 277 Vac only. |  |  |
| (0) HID (High Intensity Discharge) rated breaker. |  |  |
| (11) To convert base chassis catalog number from aluminum main bus to copper main bus, change the 6th digit of the aluminum base chassis catalog number to "C" (e.g., P1RL1A1-42 becomes P1RL1C1-42). |  |  |
| (2) Each base chassis includes a neutral bar that contains one connection point for every circuit space available. Use this kit when additional connection points are required or the neutral must be separately mounted to meet existing cable locations. |  |  |
| ${ }^{(3)}$ Allows for panel to be used in boxes deeper than 6.00 inches. |  |  |
| (44) Allows for panel to be used in boxes less than 4.50 inches. |  |  |

## Type PRL3a

## Product Description

- 600 Vac maximum (250 Vdc)
- Three-phase four-wire, three-phase three-wire, single-phase three-wire, single-phase two-wire
- 800A maximum main lugs
- 600A maximum main breaker
- 225A maximum branch breakers
- Bolt-on branch breakers
- Factory assembled
- Refer to Page V2-T3-7 for additional information

## Application Description

- Lighting panelboard or power distribution panelboard
- Fully rated or series rated
- Interrupting ratings up to 200 kA symmetrical
- Suitable for use as Service Entrance Equipment, when specified on the order
- See Pages V2-T3-7 through V2-T3-23 for additional information

## Notes

(1) 800 A MLO requires 28 -inch ( 711.2 mm ) wide box
(2) 100,000 based on NEMA test procedure.
(3) Top feed only.
(4) Requires 6.50 -inch ( 165.1 mm ) deep box. Not available in Type 3R, 12, 4 and 4 X enclosures.
(5) $100 \%$ rated circuit breaker. Requires copper bus. Not available in Type 12,4 and 4 X enclosures.

## Notes

(1) 50 A devices are available as two-pole only.
(2) Single-pole breaker rated 120 Vac .
(3) Two-pole breaker rated 120/240 Vac.
(4) Arc fault circuit breaker.

5 HID (High Intensity Discharge) rated breaker.
(6) Switching Neutral Breaker. single-pole device requires two-pole space, two-pole device requires three-pole space.
(7) Solenoid operated breaker.
(8) Single-pole breaker rated 277 Vac.
(9) For use on $480 \mathrm{Y} / 277 \mathrm{~V}$ systems only
(10) AIC rating for two- and three-pole breakers only.
(11) Maximum of six breakers per panel, 175-225A.

## Box Sizing and Selection

Approximate Dimensions in Inches (mm)

## Panel Layout Instructions

1. Select:
a. Required mains (lugs or breaker).
b. Neutral where required.
c. Branch circuits as required.
2. Layout panel as shown below, using appropriate " $X$ " dimensions.
3. Using total $X$ units (panel height) find box height in inches (mm) and box catalog number from table below. (When total $X$ units come out to an uneven number, use next highest number; i.e., if total $X$ comes out 25 X , use 31X.)

Layout-PRL3a

## Notes

(1) GHB, HGHB and GHO breakers cannot be mixed on same connector as BAB, QBHW, BABRP and BABRSP.
(2) Maximum of six breakers per panel.
(3) Horizontal mounted 15-150A main breakers EHD, FDB, FD, FDE, HFD, HFDE and FDC, will be furnished as branch breaker construction. Branch breakers single-, two- or three-pole as required, may be located opposite these main breakers.
(4) If optional terminal kit 3TA225FDK is required, use 10X
(5) FB-P and LA-P top mounting only.
© LCL or LA-P main breaker requires 6-1/2-inch (165.1 mm) deep box.

## Layout Example

1. Description of Panel

Type PRL3a three-phase, four-wire, 120/208 Vac flush mounting. Panel to have short-circuit rating of 22,000 symmetrical amperes. Main breaker 400A, three-pole, bottom mounting. Branch circuits bolt-on as follows:
12-200A single-pole OBHW
1-200A three-pole ED
1-225A three-pole ED
2. Layout Information from Layout-PRL3a table (left):
a. 400A Neutral . . . . . . . . . . . . $=8 \mathrm{X}$
b. 12-poles of QBHW ....... $=5 \mathrm{X}$
c. Two three-pole ED breakers . . $=6 \mathrm{X}$
d. Main breaker, 400A,

Three-pole DK . . . . . . . . . . = $=15 \mathrm{X}$
Total Height . . . . . . . . . . . . $=34 \mathrm{X}$
3. From Box Tabulation-PRL3a table (below):
a. 34X Height (use 40X box)
b. Box Height 72 inches ( 1828.8 mm )
c. Box Catalog Number . . . . . . . YS2072 or EZB2072R

## Cabinets

Fronts are code-gauge steel,
ANSI-61 light gray painted finish.

Boxes are code-gauge galvanized steel without knockouts. Standard depth is 5-3/4 inches ( 146.1 mm ).
Standard widths are:
20-inch ( 508.0 mm )
100-600A.
28-inch ( 711.2 mm )
800A.

## Standard Depth

5-3/4 inches ( 146.1 mm ).

## Top and Bottom Gutters

5-1/2 inches ( 139.7 mm ) minimum.

## Side Gutters

4 inches ( 101.6 mm) minimum.

## Application Description

- Lighting and appliance branch panelboard
- Fully rated or series rated
- Interrupting ratings up to 200 kA symmetrical
- Suitable for use as Service Entrance Equipment, when specified on the order
- See Pages V2-T3-7 through V2-T3-23 for additional information

## Product Selection

Panelboards and Lighting Control
Pow-R-Line C Panelboards

## Box Sizing and Selection

Approximate Dimensions in Inches (mm)

## Assembled Circuit Breaker Panelboards and Lighting Controls

Box size and box and trim catalog numbers for all standard panelboard types are found on Page V2-T3-65.

## Instructions

1. Using description of the required panelboard, select the rating and type of main required.
2. Count the total number of branch circuit poles, including provisions, required in the panelboard. Do not count main breaker poles. Convert twoor three-pole branch breaker to single-poles, i.e., three-pole breaker, count as three poles. Determine sub-feed breaker or through-feed lug requirements.
3. Select the main ampere rating section from Page V2-T3-65.
4. Select panelboard type from first column, main breaker frame, if applicable, from second column, and sub-feed breaker frame, if applicable, from the third column.
5. From Step \#2, determine the number of branch circuits in Column 4.
6. Read box size, box and trim catalog numbers across columns to the right. Specify surface or flush mounting on the order.

## Cabinets

Fronts are code-gauge steel, ANSI-61 light gray painted finish.
Boxes are code-gauge galvanized steel without knockouts. Standard depth is $5-3 / 4$ inches ( 146.1 mm ). Standard width is 20 inches ( 508.0 mm ). An optional 28 -inch ( 711.2 mm ) wide box is available.

## Top and Bottom Gutters

 5-1/2 inches ( 139.7 mm ) minimum.Approximate Dimensions in Inches (mm)

PRL3E Panelboard Sizing

## Note

(1) Smaller panelboard box sizes are available if required. Contact Eaton for application information.

## 3

Type PRL4B Circuit Breaker and Type PRL4F Fusible Panelboards

## Type PRL4

## Product Description

- 600 Vac maximum ( 600 Vdc )
- Three-phase, four-wire, three-phase three-wire, single-phase three-wire, single-phase two-wire
- PRL4B circuit breaker panelboard
- PRL4F fusible switch panelboard
- 1200A maximum mains
- 1200A maximum branch devices
- Bolt-on branch devices
- Factory assembled
- Refer to Page V2-T3-7 for additional information

## Application Description

- Power distribution panelboard
- Fully rated or series rated
- Interrupting ratings up to 200 kA symmetrical
- Suitable for use as Service Entrance Equipment, when specified on the order
- See Pages V2-T3-7 through V2-T3-23 for additional information

PRL4 Main Fusible Switches

## Notes

(1) For ground fault protection on main devices, see Modification 14-Applies to 310 and 310+ Trip Units on Page V2-T3-102 or Modification 15 on Page V2-T3-102.
(2) For use on DC systems only.
(3) $100 \%$ rated breaker. Requires copper bus. Not available in Type 12, 4 and $4 X$ enclosures.
(4) Breaker only available in three-pole frame.
(5) Requires 44 -inch $(1117.6 \mathrm{~mm})$ wide box.
(6) For ground fault protection on main devices, see Modification 15 on Page V2-T3-102
(7) Fuses not included. Specify required fuse clips on all switches.
(8) Class J Fuse provisions are applicable only to 600 V units. When required, use dimensions of 600 V units for all voltages 600 and below.
(9) No DC rating on 600, 800 and 1200A switches

## Notes

(1) 50A devices are available as two-pole only
(2) Single-pole breakers rated 120 Vac .
(3) Two-pole breakers rated 120/240 Vac.
4. Arc fault circuit breaker.
(5) Single-pole breakers rated 277 Vac .

6 For use on DC systems only.
(7) At 480V, must be used on $480 \mathrm{Y} / 277 \mathrm{~V}$ grounded wye systems only.
(8) AIC rating for two- and three-pole breakers only.
(9) 100\% rated breaker. Requires copper bus. Not available in Type 12, 4 and 4 X enclosures.
(1) Breaker only available in three-pole frame.
(11) Available in single branch mounting only.

PRL4 Branch Devices, continued

FDPW and FDPB Switch Ratings, 240 or 600 Vac

| Ampere Rating | Fuse Class Used | Short-Circuit Ratings (kA Symmetrical) |
| :---: | :---: | :---: |
| 30-100 | R, J © | 200 |
| 200 Single | R, J (5) | 200 |
| 200 Twin | R © , J © , T | 200 |
| 400,600 ( ${ }^{\text {(7) }}$ | $\mathrm{R}{ }^{(1)}, ~{ }^{(5)}, \mathrm{T}$ | 200 |
| $800,1200{ }^{(3)}$ | L | 200 |

## Notes

(1) 100 kAIC based on NEMA test procedure.
(2) Fuses not included. Specify required fuse clips on all switches. (T fuse clips not available for 200/200 twin switches.)
(3) When branches of a twin unit are of different ampere ratings, as a 30-60 twin unit, price and layout as a 60-60 twin unit; when a 60-100 twin unit, price and layout as a 100-100 twin unit.
(4) No DC rating on 600,800 and 1200 A switches.
(5) Class J fuse provisions are applicable to 600 V units. When required, use price and dimensions of 600 V units for all voltages 600 V and below.
(6) Twin 200A switches are not available with Class R fuse clips at 600V.
(7) When shunt trip is required, 400-600A switches used with Class R fuses are rated 100 kAIC .

## Pow-R-Line C Panelboards

## Box Sizing and Selection-PRL4B

Approximate Dimensions in Inches (mm)

Main Lug Only (MLO), Main Breaker, Neutral, Through-Feed Lug (TFL) and Sub-Feed Lug (SFL) "X" Space Requirements. (For other configurations not shown, refer to Eaton.)

* = $\begin{aligned} & \text { Space available for branch devices. For device sizing, } \\ & \text { see Page V2-T3-72. }\end{aligned}$

## PRL4B Layout

Standard Main Lug, Through-Feed and Sub-Feed Lugs (1) (500 kcmil Maximum)

Main Breaker with Neutral (when required) (500 kcmil Maximum)

Available with 38 X and 50 X Panel Height only.

Optional Main Lugs, Through-Feed and Sub-Feed Lugs (1) (750 kcmil Maximum)

Note
(1) Sub-feed lugs are available 250-600A. For 600A, use 1200A "A" space.

## Approximate Dimensions in Inches (mm)

## Panel Layout and Dimensions

To determine the dimensions of a given panelboard enclosure, make a layout sketch by fitting together the main, branch and lug modules according to the appropriate tables in the layout guide. Assign " X " units to each module as shown and obtain a total " X " number.

The height of the enclosure is related to the total " $X$ " units in the layout as shown in table on right. Three standard box heights are available to accommodate any and all layout arrangements. " X " unit totals that do not exactly match those in table on right must be rounded off to the next highest standard (26X, 38X, 50X).

If a calculated " X " total for a panel exceeds 50X, the panel must be split into two or more separate sections with " X " space for through-feed lugs figured in for all but one section. If a neutral is required, a separate neutral bar and appropriate " $X$ " space must be included in each section.

## Layout Example

- 1-PRL4B panelboard, 480Y/277 volt, three-phase four-wire 65 kA, 800A, main lug, consisting of:
- 12-20A/single-pole HFD
- 2-250A/three-pole HJD
- 1-400A/three-pole HKD

## Reference PRL4B Layout Example

1. From layout guide, total " X " height of panel = 26X, (which is a design standard and no rounding off is necessary).
2. From table on right, enclosure height for 26X panel = 57 inches ( 1447.8 mm ).
3. Width $=24$ inches ( 609.6 mm )—directly from layout guide.
4. Enclosure depth = 11.31 inches ( 287.0 mm ) -standard for all PRL4 panelboards.
PRL4B Layout Example

| 20A/1P | 20A/1P | 1X |

| Main Lugs | $800 \mathrm{~A}$ | 10X |

Box Dimensions-PRL4B

| "X" <br> Units | Catalog <br> Number | Height | Width | Depth ${ }^{(1)}$ |
| :--- | :--- | :--- | :--- | :--- |
| $26 X$ | BX2457 | $57.00(1447.8)$ | $24.00(609.6)$ | $11.31(287.0)$ |
| $38 X$ | BX2473 | $73.50(1866.9)$ | $24.00(609.6)$ | $11.31(287.0)$ |
| $50 X$ | BX2490 | $90.00(2286.0)$ | $24.00(609.6)$ | $11.31(287.0)$ |
| $38 X$ | BX3673 | $73.50(1866.9)$ | $36.00(914.4)$ | $11.31(287.0)$ |
| $50 X$ | BX3690 | $90.00(2286.0)$ | $36.00(914.4)$ | $11.31(287.0)$ |
| $38 X$ | BX4473 | $73.50(1866.9)$ | $44.00(1117.6)$ | $11.31(287.0)$ |
| $50 X$ | BX4490 | $90.00(2286.0)$ | $44.00(1117.6)$ | $11.31(287.0)$ |

## Top and Bottom Gutters

10.63-inch ( 269.9 mm ) minimum.

## Side Gutters-Minimum

24.00 -inch ( 609.6 mm ) wide box- 5.00 -inch ( 127.0 mm ).
36.00 -inch ( 914.4 mm ) wide box- 6.00 -inch ( 152.4 mm ).
44.00 -inch ( 1117.6 mm ) wide box- 8.00 -inch ( 203.2 mm ).

## Notes

(1) Box depth is 10.40 inches ( 264.2 mm ), cover adds 0.90 inches $(22.9 \mathrm{~mm})$ to depth.

800A maximum bus size in 24.00 -inch ( 609.6 mm ) wide box. Flush trims not available on PRL4B panels.

Layout for Branch and Horizontally Mounted Main Devices Layout-PRL4B

## Notes

(1) BAB and QBHW breakers with shunt trips require one additional pole space, i.e., single-pole is two-pole size, two-pole is three-pole size, and three-pole is four-pole size.
(2) If panel contains only BAB or QBHW branch breakers, use a PRL1a panelboard.
(3) GHB, HGHB or GHQ breakers cannot be mixed on same subchassis as BAB, QBHW
(4) If panel contains only GHB, HGHB or GHO branch breakers, use a PRL2a panelboard.
(5) When only one single-pole breaker of the group is required on either side of chassis, the single-pole breaker space required changes from 1 X to 2 X .
(6) Minimum 36 -inch ( 914.4 mm ) wide box is required if optional \#6-300 kcmil lug is required.
(7) MDL main breaker in 24-inch ( 609.6 mm ) wide box, refer to Page V2-T3-70.
(8) Optional 750 kcmil terminal requires 44 -inch ( 1117.6 mm ) wide box.
(9) For use on DC systems only.

See Page V2-T3-70 for MLO or Neutral and Vertically Mounted Mains space requirements.

## Box Sizing and Selection-PRL4F

Approximate Dimensions in Inches (mm)
Main Lug (MLO), Main Switch, Neutral, Through-Feed (TFL) and Sub-Feed Lug (SFL) "X" Space Requirements. (For other

* = Space available for branch devices. For device sizing, see Page V2-T3-75. configurations not shown, refer to Eaton.)

$$
\bullet \text { = Blank means no bus under cover, to meet NEC cable }
$$ bending space.

## PRL4F Layout

Main Switch with Neutral (when required) ( 500 kcmil Maximum)

200A, 400A,

Standard Main Lug, Through-Feed and Sub-Feed Lugs (1)
(500 kemil Maximum)

Optional Main Lugs, Through-Feed and Sub-Feed Lugs (1) (750 kcmil Maximum)

## Notes

(1) Sub-feed lugs are available 250-600A. For 600A, use 1200A "A" space.
(2) 800 A and 1200 A mains available only in vertical mounting.

Approximate Dimensions in Inches (mm)

## Panel Layout and Dimensions

To determine the dimensions of a given panelboard enclosure, make a layout sketch by fitting together the main, branch and lug modules according to the appropriate tables in the layout guide. Assign " $X$ " units to each module as shown and obtain a total " $X$ " number.
The height of the enclosure is related to the total " $X$ " units in the layout as shown in table on right. Three standard box heights are available to accommodate any and all layout arrangements. " X " unit totals that do not exactly match those in table on right must be rounded off to the next higher standard (38X, 50X).

If a calculated "X" total for a panel exceeds 50X, the panel must be split into two or more separate sections with " X " space for through-feed lugs figured in for all but one section. If a neutral is required, a separate neutral bar and appropriate " X " space must be included in each section.

## Layout Example

- PRL4F, three-phase four-wire, 208Y/120 volt complete with 400A main switch and the following branches:
- One 200A/three-pole
- Two 100A/three-pole
- Two 30A/three-pole

Panel to have short-circuit rating of 100 kA symmetrical.

## Reference PRL4F Layout Example

1. From layout guide, total " $X$ " height of panel $=43 \mathrm{X}$.
2. Rounded off to next higher standard $=50 \mathrm{X}$.
3. From table on right, enclosure height for 50X panel = 90 inches $(2286.0 \mathrm{~mm}$ ).
4. Width $=36$ inches ( 914.4 mm ).
5. Enclosure depth is standard for all PRL4 panelboards $=11.31$ inches ( 287.0 mm ).

Type PRL4F
Layout Example

| 400 A Neutral |  | 7 X |
| :---: | :---: | :---: |
| $30 \mathrm{~A} / 3 \mathrm{P}$ | $30 \mathrm{~A} / 3 \mathrm{P}$ | 4 X |
| $100 \mathrm{~A} / 3 \mathrm{P}$ | $100 \mathrm{~A} / 3 \mathrm{P}$ | 4 X |
| $200 \mathrm{~A} / 3 \mathrm{P}$ |  | 6 X |
| 400A three-pole <br> Main Switch <br> (Vertical Mounted) | 22 X |  |
| Total $=43 \mathrm{X}$ |  |  |

Box Dimensions-PRL4F

| "X" <br> Units | Catalog <br> Number | Height | Width | Depth ${ }^{(1)}$ |
| :--- | :--- | :--- | :--- | :--- |
| $38 X$ | BX3673 | $73.50(1866.9)$ | $36.00(914.4)$ | $11.31(287.0)$ |
| $50 X$ | BX3690 | $90.00(2286.0)$ | $36.00(914.4)$ | $11.31(287.0)$ |
| $38 X$ | BX4473 | $73.50(1866.9)$ | $44.00(1117.6)$ | $11.31(287.0)$ |
| $50 X$ | BX4490 | $90.00(2286.0)$ | $44.00(1117.6)$ | $11.31(287.0)$ |

## Top and Bottom Gutters

10.63 inches ( 269.9 mm ) minimum.

## Side Gutters-Minimum

- 36 -inch ( 914.4 mm ) wide box:
- 8 -inch ( 203.2 mm )—200A maximum
- 6 -inch ( 152.4 mm )-400-1200A maximum
- 44-inch ( 1117.6 mm ) wide box:
- 10-inch ( 254.0 mm )-200A maximum
- 8-inch (203.2 mm)—400-1200A

## Notes

(1) Box depth is 10.40 -inch $(264.2 \mathrm{~mm})$, cover adds 0.90 -inch $(22.8 \mathrm{~mm})$ to depth.

Flush trims not available on PRL4F panels.

Layout for Branch and Horizontally Mounted Main Device-PRL4F

A Fusible switch may be used as horizontally main.

- 400 and 600A horizontally mounted feeder switches in 36 -inch $(914.4 \mathrm{~mm}$ ) or 44 -inch ( 1117.6 mm ) wide box. 400 and 600 A horizontally mounted main switches only in 44-inch ( 1117.6 mm ) wide box. For vertically mounted main, see Page V2-T3-73 for sizing.
Note: See Page V2-T3-73 for MLO or Neutral and Vertically Mounted Main space requirements.

## Type PRL4D

## Product Description

- Drawout molded case circuit breaker power panelboard
- Front accessible
- Front connected
- Through-the-door design drawout mechanism
- Visual indication of breaker status and position
- Large grab handles for easy removal
- 600 Vac maximum
- 1200A maximum mains
- 600A maximum drawout molded case feeder breakers

## Application Description

- Interrupting ratings up to 200 kAIC symmetrical
- Feeder power panelboard
- Rated as Service Entrance Equipment when appropriately equipped
- Ideal for:
- Data centers
- Industrial facilities
- Process equipment manufacturing
- Anywhere that requires quick change of feeder devices is needed

## Benefits

- Ease of maintenance
- Faster to remove and install
- Less downtime

Standards and Certifications

- UL 67 Listed chassis
- UL 50 Listed box and trim

## Product Selection

Standard Main Lug, Through-Feed and Sub-Feed Lugs (1) (500 kcmil Maximum)

Main Breaker with Neutral (when required) (500 kcmil Maximum)

800A Vertically Mtd. MDL Main Breaker only in 24-inch ( 609.6 mm ) wide box Available with 38 X and 50 X Panel Height only.

Optional Main Lugs, Through-Feed and Sub-Feed Lugs (1) (750 kcmil Maximum)

Note
(1) Sub-feed lugs are available 250-600A. For 600A, use 1200A "A" space.

## Approximate Dimensions in Inches (mm)

## Panel Layout and Dimensions

To determine the dimensions of a given panelboard enclosure, make a layout sketch by fitting together the main, branch and lug modules according to the appropriate tables in the layout guide. Assign " $X$ " units to each module as shown and obtain a total " $X$ " number.
The height of the enclosure is related to the total " $X$ " units in the layout as shown in table on right. Three standard box heights are available to accommodate any and all layout arrangements. " $X$ " unit totals that do not exactly match those in table on right must be rounded off to the next higher standard (38X, 50X).

If a calculated " $X$ " total for a panel exceeds 50X, the panel must be split into two or more separate sections with " X " space for through-feed lugs figured in for all but one section. If a neutral is required, a separate neutral bar and appropriate " X " space must be included in each section.

## Layout Example

- One PRL4D panelboard, 480Y/277 Vac, threephase, four-wire, 65 kA , 800A main lugs only with:
- One JGS 200A/ three-pole
- One LGS 400A/ three-pole
- One JGS 150A/ three-pole dual mount
- One JGS 100A/ three-pole dual mount

## Reference PRL4D Layout Example

1. From layout guide, total " $X$ " height of panel $=33 X$.
2. From table on right, $33 X$ must use minimum 38X dimensions. Minimum box height is 73.50 inches ( 1866.9 mm ).
3. From the layout for branch and main devices, find minimum box width requirements for mains and branch/feeder devices.

- JGS single minimum width: 36 inches
- LGS single minimum width: 36 inches
- JGS dual minimum width: 44 inches
As the JGS duals require a minimum of a 44 -inch-wide box, the minimum box width is 44 inches.

4. From PRL4D Layout Example, the correct minimum box selection is $B \times 4473$, which is 73.50 inches $\mathrm{H} \times 44.00$ inches $W \times 11.31$ inches $D$ ( $1866.9 \mathrm{~mm} \mathrm{H} \times 1117.6$ $\mathrm{mm} W \times 287.0 \mathrm{~mm}$ D).

| Box Dimensions-PRL4D |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { "X" } \\ & \text { Units } \end{aligned}$ | Catalog Number | Height | Width | Depth ${ }^{(1)}$ |
| 38X | BX3673 | 73.50 (1866.9) | 36.00 (914.4) | 11.31 (287.0) |
| 50X | BX3690 | 90.00 (2286.0) | 36.00 (914.4) | 11.31 (287.0) |
| 38 X | BX4473 | 73.50 (1866.9) | 44.00 (1117.6) | 11.31 (287.0) |
| 50X | BX4490 | 90.00 (2286.0) | 44.00 (1117.6) | 11.31 (287.0) |

## Top and Bottom Gutters

10.63 inches ( 269.9 mm ) minimum.

## Side Gutters-Minimum

- 36 -inch ( 914.4 mm ) wide box: 6 -inch ( 152.4 mm )
- 44 -inch ( 1117.6 mm ) wide box: 8 -inch ( 203.2 mm )

Type PRL4D Layout Example

| JGS 200A three-pole single feeder |  | 7X |
| :---: | :---: | :---: |
| LGS 400A three-pole single feeder |  | 9X |
| JGS 150A <br> three-pole dual feeder | JGS 150A <br> three-pole dual feeder | 7X |
| Main Lugs | $\begin{aligned} & 800 \mathrm{~A} \\ & \hline \end{aligned}$ | 10X |

## Notes

(1) Box depth is 10.40 -inch ( 264.2 mm ), cover adds 0.90 -inch ( 22.8 mm ) to depth. Flush trims not available on PRL4D panels.
Door-to-door option not available on PRL4D panels.

Panelboards and Lighting Control

## Pow-R-Line C Panelboards

## Layout for Branch and Horizontally Mounted Main Devices-PRL4D

## Instructions

Determine box size by locating all main and feeder devices in your panel. The width of box is determined by the maximum box size shown for each device. For main lugs, through-feed lugs and sub-feed lugs, refer to Page V2-T3-80.

## 3

## Notes

(1) $100 \%$ rated breaker.
(2) Optional 750 kcmil terminal requires 44 -inch ( 1117.6 mm ) wide box.
(3) Contact Eaton for availability.

## Accessories and Modifications

## PRL4D Modifications

| Modification | Item Number |
| :--- | :--- |

| (2) $1 / 0-600 \mathrm{kcmil}$ |

## 7. Copper Main Busbars

Optional copper busbars are available in all ampere ratings.

## Modification 7

| Ampere <br> Range | Bare Copper Silver-Plated <br> Chassis Bus Copper Bus |
| :--- | :--- |
| 600 |  |
| 800 |  |
| 1000 |  |
| 1200 |  |

## 8. Density Rated Bus

Standard main bus ampere rating is determined by UL listed temperature rise testing. Density rated bus is defined at 750A per square inch for aluminum bus and 1000A per square inch for copper bus. Adder for aluminum density rated bus is in addition to the base price. Adder for copper density rated bus is in addition to the base price plus the appropriate adder for copper bus. See Modification 7.

Modification 8

| Ampere Rating |
| :--- |
| Aluminum-750A per Square Inch |
| 600 |

|  | Digitrip $310{ }^{(4)}$ | LSIG |

## 11. Ground Bars

Modification 11

| Description | Bar Type |
| :--- | :--- |
| Aluminum bar for aluminum | Standard, attached to box |
| and copper conductors | Insulated/isolated ground bar |
| Copper bar for use with | Standard, attached to box |
| copper only conductors | Insulated/isolated bar |

## Notes

(1) $L=$ Adjustable long delay pickup
$\mathrm{S}=$ Adjustable short delay pickup w/fixed short delay I = Adjustable instantaneous pickup
G = Adjustable ground fault pickup
A = Arcflash Reduction Maintenance System
(2) Trip unit includes Arcflash Reduction Maintenance System
(3) Digitrip 310+ is standard for the NGS, NGH and NGC.
(4) Digitrip 310 is standard for CND, CHND and CNDC.

## 12. Ground Fault Protection

Refer to Modification 10 for ground fault trip units.

## 13. Infrared (IR) Viewing Windows

Infrared viewing windows for main devices and drawout single-mounted feeder devices.

| Modification 13 |  |
| :--- | :--- |
| Overcurrent | IR Window <br> Device |
| Manufacturer |  |

14. Handle Lock-Off Devices for Breakers
Contact Eaton for a list of padlockable and nonpadlockable circuit breaker handle lock-offs.

## 15. Nameplates, Engraved

Field-attached nameplates.
Modification 15
Description
Mastic back, engraved, black with white lettering

Mastic back, engraved, colors other than black

Nameplates, screw attached

## 16. Permanent Circuit Numbers

Permanently attached micarta circuit numbering.

## 17. Seismically Qualified

For seismically qualified PRL4D panelboards, request seismic labeling on order.

## 18. Service Entrance Equipment

Service Entrance labeling as detailed under the "Service Entrance Equipment" per UL and NEC. Only panelboards meeting these requirements may be labeled as such. The requirement or service entrance labeling must be noted on the order. Includes neutral disconnect link and labeling "Suitable For Use as Service Equipment" (SUSE). Ground bar must be ordered separately. See Modification 11.

## 19. Shunt Trip for Main or Feeder Breakers

For tripping breaker from remote point. Voltage and frequency must be specified when ordering shunt trips. Wiring to terminal block is included with the drawout molded case product as standard. For all others wired to terminal block, contact Eaton.

## 20. Sub-Feed Lugs

Available only on main lug only panelboards.
Not available on service entrance panelboards with main lugs using the six disconnect rule.
Mechanical AI/Cu lugs. Compression or copper body lugs require additional price adder from Modification 4 or Modification 6, as appropriate.

Modification 20

| Panel <br> Ampere <br> Rating | Box Height <br> Addition |
| :--- | :--- |
| 600 | $4 X$ |
| 800 | $6 X$ |

## 21. Surge Protective Devices

 (SPD)Package includes SPD unit and integral circuit breaker disconnect (30A) connected to the chassis bus.

## Note

(1) Available on only single-mounted drawout. Not available on dual-mounted feeder devices.

## Product Overview

The PRL5P panelboard incorporates Eaton's plug-on power panelboard experience with modern manufacturing technology to provide the most flexible plug-on design in the industry.
Designed to eliminate the multitude of parts associated with other similar products, the PRL5P panelboard is the choice for applications where additions and changes must be fast and convenient.

## Plug-On Mains and

Branches provide the flexibility to move devices on factory-assembled panels after the boards are received at the job site. The electrician may move branch devices and place them into a configuration that fits the particular wiring needs of that installation.

Breakers are mounted to an adapter that includes the bus connection hardware. The breaker to bus bar connection is positive and secure. This proven connection has been utilized by Eaton in plug-on power panelboards since 1984.

## Two Enclosure Widths Provide Greater Flexibility

## 30-Inch ( $\mathbf{7 6 2 . 0} \mathbf{~ m m}$ ) Wide.

The narrowest enclosure in the industry for an 800A main, breaker or lug, and up to 600A branch breakerswhile providing ample wiring bending space. An industry exclusive is the ability to mount two 225A, 480 Vac breakers on the same adapter unit. It requires half the space necessitated by other products.

Type PRL5P—30-Inch ( 762.0 mm ) Wide

## 48-Inch ( 1219.2 mm) Wide.

Provides for mains up to 1200A. The 1200A lug adapter unit accepts up to 750 kcmil conductors. Two 600A breakers can be mounted across from one another. Another exclusive allows breakers of different sizes to be mounted across from one another, providing the ability to maximize space within the panel. There are no restrictions or predetermined spaces where branch devices must be placed.

Type PRL5P—48-Inch (1219.2 mm) Wide

## Circuit Breaker and Lug Adapter Units

Breaker adapter units utilize molded case circuit breakers that provide increased performance in considerably less space than standard breakers. They're available from 15-1200A at 600 Vac maximum. A wide range of integrally mounted breaker accessories are available.

Main and through-feed lug adapter units are available and are mounted similar to the breakers. Lug units are available up to 1200A.

Breaker and lug attachment units can withstand fault currents up to 200 kA rms symmetrical.

600A L-Frame Breaker

400A K-Frame Breaker

Dual-Mounted 225A F-Frame Breakers

1200A Main Lug Unit

An Oversized Area is Provided for Neutral Connections with Ample Lugs for Ease of Installation

## Type PRL5P

## Product Description

- 600 Vac maximum (250 Vdc)
- Three-phase four-wire, three-phase three-wire, single-phase three-wire
- 1200A maximum mains
- 1200A maximum branch devices
- Plug-on branch devices
- Factory assembled
- Refer to Pages V2-T3-7 and V2-T3-88 for additional information

## Application Description

- Power distribution panelboard
- Fully rated or series rated
- Interrupting ratings up to 200 kA symmetrical
- Suitable for use as Service Entrance Equipment, when specified on the order
- See Pages V2-T3-7 through V2-T3-23 for additional information

## Product Selection

## Panelboard Selection and Layout

Select either single-row or double-row bus chassis. Single-row bus chassismaximum 800 ampere main breaker or main lug only Select main device and " $X$ " space from table below. Select branch devices and corresponding " $X$ " space from the following tables.

Refer to layout data from the following tables. Make a
layout sketch of the main and branch devices utilizing either a single-row or double-row bus chassis indicating the " $X$ " space for each device. The maximum total " $X$ " space cannot exceed 40X for any panelboard. Should more than 40X be required, add the appropriate through-feed lug adapter or breaker to feed an additional panelboard.

Note: Any two breakers listed above may be mounted on the same 2 X or 3 X dual breaker adapter. Dual breaker adapters may be in single- or double-row chassis. Dual breaker adapters can NOT be mounted across from another in a double-row chassis.

## Modifications

## 1. Ambient Compensating Breakers

For ambient compensating breakers (where available) in lieu of standard breakers, add $10 \%$ to panelboard branch breaker and to main breaker list prices, if required.
(Not UL listed.)

## 2. Bus Density

Main bus ampere rating is determined by UL listed temperature test. 1000A per square inch copper is available and included in copper bus price addition.

## 3. Special Cabinet (Box) Construction

| Modification 3 |
| :--- |
| Modification |
| Type 3R Enclosure |
| Add per panel |

4. Complete Assembly

Complete assembly of panelboard box, interior and trim prior to shipment when required.

Panelboards and Lighting Control

## Elevator Control Panelboard

## Product Description

- 600 Vac maximum
- Three-phase four-wire
- 800A maximum mains
- 30-200A branch devices
- Short-circuit current rating up to 200 kA rms symmetrical
- Elevator controls including shunt trip, CPT, indicating lights and keyed selector switch

## Application Description

- Instrument protection
- Fully rated
- Interrupting ratings up to 200 kA symmetrical when protected by fuse
- Provides selective coordination to 0.01 seconds with the appropriate upstream overcurrent protective device
- Eaton's Elevator Control Panelboard provides significant space savings in the elevator control room when compared to traditional installations
- Factory assembled

Description

Elevator Control Panelboard
Product Selection.
Options V2-T3-97
Box Sizing and Selection

## Standards and Certifications

- UL 67 panelboards
- UL 50 enclosures
- UL 98 fusible switches

Elevator Control Panelboard is intended to meet the:

- NFPA 70 (National Electrical Code)
- NFPA 72 (National Fire Alarm Code)
- ANSI/ASME A17.1
(Safety Code for Elevators and Escalators)
- NFPA 13 (Installation of Sprinkler Systems)

## 1. Ambient Compensating Breakers

For ambient compensating breakers (where available) in lieu of standard breakers, add 10 percent to panelboard branch breaker and to main breaker list prices, if required. (Not UL listed.)

## 2. Bus Density

Main bus ampere rating is determined by UL listed temperature test. For 750A per square inch aluminum or 1000A per square inch copper, make price addition as follows:

Modification 2

| Panel Type | Maximum Amperes |
| :---: | :---: |
| Aluminum-750 A per Square Inch |  |
| PRL1a, 2a | 100 |
|  | 225 |
|  | 400 |
| PRL3a | 250 |
|  | 400 |
| PRL4 | 400 |
|  | 800 |
| Copper-1000 A per Square Inch |  |
| PRL1a, 2a | 100 |
|  | 225 |
|  | 400,600 |
| PRL3a | 250 |
|  | 600 |
| PRL4 | 400 |
|  | 1200 |

## 3. Special Cabinet (Box) Construction

Modification 3
Modification

## Type 1 Enclosure

28-inch ( 711.2 mm ) wide in place of standard 20-inch
$(508.0 \mathrm{~mm}$ ) wide PRL1a, PRL2a, PRL3a, PRL3E

## Type 2 Enclosure

(Drip-proof with gasketed trim) PRL1a, PRL2a, PRL3a, PRL3E 20-inch ( 508.0 mm ) wide

## Type 3R Enclosure

PRL1a, PRL2a 20-inch ( 508.0 mm ) wide
PRL1a, PRL2a 28-inch ( 711.2 mm ) wide
PRL3a © ${ }^{1}$, PRL3E 20 -inch ( 508 mm ) wide
(600A maximum)
PRL3a (1), PRL3E 28-inch (711.2 mm) wide
(600A maximum)
PRL4 24-inch ( 609.6 mm ) or 36-inch (914.4) wide only
Type 12 Enclosure
PRL1a, PRL2a 20-inch ( 508.0 mm ) wide
PRL1a, PRL2a 28-inch ( 711.2 mm ) wide
PRL3a (1), PRL3E 20-inch ( 508 mm ) wide
(600A maximum)
PRL3a (1), PRL3E 28-inch ( 711.2 mm ) wide
(600A maximum)
PRL4 24 -inch ( 609.6 mm ) or 36 -inch (914.4) wide only
Must also add bus density price from Modification 2 for PRL4
Type 4 Enclosure or Type 4X Stainless Steel Enclosure
Refer to Eaton

## 4. Complete Assembly

Complete assembly of panelboard box, interior and trim prior to shipment when required.

## 5. Compression Main Lugs-Al/Cu Burndy Range Taking

For other terminal types and box sizes, refer to Eaton.
Modification 5-Compression Lug Data

| Main Amperes | Wire Range by Pan PRL1a and PRL2a | el Type PRL3E | PRL3a | PRL4 |

| 250 | - | $2 X$ | $5 X$ |
| 400 | 0 | $0 X$ | $0 X$ |
| 600 | 0 | $0 X$ | $0 X$ |

Maximum size for PRL1a and PRL2a panels:
1-750 kcmil per phase, or 2-500 kcmil per phase.
For PRL4 panels, see layout pages.

## 6. Concealed Trim Clamps-LT Trim

## Modification 6

Description
Add per panel PRL1a, PRL2a, PRL3a, PRL3E

## 7. Conduit Covers

Fabricated sheet metal to cover open conduits above and/or below standard Type 1 box.

Modification 7
Cover Type
Conduit Enclosing Shield (open back)
PRL1a, PRL2a, PRL3a, PRL3E, PRL4—Refer to Eaton
Conduit Enclosure (solid back)
PRL1a, PRL2a, PRL3a, PRL3E, PRL4-Refer to Eaton

## Note

(1) At 600A, PRL3a requires the addition of density rated copper bus for Type 3R or 12 enclosure.

## 8. Copper Lugs

Optional copper mechanical main lugs only. (Includes main incoming neutral lug.)

Modification 8

| Main <br> Amperes | Wire Range and Number <br> of Lugs Per Phase |

## 9. Copper Main Bus

## Modification 9

Available in PRL1a, PRL2a, PRL3a, PRL3E, PRL4, PRL1aF, PRL2aF, PRL1R, PRL2R, PRL1a-LX and PRL2a-LX

## 9a. Silver-Plated Copper Main Bus

## Modification 9a

Available in PRL1a, PRL2a, PRL3a, PRL3E, PRL4, PRL1aF, PRL2aF, PRL1R, PRL2R, PRL1a-LX and PRL2a-LX

## 9b. Tin-Plated Copper Main Bus (PRL1a, 2a, 3a, Only)

Modification 9b
Panel Type
PRL1a, PRL2a, PRL3a, PRL3E

## 10. Directory Frame—Metal

Modification 10
Frame Type
Metal frame, plastic cover

## 11. Trim and Door Modifications-Special Fronts and Doors

Modification 11
Description
Door-in-door, one door over interior and one which exposes gutter. (LT Trim) (PRL1a, PRL2a, PRL3a, PRL3E only)
Common trim for two section panels with boxes bolted together. (LT Trim) (PRL1a, PRL2a, PRL3a, PRL3E only)

Standard flush lock with quarter turn fasteners at top and bottom of trim door (LT Trim) (standard on doors 48-inch (1219.2 mm) high and over). (PRL1a, PRL2a, PRL3a,
PRL3E only)
To provide a trim with a lockable door for PRL4 panels (door-in-door is standard with this adder). Includes National lock with standard keying. (1)
Add per panel

## 12. Fungus Proofing

For fungus proofing external portions of circuit breakers and all non-metallic parts, add 10 percent of total panelboard list price. For fungus proofing fusible switches and all non-metallic parts, add 20 percent of total panelboard list price.

## 13. Ground Bar

Modification 13

|  | Description | Bar Type |
| :---: | :---: | :---: |
| Panel Type |  |  |
| PRL1a <br> PRL2a <br> PRL3a <br> PRL3E <br> PRL4 | Aluminum terminal bar for aluminum or copper cable | Standard, insulated/isolated (2) |
|  | Copper terminal bar for copper cable only | Standard, insulated/isolated (2) |
| Column Type |  |  |
| In Pull Box In Gutter | Aluminum terminal bar for aluminum or copper cable | Standard, insulated/isolated (2) |
|  | Copper terminal bar for copper cable only | Standard, insulated/isolated (2) |

Notes
(1) Extra depth box is required. Box will be 12.82 -inch ( 325.6 mm ) deep.
(2) For PRL1a, 2a, 3a and Column Type panelboards. The insulated/isolated ground bar includes a standard ground bar.

Panelboards and Lighting Control
Types PRLla, 2a, 3a, 3E, 4 and Column Modifications

## 14. Electronic Trip Units

Modification 14-Applies to Digitrip 310 and 310+ Trip Units Description

3

| K-, L- and M-Frame Circuit Breaker (three-pole only) |
| :--- |
| Digitrip RMS310 LS |
| Digitrip RMS310 LSI |
| Digitrip RMS310 LSG (1) |
| Digitrip RMS310 LSIG (1) |
| N-Frame circuit breaker |
| Digitrip RMS310 LS |
| Digitrip RMS310 LSI |
| Digitrip RMS310 LSG (1) |
| Digitrip RMS310 LSIG (1) |
| Digiview Ammeter for 310+ Trip Unit |

## 15. Zero Sequence Ground Fault Protection

For main devices only (circuit breakers or FDPW switch) in PRL4 assembled panels. Available in 250-1200A panels.

Price includes current monitors, ground bar, static sensor, shunt trip, necessary space, mounting and connecting in panelboards. Price does not include circuit breaker or FDPW switch.
Zero sequence ground fault is available with the following family of main devices:

Modification 15
Main Device
JD, KD, LD, MDL, ND, LCL, LA-P, NB-P
FDPW switches
(400-1200A)

## 16. Circuit Breaker Handle Lockoff Devices

Modification 16
Breaker Types
Non-Padlockable

JD, KD, MDL, ND

## Padlockable

EHD, FDB, FD, HFD, FDC, ED, EDH, EDC, GHB, BAB, QBHW, HQP, QPHW, EGB, EGS, EGH JD, KD, LD, MDL, ND, FDE, HFDE

## 17. Special Hinges-LT Trim

Piano hinges in lieu of standard hinges.

## 18. Increased Dimensions (PRL1a, PRL2a, PRL3a and PRL3E Only) Type 1 Enclosure Only

| Modification 18 |  |
| :---: | :---: |
| Description |  |
| Increased End Gutters |  |
| 4 inch ( 101.6 mm ) Top or Bottom |  |
| 7 inch ( 177.8 mm ) Top or Bottom |  |
| 12 inch ( 304.8 mm ) Top or Bottom |  |
| Increased Side Gutters |  |
| 4 inch ( 101.6 mm ) Left or Right |  |
| 7 inch ( 177.8 mm ) Left or Right |  |
| 12 inch ( 304.8 mm ) Left or Right |  |
| 19. Increased Panel Main Bus Rating (Three-Phase Four-Wire, Single-Phase Three-Wire) |  |
| Modification 19 |  |
| Main Bus Ampere Rating | Panel Type |
| 100-225/250 | PRL1a, PRL2a, PRL3a, PRL3E |
| 225-400 |  |
| 600 (PRL3a) |  |
| 250-400 | PRL4 |
| 400-600 |  |
| 600-800 |  |
| 800-1200 |  |

## 20. Interior and Fronts to Fit Existing Boxes

Refer to Eaton.

## 21. Special Locks

Modification 21

| Description |
| :--- |
| LT Type Trim |
| Yale 511S with rosette |
| Master keying (LL803 Key) |
| Corbove locks or standard lock-per panelboard (Cat. \#60 Key) |
| PRL1a, PRL2a, PRL3a, PRL3E |
| Tee handle and 3-point catch |
| PRL1a, PRL2a, PRL3a, PRL3E |
| COMPX metal lock with standard keying |
| PRL1a, PRL2a, PRL3a, PRL3E |
| COMPX metal lock with GE75 keyway |
| PRL1a, PRL2a, PRL3a, PRL3E, PRL4 |
| EZ Type Trim |
| Standard Lock, Keyed GE75 |
| Standard Lock, Keyed to Corbin TEU-1 |
| Standard Lock, Keyed to Corbin Cat 60 |
| Standard Lock, Keyed to Corbin WEM1 |
| Notes |
| (1) Main breaker only. |
| PRL4 with door includes National lock with standard keying. See Modification 11. |

## 22. Molded Case Switches (Three-Pole, Two-Pole)

Modification 22
Not UL Listed

| Breaker Frame | Maximum Volts | Maximum Amperes |
| :--- | :--- | :--- |
| EHD | 480 | 100 |
| FD | 600 | 225 |
| JD | 600 | 250 |
| DK | 240 | 400 |
| KD | 600 | 400 |
| LD | 600 | 600 |
| MDL | 600 | 800 |
| ND | 600 | 1200 |

## 23. Nameplates, Engraved

Modification 23
Type
Mastic back and installed by purchaser, per nameplate
Fixed to panel trim with two screws or rivets, per nameplate
PRL1a, PRL2a, PRL3a, PRL3E only

## 24. Neutral Rated 200\%

Modification 24

| Main Bus Rating | Neutral Rating |
| :--- | :--- |
| 100 | 225 |
| 225 | 450 |
| 250 | 500 |
| 400 | 800 |
| 600 | 1200 |

## Modification 24-Box Height Additions

| Main Bus Rating | Neutral Rating | PRL1a, PRL2a | PRL3a, PRL3E | PRL4 |
| :--- | :--- | :--- | :--- | :--- |
| 100 | 225 | 0 | $0 X$ | - |
| 225 | 450 | 0 | - | - |
| 250 | 500 | - | $3 X$ | $0 X$ |
| 400 | 800 | 0 | $3 X$ | $0 X$ |
| 600 | 1200 | - | $3 X$ | $0 X$ |

Note: Dimensions based on mechanical lugs. For compression or copper lugs, refer to Eaton.

For 800 and 1200A PRL4 with $200 \%$ neutral, refer to Eaton.

## 25. Painting and Special Coatings

Standard boxes are code-gauge galvanized sheet steel. Standard trims are code-gauge sheet steel with a rust inhibiting phosphatized coating and finished with ANSI-61.

Modification 25
Description
Painted boxes (ANSI-61)
Painted trims or boxes (other than ANSI-61)

## 26. Permanent Circuit Numbers

Modification 26
Description
To provide permanently attached Micarta Xcircuit numbers.

## 27. Remote Control Switches-ASCO 920 (Three-Pole, Two-Pole)

Electrically operated, mechanically held remote control switch directly mounted to panelboard bus for total or split bus switching applications.
(For split bus applications, make price addition from Modification 30.)

480 Vac maximum short-circuit rating of panelboard is 22 kAIC maximum.

Includes complete installation in the panelboard with a screw cover over the switch compartment.

Pushbuttons or other control devices are not included.
For control circuit modifications, refer to Eaton.
Modification 27-Remote Control Switches (PRL3a and PRL3E Only)

Switch Rating Amperes
$30,60,75,100,150,200,225$
Modification 27-Remote Control Switch Modifications Description
Two-wire control relay
Three-wire control relay
Control power transformer
To provide hinged cover in place of standard screw cover

## 28. Service Entrance

To provide a Service Entrance Label as detailed under the "Service Entrance Equipment" in application considerations. Only panelboards meeting these requirements can be labeled as such. The requirement for a Service Entrance Label must be noted on order entry. Includes neutral disconnect link and Service Entrance Equipment Label. (Ground bar not includedsee Modification 13.)

## Modification 28

Panel Type
PRL1a, PRL2a, PRL3a, PRL3E, PRL4

Types PRLla, 2a, 3a, 3E, 4 and Column Modifications

## 29. Shunt Trip for Main or Branch Circuit Breaker and FDPW Switches

For tripping device from a remote point. Voltage and frequency must be specified. Wiring to terminal blocks is not included. Standard leads extend 18 -inches ( 457.2 mm ) out of device.

Factory-installed 120, 240 or 480 Vac shunt trips are available with UL listing as shown in table below. Underwriters Laboratories listing is not available for shunt trip mounted on molded case switches.

## Modification 29

## Device

## BAB, QBHW

Requires one additional pole space, i.e., single-pole is two-pole size, two-pole is three-pole size and three-pole is four-pole size.
GHB (three-pole only)
All other circuit breakers
FDPW switch (400-1200A)

## 30. Split Bus or Meter Loop (250A Max.,

## 3Ph 4W, 3Ph 3W, 1Ph 3W, 1Ph 2W)

Panel type PRL3a only. For enclosure size, refer to Eaton.
Modification 30
Main Bus Amperes
100-250

## 31. Metering Devices (PRL4 Only)

IQ digital metering for incoming service. Devices are installed in chassis mounted compartment with hinged door. Standard CTs (1200A maximum) are included with devices. Requires copper bus at 1200A.

## Modification 31

| Device | Box Height Addition |
| :---: | :---: |
| 10130 with CTs and display | 13X |
| IO 130 with CTs, no display | 13X |
| 10140 with CTs and display | 13X |
| IO 140 with CTs, no display | 13X |
| 10150 with CTs and display | 13X |
| IO 150 with CTs, no display | 13X |
| 10210 with CTs | 13X |
| 10220 with CTs | 13X |
| 10230 with CTs | 13X |
| 10230 M with CTs | 13X |
| 10250 with CTs and display | 13X |
| IO 250 with CTs, no display | 13X |
| 10260 with CTs and display | 13X |
| 10260 with CTs, no display | 13 X |
| PXM 2250 with CTs and display | 13X |
| PXM 2250 with CTs, no display | 13X |
| PXM 2260 with CTs and display | 13X |
| PXM 2260 with CTs, no display | 13X |
| PXM 2270 with CTs and display | 13X |
| PXM 2270 with CTs, no display | 13X |

## 32. Sub-Metering IQ Multi-Point Submeter II (PRL4 OnIy)

Microprocessor-based breaker-mounted device to monitor power and energy (kW, kWH, kW demand). Device mounts on the load side of three-pole F-, J- and K-Frame feeder breakers. Units are shipped with the interior for field installation. Minimum box width of 36 inches ( 914.4 mm ) is required.

Modification 32
IO Energy Sentinel
F-Frame three-pole (150A maximum)
J-Frame three-pole
K-Frame three-pole

## 33. Sub-Feed Breakers

Modification 33-Panel Types PRL1a, PRL2a, PRL3a, PRL3E. One Breaker Per Panel

| Maximum <br> Amperes | Number of Poles | Breaker Type | Interrupting Rating (kA Symmetrical) |  | Box Height Addition PRL3a |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 240V | 480V |  |

| 250 | 3 | HJD | 100 | 65 | $20 X$ |
| 250 | 3 | JDC | 200 | 100 | $20 X$ |

## 34. Sub-Feed Lugs (3Ph 4W, 3Ph 3W, 1Ph 3W, 1Ph 2W)

Note: Not available on service entrance panels with main lugs only (six disconnect rule).

Mechanical AI/Cu lugs. Compression or copper lugs requires additional price adder from Modification 5-Compression Lug Data or Modification 8 as appropriate.

Available on main lug panels only.
Modification 34

| Main Amperes | Box Height <br> Addition |
| :--- | :--- |
| Panel Types PRL1a, PRL2a |  |
| $100-225$ | $0 X$ |
| Panel Type PRL3a, PRL3E |  |
| $100-250$ | $1 X$ |
| Panel Type PRL4 ${ }^{1}$ |  |
| $250-400$ | $0 X$ |
| 600 | $4 X$ |

## 35. Tamperproof Screws-LT Trim

Modification 35
Description
Tamperproof screws for trims, in lieu of standard screws.

## 36. Through-Feed Lugs (3Ph 4W, 3Ph 3W, 1Ph 3W, 1Ph 2W)

Note: 225 amperes maximum on Column Type panels. Not available on service entrance panels with main lugs only (six disconnect rule).

Mechanical Al/Cu lugs. Compression or copper lugs requires additional price adder from Modification 5-Compression Lug Data or Modification 8 as appropriate.

Not available on panels with sub-feed breaker.
Modification 36

| Main Amperes | Box Height Addition |

## 37. Time Clock Space Only

Includes box, trim, door and mounting pan.
Modification 37
Enclosure Type

| Type 1 |
| :--- |
| PRL1a, PRL2a, PRL3a, PRL3E (24-inch ( 609.6 mm ) space) |
| PRL1a, PRL2a, PRL3a, PRL3E (36-inch (914.4mm) space) |
| Type 3R |
| PRL1a, PRL2a, PRL3a, PRL3E (24-inch ( 609.6 mm ) space) |
| 38. Touchup Paint |
| Modification 38 |

## Description

12 oz. spray can. ANSI-61 light gray indoor
Case Lot of 12—12 oz. spray cans. ANSI-61 light gray indoor single style

## Notes

(1) Refer to PRL4 layout.
(2) Refer to panelboard sizing charts.

## 39. Surge Protective Device (SPD)

## Type PRL1a, PRL2a, PRL 3a and PRL3E Panelboards

Package includes SPD unit connected to the panelboard bus.
Available for all enclosure types.
Sizing:
PRL1a, PRL2a, PRL3E: Add 7 inches ( 177.8 mm ) to the standard box height.
PRL3a: Add 4X for 100-200 kA SPD units.
PRL3E: AdVisor/SuperVisor display (200 kA maximum) add 8 inches. SML TVSS add 7 inches.

## Type PRL4 and Elevator Control Panelboards

Package includes SPD unit and integral circuit breaker disconnect (30A) connected to the panel bus.
Available for all enclosure types.
The SPD unit and integral circuit breaker disconnect will require $7 X$ of chassis space. (Only available in 36 -inches ( 914.4 mm ) or $44-\mathrm{inches}$ ( 1117.6 mm ) wide enclosure.)

Modification 39

| Product Selection . . . . . . . . . . . . . . . . . . . . . . | V2-T3-121 |

## Product Overview

Pow-R-Command ${ }^{\text {TM }}$ is a lighting control and energy management system that integrates branch circuit protection, control (switching and dimming) and metering into a single panelboard enclosure. The integrated design simplifies electrical distribution and control systems design, and eliminates separate equipment enclosures and associated wiring. Other benefits include reducing equipment wall space, installation labor and total installed cost. Pow-RCommand systems are designed to meet or exceed ASHRAE, IECC and LEED® requirements.
Pow-R-Command Intelligent Panelboards use Eaton Pow-RLine ${ }^{\circledR} 1$ a and 2 a lighting panelboard platforms to mount Pow-R-Command electronics and solenoid-operated controllable circuit breakers. Panelboard mains include 100 A to 400 A main lug and main circuit breaker configurations. Available voltages include 120/240, 208Y/120 and 480Y/277, single-phase and three-phase. Panelboard options include installation of controllable and non-controllable circuit breakers, 200\% rated neutral, metering and surge protection devices (SPDs).
Pow-R-Command Intelligent
Panelboards are assembled in two basic configurations, Pow-R-Command Master and Expansion Panelboard.
Pow-R-Command Master
Panelboards are designed for
standalone and networked systems. Master Panelboard components include controller with low voltage power supply, Breaker Control Bus (BCB) and solenoid-operated controllable circuit breakers.
Expansion Panelboards (PRCEP) are designed to directly connect to Master Panelboard via controller SLAN communications. Expansion Panelboard includes BCB and solenoid-operated controllable circuit breakers. Pow-R-
Command systems are scalable using both Master and Expansion Panelboards to provide the right amount of control with reduced installed cost.

## System Electronics

The 5th generation PRC "E" Series controller family includes PRC2000E,
PRC1500E, PRC1000E and PRC750E models. Specifiers and users select the controller to meet specific control and communication requirements. PRC-E controllers offer a broad range of schedule and occupant-based control. Network options include RS-485 and Ethernet. PRC-E controllers communicate with each other using powerful Pow-R-Command peer-to-peer protocol. All PRC-E controllers can be programmed, monitored and overridden using the onboard Web pages through the controller maintenance Ethernet port using an industry standard patch cable. The PRC2000E model includes access to onboard Web pages through
the Ethernet network connector. Both PRC1500E and PRC2000E models include BACnet/IP for simple and straightforward integration with building management systems. All Pow-R-Command controllers can control up to 168 solenoid-operated controllable circuit breakers by connecting PRCEP panelboards using the controller SLAN sub-network communications port.
Breaker Control Bus electronics come in 9-, 18- and 21-circuit lengths depending on the size of the panelboard and are directly mounted to panelboard interior rails. BCBs are connected to the controller SLAN via 4-conductor cable and act as the interface between controller and controllable circuit breaker for providing status and control. Onboard power switching circuitry signals the controllable circuit breaker solenoid to switch the controllable circuit breaker ON and OFF. Each BCB is addressable between 1 and 8, allowing the controller to monitor and control up to 168 controllable circuit breakers. Pow-R-Command panelboards are assembled with one or two BCBs to offer the right amount of control.

## Controllable Circuit Breakers

Controllable circuit breakers include standard circuit protection and control. Solenoid mechanism provides control, mechanical and electronic status and override lever.

Controllable circuit breakers are available in 15-30 A, single-pole and two-pole configurations and are suitable for electrical distribution systems up to 480Y/277 Vac Special application controllable circuit breakers include emergency and plug load. Emergency controllable circuit breakers are used for controlling dual purpose emergency lighting fixtures Plug load controllable circuit breakers are used to meet new energy codes requiring $50 \%$ of receptacles to switched ON and OFF using schedule- or occupancy-based control systems. The two-pole device includes a standard non-controlled and controllable circuit breaker pole for connecting to split receptacles. The common handle tie disconnect and common trip mechanism allows for shared neutrals and meets NEC requirements.

## Accessories

Pow-R-Command system accessories include digital switches (PRCDS) and low voltage switches (PRCLS) to provide local occupant override and light level scene control. Switches are available in 2-, 4and 6-button configurations in white, black and almond colors.

## Software

Programming, monitoring and control software includes Lighting Optimization Software (LOS), Building Graphics Software (BGS) custom graphics and Site Server (WSS).

Pow-R-Command

## Features

Pow-R-Command Master Panelboard Mounted Components

Pow-R-Command Expansion Panelboard
Expansion Panelboard (PRCEP) includes Breaker Control Bus electronics and solenoid-operated controllable circuit breakers. Master and Expansion Panelboards are connected via SLAN communications sub-network to provide a scalable system architecture for cost-effective control solutions.

## Pow-R-Command Controllers

Pow-R-Command Intelligent Panelboards integrate branch circuit protection and control into a single panelboard enclosure to eliminate the need for mounting external time clocks with contactors or relay panels. Four 5th generation PRC-E series controller models are available to allow users and specifiers to select the controller that best fits the application.

## PRC750E

- Microprocessor-based programmable lighting and energy management system intended for standalone applications
- Designed with the electrical contractor in mind, it offers integral back-lit color LCD touchscreen display for simple, straightforward commissioning and startup
- Front panelboard programming can also be achieved by connecting the controller maintenance port to a laptop using an industry standard Ethernet patch cable
- Preconfigured Web pages or PC software can be used to program, monitor and override the system
- Control options include schedule-based, occupant override and photocell control
- Sixteen two-wire low voltage inputs are available for connecting wall stations, occupancy sensors and photocells
- Each controller can be connected to three Expansion Panelboards via SLAN communications to control and monitor up to 168 solenoid-operated circuit breakers

## PRC1000E

Includes all the features of the PRC750E controller with the addition of:

- Up to 120 controllers can be connected to the same Pow-R-Command RS-485 peer-to-peer network
- Powerful peer-to-peer protocol and network architecture allows schedules and external wiring device signals to be broadcast over the network to control any or all of the solenoid-operated controllable circuit breakers connected to the system. This system capability eliminates the need for changing the same schedule in multiple panelboards and requiring additional wiring devices to be directly connected to specific controllers
- Eight universal inputs can be programmed to accept either digital or analog external wiring devices. Compatible with Iow voltage digital wiring devices like wall stations, occupancy sensors and photocells when programmed as digital inputs. When programmed as $0-10 \mathrm{Vdc}$ analog inputs, indoor and outdoor photosensors can be connected for dimming and daylight harvesting applications
- Eight analog 0-10 Vdc outputs for connecting to fluorescent and LED lighting fixtures equipped with $0-10 \mathrm{Vdc}$ dimming circuitry to meet dimming and daylight harvesting application requirements
- Compatible with existing PRC1000 systems

## PRC1500E

Includes all the features of the PRC1000E controller with the addition of:

- Ethernet communications
- BACnet/IP communications protocol for integrating into building management systems

## PRC2000E

Includes all the features of the PRC1500E controller with the addition of:

- Remote access to preconfigured Web pages for programming, system monitoring and override control via Ethernet network connection
- Compatible with existing PRC2000 systems

## Pow-R-Command

## Note

(1) Requires software.

## Product Selection

PRC-E Controller connecting occupancy
Pow-R-Command "E" Series controllers are available in four models and offer a range of features to meet a broad range of applications and meet energy codes. Each
PRC-E controller includes a backlit color LCD touchscreen, SLAN expansion network, schedulebased controls and two-wire low voltage inputs for
sensors, wallstations and other building control signals.
The PRC-E Controller
Selection Guide may be used to quickly identify the controller that best fits the application. The PRC-E Controller Features table on the previous page provides greater detail for the specifier that may be interested in specific controller details.

PRC-E Controller Selection Guide (1)

| Description | Catalog <br> Number |
| :--- | :--- |
| Standalone operation, schedule-based control, occupant override control and <br> Master/Expansion SLAN | PRC750E |
| RS-485 network, digital switch network, dimming and daylight <br> harvesting control | PRC1000E |
| PRC1000E features plus Ethernet network and BACnet/IP protocol | PRC1500E |
| PRC1500E features plus remote accessible preconfigured Web pages | PRC2000E |

Note
(1) PRC-E controllers are compatible and recommended for existing Pow-R-Command systems with the same preceding model number, i.e., PRC1000 is compatible with PRC1000E.

## Externally Mounted Controllers

## Externally mounted

 controllers (PRCEEC) are available for retrofit and renovation projects when existing panelboards do not have required controller mounting space. Externally mounted controllers include controller and control power transformer mounted in a NEMA 1 enclosure. Eaton Pow-R-Line 1a and 2a lighting panelboards can beconverted to Pow-R-
Command Expansion Panelboards (PRCEP) in the field by mounting Breaker Control Bus (BCB) and controllable circuit breakers directly to the interior. Externally mounted controllers are connected to the retrofitted PRCEP panelboard using the SLAN communications network.

PRCE Externally Mounted Controllers

| Controller Type | Connected System Voltage | Catalog Number |
| :--- | :--- | :--- |
| PRC750E with display | 120 Vac | PRC750EECD-120 |
| PRC750E with display | 277 Vac | PRC750EECD-277 |

| PRC1500E with display | 120 Vac | PRC1500EECD-120 |
| PRC1500E with display | 277 Vac | PRC1500EECD-277 |
| PRCCO00E w with display | 120 Vac | PRCCO00EECD-120 |
| PRC2000E with display | 277 Vac | PRC2000EECD-277 |

## PRC-E Controller Backlit Color LCD Touchscreen

PRC-E controller backlit color LCD touchscreen display (PRCELCD) provides the user with a means for front panel programming, status monitoring and override control. PRCELCD is compatible with PRC-E controllers and can be factory or field installed. Users can safely access the controller low voltage compartment by loosening two captive screws located on the top corners of the display and folding the display down.

PRCELCD features include:

- Mounting plate and hardware
- High image quality a-Si TFT LCD module
- Resistive type touch panel
- 4.3-inch diagonal display with 16:9 aspect
- 16.7 M colors
- High contrast, high brightness
- Captive screws and hinge for easy access to controller low voltage compartment

PRC-E Controller LCD Touchscreen
Description Catalog Number
PRCE backlit LCD touchscreen with mounting plate PRCELCD

## Breaker Control Bus

Breaker Control Bus (BCB) provides the electronic interface and power switching signal between the controller and solenoidoperated controllable circuit breaker. BCB comes in three lengths to fit standard lighting panelboards and is mounted to the panelboard interior rails. Each BCB has a set
of DIP switches to configure the device SLAN address between 1 and 8 . BCBs are connected to the PRC-E controller using PRC-to-BCB and BCB-to-BCB SLAN cables in a daisy-chain network architecture. RUN, SLAN and PWR LEDs indicate $B C B$ operating status.

## Controller and Breaker Control Bus SLAN Cables

Controller and BCB SLAN cables are used for connecting controllers to associated BCBs. Each cable type is made in three lengths using Alpha 1064 4-conductor
\#16 AWG wire. One pair of wires used for 30 Vac power with the second pair used to transmit and receive communications with connected controller.

| Controller and Breaker <br> Control Bus SLAN <br> Cables | Controller and Breaker Control Bus SLAN Cables |  |

|  | Controller-to-BCB / 42-circuit with right BCB only | PRCSLAN42R |
|  | Controller-to-BCB / 30-circuit with right BCB only | PRCSLAN30R |
|  | Controller-to-BCB / 18-circuit with right BCB only | PRCSLAN18R |
|  | BCB-to-BCB / 42-circuit | PRCSLAN42B |
|  | BCB-to-BCB / 30-circuit | PRCSLAN30B |
|  | BCB-to-BCB / 18-circuit | PRCSLAN18B |

## Auxiliary Power Supply

Auxiliary Power Supply (PRCPS) is used to boost power on the SLAN. Master and Expansion Panelboards communicate over the SLAN via Alpha 1064 4-conductor \#16 AWG cable. Recommended maximum SLAN length is 150 ft . One pair of wires provides power to BCB for switching controllable circuit breakers
with the second pair used for controller to BCB RS-485 communications. The PRCPS can be used to power a single Expansion Panelboard or extend the SLAN an additional 150 ft . The SLAN can be extended up to 4,000 ft by using a PRCPS in each PRCEP.

Auxiliary Power Supply

## Emergency Circuit Breaker

The GHORDEL and GHORSPEL controllable circuit breakers are designed to meet NEC 700.12(F) for sources of power in unit equipment used for emergency lighting applications. The controllable circuit breaker includes both
switched circuit for controlling lighting and standard non-switched circuit to provide power to the unit emergency charging and detection circuitry. Controllable circuit breaker includes a common handle tie and a common trip mechanism.

(2) Compatible with PRC750E, PRC1000E, PRC1500E and PRC2000E systems. Not recommended for existing PRC100, PRC750, PRC1000 and PRC2000 systems. GHORSPEL controllable circuit breakers are compatible with these systems.
(3) Compatible with PRC750(E), PRC1000(E), PRC1500(E) and PRC2000(E) systems. Not recommended for existing PRC100, PRC750, PRC1000 and PRC2000 systems. GHQRSP controllable circuit breakers are compatible with these systems.

## Pow-R-Command Switches

## Digital Switches

Pow-R-Command Digital Switches (PRCDS) are used for occupant override and light level control. PRCDS include digital and analog I/O and 12 Vdc external power source for connecting field wiring devices. The 12 Vdc external power source is used to power an occupancy sensor and digital input for monitoring occupancy status. Analog input is used to connect a light level sensor analog output for controlling up to 30 fluorescent ballasts or LED drivers. Digital switches are connected to controllers' Digital Switch Network (DSN) via CAT6 cable with 23 AWG wire using standard RJ45 connectors. Each controller DSN supports connecting up to 99 digital switches. Onboard rotary switches allow addresses to be set in the field. LED backlit buttons provide real-time breakers and/or groups status. Each digital switch can have a title description using up to 16 characters. Pushbutton labels can have up to four characters. Standard font type is Helvetica regular bold.

## Pow-R-Command Switch Override Controller

The Pow-R-Command Switch Override Controller (PRCSOC) can be used to connect digital and analog I/O to Pow-RCommand systems. This device is recommended when controller onboard digital and analog I/O has been exceeded or when there is an advantage to connecting remote I/O via a network connection. The PRCSOC is supplied with the controller, termination board in a NEMA 1 enclosure. Dual voltage 120/277 Vac power supply and 32 -status LED output card are optional.

The PRCSOC is connected to the Pow-R-Command system via the RS-485 network. Status and command signals are sent to the system using Pow-RCommand peer-to-peer protocol. The PRCSOC is configured using Pow-RCommand Lighting Optimization Software.

All digital and analog I/O is connected using \#18 AWG with maximum of 500 ft length. The PRCSOC features include:

- Sixty low voltage two-wire switch inputs for connecting wall stations, occupancy sensors and control relay outputs from building management systems
- Eight low voltage two-wire universal (digital or analog) inputs. Analog field devices like light level sensors with $0-5$ Vdc outputs can be connected for dimming and daylight harvesting applications
- Three low voltage 0-10 Vdc analog outputs for controlling fluorescent and LED light fixtures equipped dimming circuitry; maximum of 40 each per output with optional dimmer cables
- Sixteen low voltage twowire 24 Vdc outputs to power status LEDs; optional to add 32 low voltage two-wire 24 Vdc outputs to power status LEDs
- External 15 Vdc power source for powering occupancy and light level sensors and PRC auxiliary devices
- Connects to Pow-RCommand RS-485 network
- Communicates to the system using Pow-RCommand peer-to-peer protocol
- Configured by using Pow-R-Command Lighting Optimization Software
- Provided in a NEMA 1 enclosure
- Not compatible with PRC750(E) controllers

## Accessories

## Ethernet Interface Module

Pow-R-Command Ethernet Interface Module (PRCEIM) allows access to the PRC controller RS-485 network when using a PC connected directly to the EIM Ethernet port or connected on a facility's Ethernet network.

PRCEIM can be used as the master scheduler and includes 250 unique schedules. The PRCEIM can be programmed to sync controller time clocks. This device is connected to the Ethernet network using standard CAT5 cable. The three-pin connector is used to directly connect to the Pow-R-Command RS-485 controller network.

The PRCEIM comes in a table top enclosure and should be physically located near an Ethernet hub or repeater, but the PC can be located anywhere on the Ethernet network. The PRCEIM will communicate at 10Base-T and must have a fixed IP address assignment on the Ethernet network.

| Ethernet Interface Module | Ethernet Interface Module (1) <br> Description | Catalog Number |
| :---: | :---: | :---: |
|  | PRC Ethernet Interface Module mounted in table top enclosure | PRCEIM |

## Note

(1) Not compatible with PRC750(E) controllers. Recommended for PRC100 and PRC1000(E) controllers.

## BACnet Interface Module

Pow-R-Command BACnet Interface Module (PRCBIM-1) is designed for simple BACnet integration without the need for extensive BACnet knowledge. The device maps Pow-RCommand controller points to BACnet/IP points of any RS-485 network connected Pow-R-Command controller. The PRCBIM-1 can map up to

50 points. These points include status and control of individual controllable circuit breakers and groups of controllable circuit breakers. Input status is also included in the points map.
Programming the device is accomplished by using Pow-
R-Command Lighting Optimization Software (PRCLOS). The PRCBIM-1
includes two network connections. The RS-485 connection is used for connecting the Pow-RCommand RS-485 network while the Ethernet 10Base-T connection is used for connecting to the facility Ethernet network. The device requires a fixed IP address to be configured before connecting to the network.

| Description | Catalog Number |
| :--- | :--- |
| PRC BACnet Interface Module | PRCBIM-1 |

## BACnet Shadow Server

Pow-R-Command BACnet Shadow Server (PRCSS) is designed for simple BACnet integration without the need for extensive BACnet knowledge. The PRCSS maps Pow-R-Command controller points to BACnet/IP points. Up to 120 devices can be connected to a system. Each PRCSS has full access to all 150 points of the directly connected Pow-R-Command controller. These points include status and control of individual controllable circuit
breakers and groups of controllable circuit breakers. Input status is also included in the points map. Programming the device is accomplished by using Pow-R-Command Lighting Optimization Software (PRCLOS). The PRCSS includes two network connections. The RS-485 connection is used for connecting the Pow-RCommand RS-485 network while the Ethernet 10Base-T connection is used for
connecting to the facility Ethernet network.
The PRCBIM-1 includes two network connections. The RS-485 connection is used for connecting the RS-485 network while the Ethernet 10Base-T connection is used for connecting to the facility Ethernet network. The device requires a fixed IP address to be configured before connecting to the network. Device power is supplied by controller 12 Vdc external power source.

Description
PRC BACnet Shadow Server
Catalog Number
PRCSS

Note
(1) Not compatible with PRC750(E) controllers. Recommended for PRC100 controllers. Consult factory for PRC1000(E) controllers.

## Universal Ethernet Interface

The Pow-R-Command
Universal Ethernet Interface (PRCUEI) is used in conjunction with the PRC5000 Advanced Lighting Controller to connect multiple RS-485 networks using the facility's Ethernet network via

TCP protocol. The PRC5000 can connect up to 16 Pow-RCommand RS-485 networks using a PRCUEI to connect each network. The PRCUEI supports up to 120 Pow-RCommand devices on each RS-485 network.

The device power is supplied by the controller 12 Vdc external power connection.

PC Central Software (PRCPCC01) is required for configuration and programming.

Universal Ethernet Interface ©
Description Catalog Number
PRC Universal Ethernet Interface PRCUEI

## Universal Ethernet Router

Universal Ethernet Router PRCUER is intended for facilities where an Ethernet network is already installed.

The PRCUER extends the Pow-R-Command controller network by tunneling Pow-RCommand controller LAN control packets over existing Ethernet network using UDP Ethernet protocol. PRCUER devices extend the controller

LAN transparently across Ethernet segments within the same subnet, allowing segments of the controller network to be physically separated from each other within a facility. Programming the device is accomplished by using Pow-R-Command Lighting Optimization Software (PRCLOS). The PRCUER includes two network connections.

The RS-485 connection is used for connecting the Pow-R-Command RS-485 network while the Ethernet 10Base-T connection is used for connecting to the facility Ethernet network. The device can be configured for DHCP or be assigned a static IP address. Device power is supplied by controller 12 Vdc external power source.

(1) Not compatible with PRC750(E) controllers. Recommended for PRC100 and PRC1000(E) controllers RS-485 networks.

Panelboards and Lighting Control

## Pow-R-Command

## PRC5000 Building Automation Controller

Pow-R-Command 5000
(PRC5000) is a microprocessor-based lighting control and energy management controller. It is capable of communicating with other Pow-R-Command system devices for providing advanced control strategies including master schedules and demand response.

Custom equipment performance and energy usage reports can be configured and automatically sent to the facility manager via email notification. These reports may be used to measure and verify that equipment is performing as designed and delivering expected energy savings.

The PRC5000 controller is commonly used to serve facility custom graphics via Web pages. Authorized users can log into the device using a standard Web browser for viewing the custom graphics. System schedule changes and override controls can be made at the click of a button.

## Lighting Optimization

## Software

Lighting Optimization Software (PRCLOS) is recommended for Pow-RCommand system users. It is compatible with PRC100, PRC750(E) ©, PRC1000(E), PC1500(E) and PRC2000(E) systems. PRCLOS controllers only through the front Maintenance port using a PRCSmartCable. allows users to set up, program and monitor their system. This basic software package is capable of recognizing and saving databases for a single site.

## Building Graphics Software

Building Graphics Software (PRCBGS) is a fully interactive object oriented graphics interface for controlling and monitoring Pow-R-Command lighting control and energy management systems. The integrator can create and depict objects such as light fixtures, switches, occupancy sensors, light sensors, floor plans, etc. PRCBGS provides server graphic Web pages over local Ethernet connection to any computer using a standard Internet browser. PRCBGS requires the installation of PC Central (PRCPCC01/
PRCPCC10).

| :--- | :--- |
| PRC Building Graphics Software | PRCBGS |

Note
(1) Remote network connection not available. Requires direct connection to controller Maintenance port. PRC750 connection requires PRCSmartCable. PRC750E connection requires industry standard patch cable.

## PC Central Software

PC Central Software (PRCPCC) is recommended for field technicians responsible for maintaining Pow-R-Command systems. It is compatible with PRC100, PRC750 (E) ©, PRC1000(E), PC1500(E) and PRC2000(E) systems. PRCPCC allows
users to set up, program and monitor their system with the added features of advanced diagnostics and programming capabilities. This advanced software package is capable of recognizing and saving databases for single or multiple sites.

## Site Server Software

Pow-R-Command Site Server (PRCSSS) integrates the PC Central suite of management tools with the Internet or Intranet. The users have realtime global access to the Pow-R-Command systems through the Internet. PRCSSS allows multiple users access to historical data, device status and control, and graphical display interfaces.

Any computer on the network with PRCSSS can access realtime dynamically refreshed data using a browser implementing appropriate Web standards (Netscape Navigator or Internet Explorer). Special software other than the browser is not required. PC Central is required to run this application software.

## Desktop Computer

## Recommended Minimum Computer Specifications

Although it is difficult to guarantee compatibility with all PC-compatible equipment, the basic installation is generally compatible with the following minimum specifications:

- Microsoft® Windows ${ }^{\circledR}$ operating system
- 1 GHz processor or better
- At least 40 MB of unused RAM
- Hard drive with at least 100 MB of free space plus 50 MB for each site to be managed
- Ethernet network adapter
- $800 \times 600$ monitor
- CD-ROM drive

## Smart Cable Programming Tool

Pow-R-Command Smart Cable (PRCSmartCable) is used for front panelboard programming PRC100, PRC750, PRC1000 and

Lighting Optimization Software and PC Central Software is compatible with the following operating systems:

- Windows 98 Second Edition
- Windows 2000 Professional
- Windows 2000 Server
- Windows 2003 Server
- Windows XP Home Edition
- Windows XP Professional Edition
- Windows Vista (all versions)
- Windows 7
- Windows 10

PRC2000 controllers. The PRCSmartCable connects the local laptop USB port to controller maintenance port.

## Product Description

- 600 Vac maximum
- Three-phase four-wire, three-phase three-wire, single-phase three-wire.
- Service entrance panel combining a main disconnect with a power company metering compartment
- Circuit breaker or fusible switch disconnect
- 400-1200A ratings
- Provision for power company metering:
- Hinged sealable door over CT section
- Arranged for bar-type, 200-1200A utilityfurnished CTs
- Barriered CT compartment
- Factory assembled
- Wallmounted enclosure

## Application Description

- For use in areas where the disconnect and current transformer combination is required by utilities
- Suitable for use as Service Entrance Equipment
- Top or bottom entrance
- Hot or cold sequence metering
- The current transformer compartment will accommodate the following 12-inch ( 304.8 mm ) bar-type CTs:

Bar-Type CTs

(3) Class $J$ Fuse provisions are applicable only to 600 V units. When required, use price and dimensions of 600 V units for all voltages 600 and below.

## Pow-R-Stock Plus

## Product Description

Offering two options to meet the demanding schedule requirements of today's customers.

Type PRL1a Panelboard

- Factory-assembled panelboards available from your local satellite plant in 24 to 72 hours
- Unassembled panelboards in stock at authorized Pow-R-Stock Plus distributors

## The Product Offering

Pow-R-Stock Plus panels, available either as factoryassembled or as unassembled from distributor stock, are based on the most frequently ordered panelboards, including:

- 120/240V, 208Y/120V and $480 \mathrm{Y} / 277 \mathrm{~V}$ ratings
- 100-400A mains
- Single- and three-phase
- Surface and flush mounted
- Aluminum or copper bus
- Type 1 or Type 3R enclosures
- Service entrance available
- Options for 200\% neutrals and isolated ground bars
- Full menu of branch breakers available

## Factory-Assembled Panelboard Option

The Pow-R-Stock Plus factoryassembled panelboard option offers key advantages over programs that offer only unassembled panelboards.

## Reduced Installation Time

Unassembled panelboards must be assembled at the job site before the true installation process can begin, adding time and labor cost to the process. Pow-RStock Plus assembled panelboards are ready to install the moment they arrive at the job site.

## Reduced On-Site Material Handling

A typical 42-circuit unassembled panelboard has a minimum of 46 parts to receive and handle, taking up valuable time at the job site. A Pow-R-Stock Plus assembled panelboard is just one item to receive and handle (two if the box is shipped ahead).

## Factory Warranty

Field assembly of unassembled panelboards adds to contractor warranty responsibility. Pow-R-Stock Plus assembled panelboards carry a full factory warranty.

## Simplicity

Order your Pow-R-Stock Plus Panelboard by description and it will arrive at the job site complete. No need to worry about matching catalog number kits at the job site or chasing after miscellaneous parts and pieces.

Contact your local satellite plant (see next page for a listing) for more information on the Pow-R-Stock Plus factory-assembled panelboard option.

Pow-R-Stock Plus Program Includes the EZ Trim and EZ Box
Unassembled
Panelboard Option

Pow-R-Line 1a and 2a Panelboards are Designed to Provide Application Flexibility with Off-the-Shelf Service
The Pow-R-Stock Plus unassembled panelboard interior is designed specifically for distributor stock and field assembly. Its modular design allows for easy configuration in the field.

Top or bottom incoming, main lugs or main breaker...all with the same Pow-R-Stock Plus unassembled interior. Lug and breaker kits provide greater flexibility with fewer boxes, interiors and trims to stock.

## Color-Coded Package Labels

The box, interior and trim packaging are clearly identified with brightly colored labels (a different color for each box size). This facilitates stocking, filling orders, and matching components in the field.
Contact your local Eaton distributor for more details on the Pow-R-Stock Plus unassembled panelboard option.

## Eaton Distributors

Contact your Eaton sales office or local satellite manager and arrange to review the program details and criteria for qualification as a Pow-R-Stock Plus distributor.

## Customer Manufacturing Solution Centers

A unique concept of facilities close to customer locations, assuring fast delivery of standard- and custom-assembled equipment when it's needed.

Located at strategic locations throughout the United States, these facilities manufacture and deliver standard or custom-assembled panelboards, switchboards and enclosed circuit breakers... when and where you need them. And, when you have an emergency, they can have your equipment ready in hours.

Highly trained and experienced personnel will manage your order and ensure that you receive ontime delivery of high quality equipment that meets your specifications.

## Special Configurations

The unique capabilities of these plants and people can provide solutions for special products to meet special needs.

Typical examples include special dimensions, retrofit equipment and panelboard interiors to fit existing boxes.

## Speedy Delivery

- Panelboards: from one to five days.
- Switchboards: between five and 10 days.
- Assembled Enclosed Circuit Breakers: from one to 10 days.

## Save Time and Money

No matter your location, you will save time and money when ordering from a CMSC location. For more information, contact your Eaton representative or authorized distributor.

## Pow-R-Line Distribution Switchboards

## Product Description

Eaton's Pow-R-Line
distribution switchboards combine a space-saving design with modular construction and increased system ratings to provide economical and dependable electrical system distribution and protection.

## Application Description

Refer to Eaton's Consulting Application Guide.

## Features, Benefits and Functions

- 6000A maximum main bus rating
- 600 Vac and below
- 600 Vdc and below
- Front or rear accessible
- Type 1 or Type 3R enclosures
- ANSI-61 gray powder coat paint finish
- Microprocessor-based metering and monitoring devices
- Utility metering provisions
- Surge protective devices (SPD)
- Ground fault protection on mains and distribution devices
- Busway and transformer connections
- Complete protective device accessory capability
- 65 kAIC bus bracing standard; optional 100 or 200 kAIC
- Standard tin-plated aluminum bus; optional copper- or silver-plated copper bus
- Standard bus ampacities based on UL® heat test ratings. Optional density rated bus systems are also available

## Commercial Metering Switchboards

## Product Description

Eaton's commercial metering switchboards provide electrical system distribution and metering for shopping centers, office buildings and other commercial multimetering applications.

Using standard Pow-R-Line construction and features, these switchboards incorporate metering sections with tenant feeder circuits using meter sockets to meet local utility or customer requirements.

All meter sockets and associated feeder devices are completely factory prewired and shipped ready for the installation of the meters.

## Application Description

## Type WWCMS

For EUSERC serviced areas. The self-contained meter sockets include a test bypass/disconnect block per EUSERC requirements, and are arranged, typically, for hot sequence metering.

Switchboards

Group-Mounted Switchboards

## Features, Benefits and Functions

Pow-R-Line designates a family of distribution switchboards, incorporating design concepts that fit the ever-increasing need for applications on high short-circuit systems, while retaining maximum safety and convenience throughout the line.

## Front Accessible

Front-accessible switchboards align at the rear, enabling them to be placed against a wall (Pow-R-Line front accessible). If the main section is deeper than others, due to physical size of the main device, the necessary off-set in line-up will occur in front, and the main section will be accessible from the side as well as from the front. Standard front accessible switchboards will align at the front and rear.

## Rear Accessible

Rear-accessible switchboards align at the front and the rear. Bus maintenance and cable entry and exit require rear access. There are two types of rear accessible switchboards. Both types use the same incoming utility and/or main structures. The first type uses groupmounted feeder devices with panel construction (Pow-R-Line rear accessible). The second type uses individually compartmentalized feeder devices with load side insulated bus bar extensions (Pow-R-Line $i$ ).

## Standard Switchboard Height

Standard Pow-R-Line
switchboard height is 90 inches ( 2286.0 mm ).

## Group Mounting

Group-mounted circuit protective devices are an assembly of units mounted on a panelboard type base (panelboard construction). Units may be molded case breakers, or FDPW fusible switches. Circuit protective devices are accessible from the front.

A main molded case breaker or main FDPW fusible switch, within the sizes listed for panelboard design, can be included in the panelmounted assembly in lieu of a separate, individually mounted unit.

## Space Only for Future Devices Group-Mounted Construction

Where space only for future circuit protective devices is required, the proper space and a blank filler plate will be supplied. Connections and mounting hardware are not included.

## Provision for Future Devices

Where provisions for future circuit protective devices are required, space for the device, corresponding vertical bus, device connectors and the necessary mounting hardware will be supplied.

## Bus Bar System

Standard bus in the switchboards is tin-plated aluminum. Copper and silver-plated copper are also available.

Main bus and sub-main buses meet UL and NEMA standards for temperature rise on all Pow-R-Line switchboards. Special bus densities are available.

## Overcurrent Devices

To properly select and size overcurrent devices for use in a switchboard, the allowable temperature rise must be taken into account as to its effect on the tripping characteristics of the devices in question.
Accordingly, Article 220 of the $\mathrm{NECC}^{\circledR}$ requires overcurrent devices to be rated not less than $125 \%$ of the continuous load they are protecting. To comply with this, an $80 \%$ derating factor must be used with all overcurrent devices such as molded case breakers and FDPW fusible switches unless they are tested and marked as 100\% rated devices.

## Short-Circuit Rating

Standard bus and connectors on all switchboards are rated for use on systems capable of producing up to 65,000A rms symmetrical short-circuit current at the incoming terminals.

Increased bus short-circuit ratings equal to that of connected switchboard devices, up to 200,000A rms symmetrical, are available in most Pow-R-Line switchboards when approved main devices are installed. Contact Eaton for more information. UL labeled switchboard sections are marked with their applicable short-circuit rating.

## Provision for Busway Entrance and Exit

Busway connections to switchboard sections include cutout and drilling in the top of the switchboard with riser connections from the switchboard device or bus, up to the point where the bus duct enters the switchboard. No connections are furnished external to the switchboard.

Note: In all transactions involving busway attached to switchboards, it is essential that information regarding orientation of the busway with respect to the front of the switchboard be supplied to the coordinating assembly plant.

On Pow-R-Line switchboards, solid bus bar is used to connect the bus duct to the individually mounted main device, main or sub-main switchboard bus, or vertical main bus of panel mounted circuit protective device panels. Busway fed by groupmounted branch devices are cable connected.

Aluminum riser connections are standard. Copper- or silver-plated copper is available as a modification.

## Transitions

Transition structures are required for connecting switchboards to the secondary of power center transformer (dry or fluid filled), motor control centers, and for other special switchboard configurations such as "L" or "U" shaped lineups. In some application, an extra structure complete with connections is required; in others, where switchboard depth and space permit, only the connection conductors are required. Refer to factory for these applications.

## Standards and Certifications

- UL 891
- NEMA PB-2
- Seismically qualified

## Product Selection

For complete application and pricing information, contact your local Eaton sales office.

## Technical Data and Specifications

Service

- 120/240V, single-phase, three-wire
- 240/120V, 208Y/120V, $415 \mathrm{Y} / 240 \mathrm{~V}, 480 \mathrm{Y} / 277 \mathrm{~V}$ or $600 \mathrm{Y} / 347 \mathrm{~V}$ three-phase, four-wire
- 600 Vdc

## Main Bus Rating

- 400-4000A

## Service Section

- Main circuit breaker, 400-4000A
- Main fusible switch, 400-4000A
- Main lugs only, 400-6000A

## Metering Sections

- Tenant main disconnects and meter sockets (200A maximum self-contained metered circuits)
- Hot sequence metering circuits
- Cold sequence metering circuits (WCMS only)
- Optional rear barriered wireways or load side pull sections for cable exit requirements
- Sections for metered circuits larger than 200A available with 400A continuous rated selfcontained sockets or with CT compartment and transformer rated socket in combination with disconnect

Integrated Facility Switchboards
Features, Benefits and Functions
V2-T4-7
Standards and Certifications
Product Selection.
V2-T4-7

Other associated equipment can also be integrated into the assembly, including dry-type distribution transformers, time clock space, lighting control, electronic controls, surge protective devices, metering and energy monitoring devices. Depending upon the application, other userdefined equipment such as a subsystem control package may also be incorporated.

## Application Description

Eaton's Integrated Facility Switchboards are designed to meet specific needs for:

- Retail chain stores
- Commercial offices
- High rise buildings
- Correctional facilities
- Agricultural facilities
- Industrial facilities
- Hospitals/healthcare facilities
- Educational facilities

Whether the application is a multi-site prototype or single application, integrated switchboards offer time and space-saving features.

For complete application description, refer to Eaton's Consulting Application Guide.

## Features, Benefits and Functions

Front Accessible
Integrated Facility Switchboards are front accessible and align at the rear, enabling them to be placed against a wall. Most switchboards align at the front and the rear. If the main section is deeper than others, due to physical size of the main device, the necessary off-set in line-up will occur in front, and the main section will be accessible from the side as well as from the front.
Standard Switchboard Height
Switchboard height is 90 inches ( 2286.0 mm ).

A limited offering of 78-inch ( 1981.2 mm ) high equipment is available. Consult the factory for specific applications.

## Switchboard Shipping Splits

The sections can be shipped as specified by the customer to meet specific requirements.

For retrofit applications, single-piece switchboard structures can be shipped to facilitate movement through limited access doorways, etc.

## Factory Interconnections

Most sub-panels are fed from the main distribution panel feeder circuit breakers using copper cable sized per the NEC and UL.

## Space Savings

The space-saving switchboard installation provides additional usable floor space. For example:

- Retail stores-floor space for sales
- Offices-additional storage, cubicle
- Healthcare-additional work area
- Retrofits-ability to fit existing rooms

## Site Construction Savings

Timely installation of the electrical system typically is a key element on the critical path for any project.
Along with the time to install the equipment, other expenses include the time to handle all of the loose pieces of equipment arriving on a job site and ensuring it reaches the proper trades person. With Eaton's Integrated Facility Switchboards, one piece of equipment is typically shipped to a job site virtually eliminating these issues.

The equipment may also be used for temporary power on job sites, further reducing construction expenses and times.
Construction Savings

## Standards and Certifications

- Meets NEMA Standard PB-2 and UL 891
- Panelboards mounted inside the sections meet NEMA PB-1 and UL 67
- Other equipment is UL listed as applicable and appropriate

## Product Selection

Pow-R-Line Drawout Molded Case Circuit Breaker Switchboards

## Contents

Description
Pow-R-Line Drawout Molded Case Circuit Breaker Switchboards
$\qquad$
Dimensions
Options, Accessories and Modifications

## Product Description

- Drawout molded case circuit breaker switchboard
- Front accessible
- Front connected
- Through-the-door design drawout mechanism through 600A
- Insulated case UL 489 breakers up to 1200A
- Visual indication of breaker status and position
- Large grab handles for easy removal
- 600 Vac maximum
- 600A maximum, groupmounted, drawout molded case feeder breakers
- Individually mounted insulated UL 489 breakers through 1200A

## Application Description

- Drawout feeders in UL 891 distribution switchboards
- Rated as Service Entrance Equipment when appropriately equipped
- Ideal for:
- Data centers
- Industrial facilities
- Process equipment manufacturing
- Anywhere that requires quick change of feeder devices is needed

## Features, Benefits and Functions

Eaton's Pow-R-Line Drawout switchboard design is listed and labeled to the UL 891 standard. Switchboards may be rated up to 4000A. Main breakers are available up to 4000A in both fixed-mounted and drawout configurations. Main breakers may be Magnum DS® power circuit breakers or Magnum SB insulated case circuit breakers in either drawout or fixed-mounted configurations. Both are front-accessible configurations. Fixedmounted molded case circuit breaker mains are available up through 2500A.

Utility and customer-owned metering is available.
Customer metering includes Web-enabled communicating systems.

## Standards and Certifications

- UL 891 listed

## Instructions

On an interim basis until Bid Manager ${ }^{\text {TM }}$ is updated, please use the Pow-R-Line C ${ }^{\circledR}$ switchboard Bid Manager take-off as the basis for the following:

- Utility compartments
- Service entrance or nonservice entrance information
- Voltage
- Bus rating
- Bus material
- Nameplate
- Ground bus material
- Short-circuit current rating
- Top or bottom entrance
- Incoming cable location
- Customer metering
- Surge protective device
- Bus bracing

## Product Selection

Select drawout molded case circuit breaker and UL 489 listed insulated case circuit breakers from the following pages.

- Always select front access/ rear aligned
- IFS sections are permissible but will be bolt-on devices only
- Use the existing Pow-R-

Line C switchboard take-off to select main devices

## Contents

Description
Compartmentalized Switchboards
Standards and Certifications.
V2-T4-15

## Product Description

Eaton's Pow-R-Line $i$ switchboards are engineered in a new compartmentalized design for applications where a greater degree of safety is required. A wide variety of configurations is possible, including utility metering, customer metering, main devices, branch devices, accessories and enclosures.

## Application Description

Refer to Eaton's Consulting Application Guide.

## Features, Benefits and Functions

Significant safety features include:

- Individual compartments for branch devicesglass polyester for circuit breakers and steel for fusible switches. These compartments help eliminate possible contact with the main bus and reduce fault propagation
- Three-section construction with each section barriered from the other
- Device section-each device is mounted in its own compartment
- Bus bar sectioncontains both horizontal and vertical buses
- Rear cable compartmentcompletely isolated from the bus bars
- Insulated copper runback. Power is taken from the protective device by the insulated copper runback through a standard full height glass polyester barrier to the rear cable compartment. This design virtually eliminates the possibility of accidental contact with the main buses during installation or maintenance

Main devices are available from 400-4000A and can include molded case circuit breakers, Magnum SB, Magnum DS circuit breakers, FDPW fusible switches or bolted pressure switches. Main buses are rated up to 6000A.

Branch circuit breakers range from 15-1200A frames. When circuit breakers are used, higher ratings and increased series ratings will be achieved. Branch fusible switches are available from 100-1200A.

Interrupting ratings up to 200,000A are UL listed and the bus bar system may be braced from a standard 65,000A up to a maximum 200,000A.

## Integrated Monitoring Protection and Control Communications Systems

The capabilities of distribution and control assemblies can be expanded by tying together multiple devices in electrical distribution systems. From a central location (on-site or off-site), an operator uses a personal computer (master control unit) to monitor, control and communicate with compatible devices on a distribution system. These microprocessor-based devices, designed and built by Eaton, perform monitoring, protection and control functions.

## Ground Fault Test Panels

Pow-R-Line $i$ switchboards can accommodate either integral or zero sequence types of ground fault protection. Depending on the specific application, a test panel can be mounted in the circuit breaker compartment, which may eliminate the need for an auxiliary structure.

## Fusible Switches

Pow-R-Line $i$ switchboards have been designed to accommodate fusible switches. Safety is provided by steel compartments that insulate each horizontally mounted switch from the vertical and main buses. As with switchboards using circuit breakers, insulated copper runbacks carry power into the spacious, glass polyester barriered rear cable compartment.

## UL Listed Shunt Trip and Fusible Switches

Shunt trip attachments for use with ground fault protection devices can be installed on 400-1200A Type FDPW fusible switches. Both are UL listed when the shunt trip is factory installed.

## High Durability Finish

A baked-on polyester powder coating system protects all structural steel parts. It provides excellent mechanical strength and resistance to chalking normally caused by the sun's ultraviolet rays and meets the salt spray requirements of ASTM B-117.

## Pow-R-Line $\boldsymbol{i}$ Quality Assurance

Final testing helps ensure that each Pow-R-Line $i$ switchboard performs in accordance with UL standards and customer specifications. Each assembly is shipped with a "Switchboard Verification Report" that documents completion of every inspection and test.

## Provisions for the Future

Future expansion provisions include line side connectors, load side runbacks, terminals, and glass polyester compartments and covers (for circuit breakers). Space only for "both circuit breakers and fusible switches is also available.

## Standards and Certifications

Pow-R-Line i switchboards are UL 891 listed and meet all applicable requirements of NEMA and NEC. They are rear accessible and front and rear aligned. Both indoor and outdoor enclosures are available.

- Meets NEMA Standard PB-2 and UL 891
- Seismically qualified

## Product Description

Eaton’s Instant ${ }^{\circledR}$ Service Switchboards are designed as stocked units to provide fast delivery to match the needs of the construction market.

Suitable for use as service entrance equipment, they combine utility metering provisions with a fused main switch in a single compact section that can also include a distribution panel for feeder and branch circuit breakers.

## Application Description

Typical applications for these versatile switchboards include small office buildings and factories, stores, supermarkets and shopping centers.

## Features, Benefits and Functions

These switchboards are available in either indoor or outdoor enclosures manufactured of code-gauge steel with a durable light gray finish. All units are completely enclosed with front, rear and side covers. Outdoor units include a front hinged door.

The service section includes:

- Main lugs mounted at the top (two \#4-600 kcmil per phase) for overhead feed or for use with an underground pull section
- A sealable metering and CT compartment with bussing for utility bar type CTs and two 15-inch $(381.0 \mathrm{~mm}$ ) high meter compartment doors-one with provisions for meter socket and test block, one blank (meter socket is ordered separately)
- A 400 or 600A T-Type fused main switch or 400, 600 or 800A main circuit breaker with either load lugs (same as main lugs) or with connections to a factory installed distribution panel

Underground pull sections are available with lug landing kits providing studs for incoming cables per EUSERC standards and

two \#4-600 kcmil lugs per phase for cable connection to the service section.
Distribution panels can be included for 240 Vac maximum (single-phase three-wire or three-phase four-wire), 480Y/277 Vac (three-phase four-wire) or 480 Vac (three-phase threewire). The 240 V panels have provisions for four Type ED 225A frame circuit breakers and 24 poles of Type BAB 100A frame circuit breakers. The 480Y/277V panel has provisions for four Type FD 225A frame circuit breakers and 24 poles of Type GHB 100A frame circuit breakers. The bolt-on type circuit breakers are ordered separately.

For applications that require the load circuit conductors to exit at the top, a loadside wireway compartment is available that bolts to the service section.

Standard switchboards include two 15.00-inch $(381.0 \mathrm{~mm}$ ) high meter compartment doors, one with meter socket provisions and one blank. For other arrangements, accessory units are available. Check utility requirements.

## Standards and Certifications

Eaton's Instant Service Switchboards are listed by Underwriters Laboratories and comply with all applicable industry standards.
These switchboards meet EUSERC standards as well as other local utility codes.

## Seismic Qualified

Eaton's Instant Service Switchboards are seismically tested, seismically qualified and meet or exceed requirements of the Uniform Building Code ${ }^{\circledR}$ (UBC), the California Building Code (CBC) and the International Building Code (IBC) for all seismic zones.

## Notes

(1) 240V distribution panels have double branch provisions for four Type ED 225A frame circuit breakers and 24 poles of Type BAB 100A frame circuit breakers.
(2) 800A distribution panels have double branch provision for six Type FD 225A frame circuit breakers only
(3) Suffix-P: four Type FD 225A frame circuit breakers and 24 poles of Type GHB 100A frame circuit breakers.
(4) Suffix-K: one Type KD OR HKD 400A frame circuit breakers and four Type FD 225A frame circuit breakers.
(5) $480 \mathrm{Y} / 277 \mathrm{~V}$ distribution panels have double branch provisions for four Type FD 225A frame circuit breakers and 24 poles of Type GHB 100A frame circuit breakers.
(6) Check utility requirements-most EUSERC utilities require 30 -inch ( 762.0 mm ) width.
(7) Mounts in 30 -inch ( 762.0 mm ) wide section only.

Circuit breakers for distribution panels are ordered separately.

## Product Description

Eaton's roll-up generator termination boxes (RUGTB) are designed as an intermediate termination cabinet between temporary, portable roll-up generator and the facility being served. The RUGTB is designed for permanent installation and is secured to a concrete pad with bolts.

The RUGTB includes line terminations for the temporary connection of the portable generator and permanent connections on the load side to the secondary disconnect in the facility, which is interlocked with the main overcurrent device in a manner that ensures that only one (either the service main or the generator main) can be energized at any one time. The conductors and conduits must be sized and suitable for carrying the load ratings marked on the equipment per the National Electrical Code.

## Features

## Enclosure

The enclosure is freestanding with feet on the bottom, providing access to the cable connections for temporary roll-up generator terminations. The enclosure is made from code gauge steel and is suitable for either outdoor or indoor installation (Type 3R construction). The enclosure is powder coat painted ANSI 61 gray. Each enclosure houses line and load phase, neutral and ground connections. Access is provided at the bottom of the enclosure for both the temporary connections to the roll-up generator and permanent connections to the facility's generator overcurrent disconnecting means. The permanent connection section at the bottom of the enclosure contains a fixed mounting plate. The temporary generator connection to the RUGTB contains a hinged cover that allows access to the enclosure for generator conductors.

## Contents

Description
Roll-Up Generator Termination Box
Technical Data and Specifications
V2-T4-22
Dimensions . . . . . . . . . . . . . . . . . . . . . . . . . . . V2-T4-35

The enclosure uses feet that raise the termination compartment off finished grade by 18 inches (457.2 mm). Enclosure feet have provisions for anchoring the RUGTB. Anchor bolts secure the RUGTB and shall be encased in a concrete pad by the installer in a manner that is suitable as a permanent base for the unit. A template for anchor bolt installation is available from the manufacturer.

The enclosure contains a sturdy, lockable, hinged door for access to the termination compartment by qualified personnel as described in NFPA 70E and the National Electrical Code. Feeder conductor entry is provided in the bottom of the enclosure for the line side (generator). A hinged bottom plate is provided on the line side for access to line terminations. The permanent load connections (feeding to the facility overcurrent device) exit the enclosure from the bottom.

## Terminations

All roll-up generator termination boxes contain a termination/lug landing for three phases and neutral plus ground. Line termination options include mechanical lugs, one-hole and two-hole compression lugs, one-hole and two-hole compression lug provisions, and quick disconnect.

Lug provisions are provided with bolt configurations as described in the catalog data on the following pages. Where lug provisions are ordered, lugs are supplied by others.

## Standards and Certifications

- UL 1773 listedtermination boxes
- 600 Vac maximum
- Amperage ratings: 800, 1200, 1600, 2000 and 2500
- Assembly short-circuit rating: 25,000A rms symmetrical
- Marked "Suitable for use on the line side of service equipment" per UL 1773

## Notes

(1) Line side mechanical lugs are factory selected and installed.
${ }^{2}$ Load side factory installed $3 / 8$-inch bolt provisions for single-hole compression lugs (lugs furnished by others).
(3) Load side factory installed $1 / 2$-inch bolt provisions on $1-3 / 4$-inch hole centers for two-hole compression lugs (lugs furnished by others).
(4) Requires $45-\mathrm{inch}(1143.0 \mathrm{~mm})$ wide enclosure

## Notes

(1) Line side Anderson, single-hole compression lugs are factory selected and installed.
(2) Load side factory installed Burndy, two-hole, short barrel compression lugs suitable for copper wire only.
(3) Requires 45 -inch ( 1143.0 mm ) wide enclosure.
(4) Load side factory installed $3 / 8$-inch bolt provisions for single-hole compression lugs (lugs furnished by others).

## Notes

(1) Line side Anderson, single-hole compression lugs are factory selected and installed.
(2) Load side factory installed $1 / 2$-inch bolt provisions on $1-3 / 4$-inch hole centers for two-hole compression lugs (lugs furnished by others).
(3) Requires 45 -inch ( 1143.0 mm ) wide enclosure.
(4) Line side factory installed Burndy, two-hole, short barrel compression lugs suitable for copper wire only.
(5) Load side mechanical lugs are factory selected and installed.

## Pow-R-Line Multipoint Meter / PRC7500

## Overview

Allocation of energy consumption in a residential or commercial application is a tremendous task for a property owner, management firm or electrical energy manager. To assist in allocation or direct billing of consumed energy, use Eaton's Pow-R-Line Multipoint Meter or Pow-R-Command ${ }^{\text {TM }} 7500$ (PRC7500) low cost solutions. The Pow-R-Line Multipoint Meter / PRC7500 provides a cost-effective energy tabulation system for residential or commercial metering installations. These installations can include:

- High-rise buildings
- Universities and campuses
- Office buildings
- Apartment and condominium complexes
- Shopping malls
- Airports
- System commissioning is required and priced separately

When there is a need for accurate information of consumed energy for monthly invoicing statements, use Eaton's Multipoint Meter solution. Using the Multipoint Meter for utility allocation maximizes revenue by effectively measuring, allocating and recovering utility expenditures. The Multipoint Meter solution can interface with a third-party utility allocation service and offers the following advantages:

- Purchase energy at bulk rates while charging consumer rates
- Capitalize on naturally variable tenant loads by purchasing energy at a lower coinciding load
- Capture and allocate common area maintenance cost
- Promote tenant retention with accurate and defensible billing
- Eliminate subsidization of other tenants

## Pow-R-Line Multipoint Meter

## Product Description

Using Eaton's Pow-R-Line Multipoint Meter design, multiple tenant submetering has never been easier. The Pow-R-Line Multipoint Meter combines the Power Xpert ${ }^{\circledR}$ Multi-Point Meter and Eaton's PRL4, PRLC or Integrated Facility System ${ }^{\text {TM }}$ (IFS ${ }^{\text {TM }}$ ) to provide a space-saving, cost-effective energy tabulation system for residential or commercial metering installations.

## Application Description

With energy cost on the rise, it is vital to proactively monitor and conserve electrical energy. Documentations of electrical energy usage can promote energy conservation for tenants or business departments. When the need for accurate energy consumption information for monthly tenant invoicing arises, use Eaton's Pow-RLine Multipoint Meter solution.

Using the Multipoint Meter for utility allocation maximizes revenue by effectively measuring, allocating and recovering utility expenditures. The Pow-R-Line Multipoint Meter, using Eaton's costallocation software or a thirdparty billing software, can generate single-rate or multirate billing.

## Features, Benefits and Functions

The Pow-R-Line Multipoint Meter offers the property owner or the property management firm the ability to:

- Capture and allocate common area maintenance cost
- Promote tenant retention with accurate billing
- Eliminate subsidization of other tenants

The Pow-R-Line Multipoint Meter space-saving design reduces the need for multimetering equipment for each tenant. Additionally, the Pow-R-Line Multipoint Meter can monitor loads up to 5000A for energy billing or cost allocation. The meter is rated per ANSI C12.20 for revenue metering grade accuracy. With built-in communications capabilities, the Pow-R-Line Multipoint Meter can be connected to a local PC or network. The Pow-R-Line Multipoint Meter can connect to a third-party billing service to provide monthly energy consumption charges used by tenants. Additionally, unit status and communication activity are provided by a display on the metering compartment front panel.

The Pow-R-Line Multipoint Meter device can measure up to 60 total poles in any combination of single-, two- or three-pole breakers. The meters and current sensors are factory mounted with the current sensors factory wired to the meter inside the host structure. The meter monitors power and energy including instantaneous (kW), demand and cumulative ( kWh ) measurements for each load. The meter provides the following:

- Interval energy data logging
- Time-of-use energy registers
- Coincident peak demand storage
- Schedule remote meter reading data in non-volatile memory
- Measure bus voltage

## Options

- Energy Portal Module or Ethernet-based communications plus Modbus ${ }^{\circledR}$ TCP and BACnet/lP
- Pulse input module for WAGES inputs
- Digital output module for programmable alarm functions

Multipoint Meter (MPM)

## PRC7500-Tenant Metering

## Product Description

Leading property management companies around the world are realizing the time and cost savings of tenant metering in residential, commercial and industrial applications.

Allocating energy consumption can be a tremendous task for any property owner, management firm or electrical energy manager. Eaton's PRC7500 is a solution that combines Eaton's IFS switchboards with Quadlogic ${ }^{\circledR}$ electrical meters and current transformers for a cost-effective energy tracking system perfect for many applications.

## Application Description

Imagine the success of tenant metering in these installations:

- Apartments, town homes, condominium complexes
- Shopping malls
- High-rise office buildings
- Universities and campuses
- Airports
... and more!

Layout Guide
V2-T4-39

## Features, Benefits and Functions

Eaton's reliable IFS is integrated with Quadlogic's Power Line Communications technology, that transmits meter data over a building's existing power lines. That means:

- Factory-assembledsaves time
- No additional wiring
- No meter readers required

This system proves to provide reliable and accurate data needed to bill tenants, allocate energy costs and make smart energy decisions.
In addition, PRC7500 Tenant Metering also affords the following benefits:

- Energy costs allocated to individual tenants or departments within the building
- Allocate common area electric charges
- Create revenue by purchasing bulk rate energy
- Retain happy tenants with fair and accurate allocation of energy costs
- Commercial, residential or industrial applications
- Meters up to 12 (two-pole) tenants or eight (threepole) tenants per meter
- Reliable power line communications
- Interval data and time-of-use capability
- Event profiling (power down, demand resets, tampers, etc.)
- Load profiling
- Collects data from water and gas meters
- Easy to install
- Proven accuracyANSI compliant
- Cost-effective-saves on equipment cost and installation

# Switchboards 

- Integrated Pow-R-Line Communications-uses existing electrical wiring for communications; requires no dedicated hard wires, additional modules or attachments for communications
- Flexible data programming-interval data down to 5 minutes allows for flexible load profiling and time-of-use billing options
- Accurate-meets ANSI C12.1 specifications and stringent requirements of Measurement Canada (AE-1148)
- Comprehensive information-event reporting with date and time stamps regarding power consumption, demand reset, power-ups and power-downs, time changes and tampers
- Liquid crystal display LCD—provides consumption readings for each tenant
- Multi-utility submetering system—integrates and stores pulse data from gas and water meters
- Power quality datameasures four-quadrant energy to analyze power quality
- Data integrity—uses flash memory for accurate storage and integrity without battery reliance
- Installation verification display-allows on-site verification of proper installation

## Layout Guide

Refer to Eaton's Consulting
Application Guide.
The MiniCloset-5 has a display incorporated into the meter.
A shorting terminal block is provided to connect between the MiniCloset-5 and the current transformers. An optional component for collecting data from the MiniCloset-5 meters is the Scan Transponder-5 (mounted separately) $-13.50 \mathrm{H} \times 8.50 \mathrm{~W}$ x 4.50 D in inches ( 342.9 Hx 215.9 W x 114.3 D in mm).

Transfer Switch Equipment

## Product Description

Eaton's automatic transfer switches are reliable, rugged, versatile and compact assemblies for transferring essential loads and electrical distribution systems from one power source to another.

Transfer switches can be supplied in separate enclosures for stand-alone applications or can be supplied as an integral component in the following equipment (see table below).

## Product Type

| Description | Section <br> Reference |
| :--- | :--- |
| Magnum DS Switchgear | Vol. 3, Tab 4 |
| DSII Switchgear | Vol. 3, Tab 4 |
| Pow-R-Line ${ }^{\circledR}$ Switchboards | Vol. 2, Tab 4 |
| Motor Control Centers | Vol. 3, Tab 3 |
| Panelboards | Vol. 2, Tab 3 |

## Typical Applications

All Eaton transfer switches are designed to meet the requirements set forth by UL 1008; however, all transfer switches are not created equal. You can be assured of safe and reliable operation from all types of transfer switches that Eaton offers.

## Basic Components

The three basic components of a transfer switch are:

- Power switching device to shift the load circuits to and from the power source
- Transfer logic controller to monitor the condition of the power sources and provide the control signals to the power switching device
- Control power source to supply operational power to the controller and switching device

## Application Description

A transfer switch is a critical component of any emergency or standby power system. When the normal (preferred) source of power is lost, a transfer switch quickly and safely shifts the load circuit from the normal source of power to the emergency (alternate) source of power. This permits critical loads to continue running with minimal or no outage. After the normal source of power has been restored, the retransfer process returns the load circuit to the normal power source.

Transfer switches are available with different operational modes including:

- Manual
- Non-automatic
- Automatic
- Bypass isolation
- Maintenance bypass

## Switch Types

Manual transfer-This type of transfer is a non-automatic transfer switch manually initiated and manually operated. There is no motor operator or solenoid to initiate the transfer. The operator needs to open the enclosure door and operate the manual handle. Manual transfer is available only on a breakerbased design. Service entrance ratings are not available on manual transfer breaker-based designs.

## Non-automatic transfer-

This type of transfer is manually initiated, but electrically operated via the solenoid in a contactor-based design and the motor operator in a breaker-based design.

Automatic transfer-This type of transfer takes place automatically per the programmable settings in the ATS controller. The ATS controller senses source availability and when the programmed conditions are met, initiates a command to start the transfer including the generator start command (when transferring from a utility to a generator source). An automatic transfer switch can be configured to perform a utility-to-utility transfer or a generator-to-generator transfer (provided the ATS controller has this capability).

## Bypass isolation transfer

 switch-This type of transfer switch includes an automatic transfer switch and also includes the bypass switch that allows the capability to transfer the load to the bypass switch without interrupting the power.
## Maintenance bypass

 transfer switch-A maintenance bypass transfer switch is a non-automatic (manually initiated and electrically operated) initiated transfer switch used for specific applications for a UPS.The power switching operation of transfer switches may be separated into the following transition modes:

## Transition Types

Open transition-This is a "break-before-make" transfer. There is a definite break in power as the load is taken off one source and connected to the other source.

Open in-phase transition-
This is a "break-beforemake" transfer. There is a definite break in power as the load is taken off one source and connected to the other source. The ATS controller allows the transfer only when the phase difference between the two sources is near zero. The two position transfer switch is closed on Source 1 or closed on Source 2.

Open in-phase with default to time delay neutral-break-before-make operation using an in-phase monitor for source synchronization. If the in-phase does not initiate a transfer within a programmable time delay, then the transfer will default to a time delay neutral type of transfer.

Delayed transition-This is a "break-before-make" or open transition that also has a "center off" or neutral position with a programmable time delay setting for the neutral position. The three position transfer switch is either closed on Source 1, closed on Source 2, or in a center off, neutral position (not closed on either source).
Delayed transition with load voltage decay-This is a delayed transition with the optional feature to delay in the neutral position to point where the load voltage decays to a programmable voltage level. When the load voltage level reaches the programmable set point, the transfer from the neutral position initiates.
Closed transition-This is a "make-before-break" transfer. Both sources are connected to the load for less than 100 ms before the break occurs. The two power sources have to be in synchronism and be good sources for the transfer to take place. These programmable settings for relative phase angle difference, frequency and voltage difference are made in the ATS controller.

Transfer Switch Equipment

## Switch Position Types

The power switching device in an automatic transfer switch may be designed as either a two-position or a three-position operation. A two-position switching device can only be closed on Source 1 or closed on Source 2. There is no center off or neutral position. A three-position switching device can be closed on Source 1, closed on Source 2, or be in the center off or neutral position.

## 5 Transition Types

| Transition | Contactor-Based |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
|  | Two <br> Position | Three <br> Position | Breaker- <br> Based | Magnum- <br> Based |
| Open | Yes | Yes | Yes | Yes |
| Open in-phase | Yes | No | No | Yes |
| Open in-phase default TDN | No | Yes | No | Yes |
| Delayed time delay neutral | No | Yes | Yes | Yes |
| Delayed load voltage decay | No | Yes | Yes | Yes |
| Closed | Yes | Yes | No | Yes |

## Fully Rated Fourth Pole (Switched Neutral)

Eaton provides a fully rated switched neutral or fourth pole, meaning that the fourth pole has withstand, interrupt and closing ratings identical to the power contacts. The neutral pole is operated on a common shaft with the power contacts, thereby ensuring simultaneous opening and closing of the switched neutral. Eaton's fully rated fourth pole eliminates typical problems with a three-pole overlapping neutral:

- Eliminates nuisance ground trips at the main due to circulating zero sequence harmonic current between sources
- Reduction in ground current due to isolated single ground point lowers arc-flash levels and reduces generator damage
- Eliminates potential for faults to propagate across overlapping neutral; fully rated fourth pole will handle as a normal operation
- Does not generate voltages that exceed normal phase voltage

Note: For more detail, reference Eaton White Paper IA08700002E.

## UL 1008 Endurance Testing

The importance of specifying a UL 1008 transfer switch can be seen in the table below. When specifying any UL 1008 transfer switch, you can be assured the switch has met and passed the following endurance testing.

UL 1008 Endurance Testing

| ATS Rating <br> (Amperes) | Rate of Operation <br> Per Minute | With <br> Current | Without <br> Current | Total |
| :--- | :--- | :--- | :--- | :--- |
| $0-300$ | 1 | 6000 | - | 6000 |
| $301-400$ | 1 | 4000 | - | 4000 |
| $401-800$ | 1 | 2000 | 1000 | 3000 |
| $801-1600$ | 0.5 | 1500 | 1500 | 3000 |
| $1601-4000$ | 0.25 | 1000 | 2000 | 3000 |

## UL 1008 Life Expectancy

Transfer switch applications typically require a plant exerciser once a week or once a month. The table below demonstrates the life expectancy operating the UL 1008 switch once a week for the life of the switch.

UL 1008 Life Expectancy

| ATS Rating <br> (Amperes) | Minimum <br> Operations <br> Per Year | Life Expectancy <br> in Years With <br> Current Applied | Life Expectancy <br> in Years Without <br> Current Applied |
| :--- | :--- | :--- | :--- |
| $0-300$ | 52 | 115 | 115 |
| $301-400$ | 52 | 76 | 76 |
| $401-800$ | 52 | 38 | 57 |
| $801-1600$ | 52 | 28 | 57 |
| $1601-4000$ | 52 | 19 | 57 |

## Utility—Generator

Transfer switches are traditionally applied between a utility and a generator set for emergency and standby power systems.

## Generator-Generator

Transfer switches are sometimes applied between two generator sets for prime power use, often in remote installations. In such applications, source power is periodically alternated between the generator sets to equally share run time.

## Service Entrance Rated Transfer Switches

Modifying the molded case switch in the transfer switch by adding trip units and optional ground fault, along with adding the service entrance option eliminates the need for separate upstream disconnect devices and their respective power interconnections. This means the automatic transfer switch (ATS) is installed directly at the point of service entrance, saving valuable space and cost.

Eaton service entrance rated transfer switches have a $100 \%$ integrated rating. The ATS as well as the supplied breaker may be applied at $100 \%$ of the ATS rating, thus eliminating the need to consider any de-rating factors based upon the breaker rating.

The Eaton service entrance rated ATSs have been tested to and have successfully passed the stringent requirements of UL 1008 and carry the integrated UL 1008 rating. This rating ensures the end user that the ATS has passed the dielectric test, endurance test, overload test, withstand rating test and temperature rise requirements of UL 1008.

## Built-In Protection

All Eaton molded case switches are "self protected," such that under extreme fault conditions, the switch will open before destroying itself. This feature allows Eaton to offer "Maintenance-Free Contacts" on the molded case transfer switch. The molded case switches have instantaneous magnetic trip units installed in each switch. These trips are not accessible once installed by the factory to eliminate field tapering. The trips are set to a minimum of 12 to 15 times the rated current of the molded case device, well above any coordination set points. This means they will not interfere with the normal operation of the distribution system and will only trip if something is very wrong.

Typical Transfer Switch Installation

Built-In Protection
Example: 400 Ampere ATS With 500 Ampere T/M Breaker
400 FLA $\times 1.25=500$ Ampere Breaker
Compare 400 Ampere ATS and 500 Ampere LD Breaker

## Automatic Open Transition, 40-1600 A

## Product Description

The automatic open transition contactor-based transfer switch is the most basic design that will provide a fully functioning automatic transfer switch.

The power switching operation of Eaton's contactor-based transfer switches may be separated into the following key categories of:

- Open in-phase transition-break-before-make operation utilizing an inphase monitor for source synchronization
- Open delayed transition-break-before-make operation utilizing a programmable time delay (true neutral position)
- Open in-phase with default to time delay neutral—break-beforemake operation utilizing an in-phase monitor for source synchronization. If the in-phase does not initiate a transfer within a programmable time delay, then the transfer will default to a time delay neutral type of transfer

The open in-phase transition utilizes a two-position mechanism and the open delayed transition utilizes a three-position mechanism. The mechanism used to operate the Eaton electrical contactor is a momentarily energized solenoid consisting of a stationary core and a moving core that is magnetically driven by an electrical coil.

The mechanism can be electrically and mechanically operated. The design is such that the mechanism is inherently interlocked so the device cannot be closed on the Source 1 and Source 2 at the same time under any circumstances. When switching from Source 1 to Source 2, or Source 2 to Source 1, the mechanism will only allow a break-beforemake operation.

These contactor-based designs can be applied with the ATC-100 controller up to 400 A. The ATC-100 controller is recommended for residential or light commercial applications. Eaton recommends for emergency or legally required application that an ATC-300+ or ATC-900 controller be used. Applications requiring the ATC-300+ controller can be applied for applications 40-1600 A. Applications needing communication capability require the ATC$300+$ with communication or the ATC-900 controller.

## Application Description

An automatic open transition transfer switch may be used for those applications where emergency backup power is required, but a momentary loss of power is acceptable on the retransfer from emergency to normal.

## Features, Benefits and Functions

## Standard Features

- Auxiliary relay contacts:
- Source 1 present 2NO and 2NC
- Source 2 present 2NO and 2NC
- Switch position indication contacts:
- Source 1 position 1NO and 1NC
- Source 2 position 1NO and 1NC
- Source 1 and Source 2 sensing:
- Undervoltage/ underfrequency
- Overvoltage/ overfrequency
- Three-phase rotation protection
- Three-phase voltage unbalance
- Pretransfer signal contacts 1NO/1NC (with threeposition mechanism)
- Go to emergency (Source 2)
- Seven field-programmable time delays
- LCD-based display for programming, system diagnostics and Help message display
- Mimic diagram with source available and connected LED indication
- Time-stamped history log
- System TEST pushbutton
- Programmable plant exerciser-OFF, daily, 7-, 14-, 28-day interval selectable run time 0-600 minutes no load/ load with fail-safe
- Modbus ${ }^{\circledR}$ RTU via RS-485

## Optional Features

- Available surge suppression device for power/controller, engine start circuit, phone and cable connections
- Space heater with thermostat
- Eaton IQ and Power Xpert ${ }^{\circledR}$ series metering
- Stainless steel cover for controller
- Open in-phase transition, time delay neutral or inphase with a default to time delay neutral transfer
- ATC-100 and ATC-900 controllers available
- Source 2 inhibit
- Manual retransfer to normal
- Remote annunciator with control
- Ethernet communication (PXG 400 Gateway)

## Commercial Design Highlights

- UL 1008 front access
- High withstand and closing ratings
- Compact design

# Transfer Switches 

## Automatic Closed Transition, 40-1200 A

## Product Description

Eaton's closed transition contactor-based automatic transfer switch is designed to avoid intentional interruption of power when both sources of power are available by momentarily paralleling both sources.

The controller is a comprehensive, multifunction, microprocessorbased controller, offering extensive monitoring, status reporting and transfer control operation.

The make-before-break contact sequence coupled with Eaton's ATC-900 provides a transfer switch that is useful in critical standby power applications available from 40-1200 A.

## Application Description

A transfer switch designed for closed transition has make-before-break contacts that require the normal and alternate sources to be synchronized. The source contacts on Eaton's controller will parallel for 100 ms or less. The controller provides all-phase undervoltage, underfrequency, and overvoltage and overfrequency protection as a standard. Consult with the local utility company for permission and to verify the protection requirements as each utility may have different rules regarding closed transition applications. Protective relays may be available as an option upon request.

## Closed transition controls

The switch accomplishes the closed transition transfer by monitoring the voltage and frequency set point conditions of both power sources. Once the set point conditions are met, the controller will start the closed transition synchronization timer (TSCT). The TSCT is adjustable from 1-60 minutes in duration. This duration is the time during which the controller will monitor the phase angles to anticipate when they will be within 8 electrical degrees. The closed transition scheme is anticipatory, allowing the close contacts signal to be initiated before the sources are exactly in phase. If the TSCT times out and the transfer switch has not reached synchronization, the transfer switch will remain connected to the current power source and a failure to transfer alarm will be displayed.

The transfer switch can also be equipped with an optional open transition transfer method for situations where synchronization is not possible, but a transfer is required. One of the following transition features can be selected:

- Closed transition only
- Closed transition with default to load voltage decay
- Closed transition with default to time delay neutral

## Bypass Isolation Transfer Switches, 40-1600 A, Dual Drawout

## Product Description

A bypass isolation transfer switch may be used to provide emergency power to life safety and other critical loads where maintenance of the main transfer switch, without interruption of power to the load, is either desirable or required

## Application Description

Eaton's Automatic Transfer Switch is designed to provide unmatched performance, reliability and versatility for critical standby power applications. The switches can be equipped with the ATC-300+ or ATC-900 controllers to match your application needs.

A bypass isolation automatic transfer switch by application requirements and per UL 1008 requires the main automatic transfer switch contactor (ATS) to be a drawout design. Conventional designs allow the bypass contactor to be a fixed-mounted design. The Eaton premium design provides a drawout ATS and a drawout bypass contactor or a dual drawout design.

## Features, Benefits and Functions

## Industrial Design Highlights

- Front access is a standard feature on all ratings
- Entry:
- Top, bottom or both
- Isolated compartments
- Improved safety:
- Isolated compartments with barriers
- Single motion rack-out with doors closed
- Ability to test power switching elements during drawout process
- Dual ATS capabilitybypass contactor can be controlled by the ATS controller in the bypass mode of operation
- Installation flexibility:
- Field entry/exit locations can be modified in the field
- Interchangeable drawout contactors
- Field-selectable multi-tap transformer panel permits operation on a wide range of system voltages
- Dual drawout

## Standard Features

- Drawout cassette design on both ATS and bypass
- No service interruption in bypass to the same source
- Source available contacts:
- Source 1 present 2NO and 2NC
- Source 2 present 2NO and 2NC
- Switch position contacts:
- Source 1 position 1NO and 1NC
- Source 2 position 1NO and 1NC
- Source 1 and Source 2 sensing:
- Undervoltage/ underfrequency
- Overvoltage/ overfrequency
- Three-phase rotation protection (ATC-300+ only)
- Three-phase voltage unbalance/loss (ATC-300+ only)
- Pretransfer signal contacts 1NO and 1NC (open transition only)
- Go to Source 2 (EMERGENCY)
- Field-programmable time delays:
- Time delay engine start: 0-1200 seconds
- Time delay normal to emergency: 0-1800 seconds
- Time delay emergency to normal: 0-1800 seconds
- Time delay engine cooldown: 0-1800 seconds
- Time delay emergency failure: 0-6 seconds
- LCD-based display for programming, system diagnostics and Help menu display
- Mimic diagram with source available and connected LED indication
- Time-stamped history log
- System TEST pushbutton
- Programmable plant exerciser-OFF, daily, 7-, 14-, 28-day interval selectable run time 0-600 minutes no load/ load with fail-safe

## Optional Features

- Available UL 1448 Third Edition surge protection device (SPD)
- Eaton IQ and Power Xpert multi-function power quality metering
- Automatic transfer mode with selectable nonautomatic/automatic retransfer mode
- Modbus RTU via RS-485
- Remote annunciation with control
- Open in-phase transition, time delay neutral or inphase with a default to time delay neutral transfer
- ATC-900 controller
- Includes Modbus RTU via RS-485
- Includes four programmable inputs/ outputs
- Includes two plant exercisers
- Includes LCD color display with easy navigation tools to settings and event logs
- Expandable I/O (up to 20 I/O total)
- Optional integrated load metering
- Optional EtherNet TCP/ IP communications

## Bypass Isolation Switch Components <br> Front Access

Front access is a standard feature. Source 1 (NORMAL) Source and Load connections are set up as standard top entry and Source 2 (EMERGENCY) Source connections as bottom entry. These connections are located in their own separate compartments. These connections can be relocated in the field if necessary.

## Multi-Tap Transformer

The industry-exclusive multitap system voltage selector allows the transfer switch to be applied on most system voltages by proper insertion of the selector plug.

## Drawout Contactors

The ATS and the bypass drawout cassette power contactor designs are identical and interchangeable. This standard feature
allows the user the ability to withdraw, maintain or swap contactor assemblies, providing redundancy of ATS and bypass functions from one contactor assembly to the other.

## Improved Safety

The unique Eaton design includes separation between control and power components. The ATS and bypass isolation contactors are mounted in separate compartments with protective barriers between them. This design prevents the possibility of contact with the rear-mounted power connections to the contactors. In addition, the top and bottom entry have separate compartment doors.

## Ease of Maintenance

Transfer to the bypass power contactor is easily initiated and controlled via doormounted controls. Once the transfer to the bypass contactor is complete, the ATS contactor is easily racked out with the compartment door closed.

The ATS contactor may then be tested in the racked out position.

## Ease of Transfer

The Eaton design allows the operator to make a quick and simple transfer from the ATS power contactor to the bypass contactor by initiating the electrically operated transfer via a two-position switch. Door-mounted indicating lights confirm that a successful transfer has taken place.

## Dual ATS Capability

The controller on conventional bypass isolation switches only controls the ATS contactor The Eaton design allows the switch controller to remain active in both the ATS and bypass modes, thus providing control to either contactor. This ability of the controller to remain active and control the bypass isolation contactor provides " $\mathrm{N}+1$ " redundancy of a second fully functioning ATS, a feature unique to Eaton.

Bypass Isolation Switch Components

## Standards and Certifications

- UL 1008 listed
- CSA C22.2 No. 178 certified

## Catalog Number Selection

## Bypass Isolation Transfer Switches, 40-1200 A, Fixed Bypass

## Product Description

A bypass isolation transfer switch may be used to provide emergency power to life safety and other critical loads where maintenance of the main transfer switch, without interruption of power to the load, is either desirable or required.

## Application Description

Eaton's Automatic Transfer Switch is designed to provide unmatched performance, reliability and versatility for critical standby power applications. The switches can be equipped with the ATC-300+ or ATC-900 controllers to match your application needs.

## Features

## Industrial Design Highlights

- Front access is a standard feature on all ratings
- Entry:
- Top, bottom or both
- Isolated compartments
- Improved safety:
- Isolated compartments with barriers
- Single motion rack-out with doors closed
- Ability to test power switching elements during drawout process
- Dual ATS capabilitybypass contactor can be controlled by the ATS controller in the bypass mode of operation
- Installation flexibility:
- Field entry/exit locations can be modified in the field
- Interchangeable drawout contactors
- Field-selectable multi-tap transformer panel permits operation on a wide range of system voltages
- Fixed-mounted bypass, drawout ATS

## Standard Features

- Drawout cassette design on ATS with fixed-mounted bypass
- No service interruption in bypass to the same source
- Source available contacts:
- Source 1 present 2NO and 2NC
- Source 2 present 2NO and 2NC
- Switch position contacts:
- Source 1 position 1NO and 1NC
- Source 2 position 1NO and 1NC
- Source 1 and Source 2 sensing:
- Undervoltage/ underfrequency
- Overvoltage/ overfrequency
- Three-phase rotation protection (ATC-300+ only)
- Three-phase voltage unbalance/loss (ATC-300+ only)
- Pretransfer signal contacts 1 NO and 1 NC (open transition only)
- Go to Source 2 (EMERGENCY)
- Field-programmable time delays:
- Time delay engine start: 0-1200 seconds
- Time delay normal to emergency: 0-1800 seconds
- Time delay emergency to normal: 0-1800 seconds
- Time delay engine cooldown: 0-1800 seconds
- Time delay emergency failure: 0-6 seconds
- LCD-based display for programming, system diagnostics and Help menu display
- Mimic diagram with source available and connected LED indication
- Time-stamped history log
- System TEST pushbutton
- Programmable plant exerciser-OFF, daily, 7-, 14-, 28-day interval selectable run time 0-600 minutes no load/ load with fail-safe (ATC-300+ only)

## Optional Features

- Available UL 1448 Third Edition surge protection device (SPD)
- Eaton IQ and Power Xpert multi-function power quality metering
- Automatic transfer mode with selectable nonautomatic/automatic retransfer mode
- Modbus RTU via RS-485
- Remote annunciation with control
- Open in-phase transition, time delay neutral or inphase with a default to time delay neutral transfer
- ATC-900 controller
- Includes Modbus RTU via RS-485
- Includes four programmable inputs/ outputs
- Includes two plant exercisers
- Includes LCD color display with easy navigation tools to settings and event logs
- Expandable I/O (up to 20 I/O total)
- Optional integrated load metering
- Optional EtherNet TCP/ IP communications

## Bypass Isolation Switch Components <br> Front Access

Front access is a standard feature. Source 1 (NORMAL), Source 2 (EMERGENCY) and Load connections are set up as bottom entry. These connections are located in their own separate compartments.

## Multi-Tap Transformer

The industry-exclusive MultiTap system voltage selector allows the transfer switch to be applied on most system voltages by proper insertion of the selector plug.

## Drawout ATS and FixedMounted Bypass

The ATS is designed as a drawout with the contactor mounted in a cassette with wheels. This allows the
user the ability to withdraw, maintain, inspect and re-insert the ATS.

The bypass unit is designed as a fixed-mounted design in its own separate compartment.

## Improved Safety

The unique Eaton design includes separation between control and power components. The ATS and bypass isolation contactors are mounted in separate compartments with protective barriers between them. This design prevents the possibility of contact with the rear-mounted power connections to the contactors. In addition, the top and bottom entry have separate compartment doors.

## Ease of Maintenance

Transfer to the bypass power contactor is easily initiated and controlled via doormounted controls. Once the transfer to the bypass contactor is complete, the ATS contactor is easily racked out with the compartment
door closed. The ATS contactor may then be tested in the isolated position.

## Ease of Transfer

The Eaton design allows the operator to make a quick and simple transfer from the ATS power contactor to the bypass contactor by initiating the electrically operated transfer via a two-position switch. Door-mounted indicating lights confirm that a successful transfer has taken place.

## Dual ATS Capability

The controller on conventional bypass isolation switches only controls the ATS contactor. The Eaton design allows the switch controller to remain active in both the ATS and bypass modes, thus providing control to either contactor. This ability of the controller to remain active and control the bypass isolation contactor provides " $\mathrm{N}+1$ " redundancy of a second fully functioning ATS, a feature unique to Eaton.

## Service Entrance Rated Automatic Open Transition, 40-1600 A

## Product Description

The service entrance rated automatic open transition contactor-based design transfer switch will provide a fully functioning automatic transfer switch with an integrated upstream breaker to be applied and installed directly at the point of service entrance.

Eaton's service entrance rated contactor design has been tested and is listed as a 100\% rated UL 1008 ATS (automatic transfer switch). In addition, the service entrance rated ATS will have a $100 \%$ load rating. The capability to provide a $100 \%$ load rating eliminates confusion in applying a $100 \%$ rated ATS with a breaker that is only rated for $80 \%$ load.

The combined package will provide the ATS in a separate compartment from the upstream breaker. The breaker compartment has a deadfront panel, allowing easy and safe access to the separate contactor compartment when the breaker is tripped to the off position and locked out. Line side connections are made in the breaker compartment and Source 2 and load connections are made in the contactor compartment. The main contactor compartment includes the main power switching device, auxiliary relays, control power and the controller.
The upstream breaker will use the Eaton 310+ trip unit, allowing the user to modify the continuous current rating, adjustable protection curve shaping with LSI or LSIG adjustability and optional selection of the Arcflash Reduction Maintenance System to address National Electrical Code ${ }^{\circledR}$ Section 240.87 for arc energy reduction.

## Application Description

The service entrance rated contactor-based design can be used on applications requiring an integrated automatic transfer switch with an upstream breaker. The combined or integrated offering can be used and will come listed as a $100 \%$ rated to UL 1008 as suitable for use as service equipment. In addition, the transfer switch will be marked as
"Continuous load current not to exceed 100 percent of switch rating."

Contactor-Based Designs

## Features

## Standard Features- <br> with ATC-300+ Controller

- Auxiliary relay contacts:
- Source 1 present 2NO and 2NC
- Source 2 present 2NO and 2NC
5
- Switch position indication contacts
- Source 1 position 1NO and 1NC
- Source 2 position 1NO and 1NC
- Source 1 and Source 2 sensing:
- Undervoltage/ underfrequency
- Overvoltage/ overfrequency
- Three-phase rotation protection
- Three-phase voltage unbalance
- Pretransfer signal contacts 1NO/1NC (with threeposition mechanism)
- Go to emergency (Source 2)
- Seven field-programmable time delays
- LCD-based display for programming, system diagnostics and Help message display
- Mimic diagram with source available and connected LED indication
- Time-stamped history log
- System TEST pushbutton
- Programmable plant exerciser-OFF, daily, 7-, 14-, 28-day interval selectable run time 0-600 minutes no load/load with fail-safe
- Modbus ${ }^{\circledR}$ RTU via RS-485
- Source 1 Eaton Series G breaker with 310+ electronic trip unit with LSI
- Deadfront compartment for breaker
- Series G breaker with shunt trip
- Separate switch compartment

## Optional Features

- Available surge suppression device for power/controller, engine start circuit, phone and cable connections
- Space heater with thermostat
- Eaton IQ and Power Xpert series metering
- Open in-phase transition, time delay neutral or inphase with a default to time delay neutral transfer
- ATC-300+ and ATC-900 controllers available
- Source 2 inhibit
- Manual retransfer to normal
- Remote annunciator with control
- Ethernet communication (PXG 900 Gateway)
- Breaker with LSIG electronic trip units
- Breaker with Arcflash Reduction Maintenance System

## Commercial Design Highlights

- Integrated service entrance rating listed to UL 1008 100\% rated
- Meets overload, endurance, temperature rise and withstand rating per UL 1008
- Separate ATS and breaker compartment permits safe access to the ATS
- Combined breaker/ATS reduces overall equipment size and installation cost
- Lockable breaker permits safe downstream maintenance
- Breaker with electronic trip units provide adjustable ratings and adjustable curve shaping

## Design Features

## Integrated Service

## Entrance Rating

The service entrance rated contactor design has been tested and listed to UL 1008 as suitable for use as service equipment. In addition, per UL 1008, the switch is rated for $100 \%$ load ratings and eliminates application considerations when applying a $100 \%$ rated ATS with $100 \%$ load ratings.

Separate Compartment for ATS and Breaker
The standard design includes a separate deadfront compartment for the incoming breaker and separate compartment for the ATS. This innovative design provides simplified access to cable entrance areas and can reduce personal protection equipment (PPE) requirements when performing installation or routine maintenance.

Electronic Trip Unit on SE Breaker
The service entrance breaker is an Eaton Series G breaker with the 310+ trip unit that provides adjustable rating and breaker curve shaping. The trip unit comes with either LSI or LSIG curve shaping capability. The long delay and short delay functions enable the breaker curves to be manipulated for upstream and downstream breaker coordination.

## Arcflash Reduction Maintenance System ${ }^{\text {TM }}$

The Eaton 310+ electronic trip units address the National Electrical Code ${ }^{\circledR}$ Section 240.87 for Arc Energy Reduction. These moldedcase circuit breakers provide two approved methods to reduce arc energy: energyreducing maintenance switching with local status indicator and zone selective interlocking.

ATC-300+ Controller
Eaton's ATC-300+ controller offers a full set of programmable time delays, source 2 inhibit and manual retransfer. The controller comes standard with Modbus communications.

ATC-900 Controller
Eaton's new ATC-900 controller brings ease of use, adaptability, supervisory and programming capabilities to mission-critical applications. The 4.3-inch color TFT display provides simple arrow keys for quick screen navigation. Event logging and recording of time-stamped events are viewed easily. Field configuration of I/O allows user adaptability to special requirements.

Multi-Tap Voltage Selector
Allows the transfer switch to be readily applied on most system voltages by connecting to the proper terminals. Available system voltages include 120, 208, $220,240,277$ or 480 Vac, 60 Hz . The non quick connect multi-tap transformer is standard on units up to 400 A and the quick re-connect version is standard on 600-1600 A.

## Lockable Breaker

The upstream service rated breaker includes a doormounted keyed switch that will allow the breaker to be tripped to the OFF position and electrically locked out. The keyed switch has a Normal position and Disconnect position that indicates the breaker has been tripped. Once in the Disconnect position, the key may be removed. In addition there is a ship loose handle hasp that allows the breaker handle to be mechanically locked out.

## Manual Wallmount Transfer Switch

## Molded Case Switches-Manual Wallmount, 30-1000 A

## Description

Eaton's wallmount manually operated transfer switches are designed for a variety of standby power applications for critical loads. In the event of a primary power source interruption, the user can manually transfer the load circuits to the standby power source. Once primary power has been restored, the user can manually transfer the load circuits back to the primary power source.

## Application Description

Manual transfer switches cover applications ranging from 30 to 1000 A through 600 Vac for standard manual configurations and open transition.
Manual transfer switches may be applied for those application where a manually initiated and manually operated transfer is suitable. The front door of the switch must be opened to operate the manual handle. The design comes standard with a deadfront design, allowing safe manual transfer under load. Should an application require a service entrance rating, then a non-automatic or automatic design needs to be selected.

## Features and Benefits

## Features

- Molded case switch power contact assemblies
- Positive mechanical interlocking
- Permanently affixed manual operating handle

## Benefits

- High withstand, totally enclosed for maximum arc suppression and isolation during power transfer
- Optional trip units offer system overcurrent protection
- Prevents the paralleling of two sources of power
- Permits safe and convenient manual transfer of power
- Requires no control power

Note: If a service entrance rating is required, then a non-automatic type switch must be selected. Service entrance ratings are not available on a manual transfer switch.

Non-Automatic Wallmount

## Molded Case Switches-Non-Automatic Wallmount, 30-1000 A

## Product Description

Eaton's wallmount nonautomatic transfer switches are designed for a variety of standby power applications for critical loads.

In the event of a primary power source interruption, the user can manually transfer the load circuits to the standby power source

Non-Automatic Switch with Doors Closed
Note: Optional service entrance rating shown for this photo.

## Application Description

Non-automatic transfer switches cover applications ranging from 30-1000 A through 600 Vac for manual configurations, open transition, standard or service entrance.

Non-automatic transfer switches are manually initiated, but electrically operated designs. Front door-mounted controls allow the operator to initiate the transfer. Overcurrent trips may be added to the design for either or both the normal and emergency source. Service entrance ratings are available. Note that the Eaton service entrance rated non-automatic transfer switch is a $100 \%$ rated and listed to UL 1008 as suitable for use for service entrance.

## Features and Benefits

## Features

- Molded case switch power contact assemblies
- Positive mechanical and electrical interlocking
- Permanently affixed manual operating handle
- Pushbutton operation

## Benefits

- High withstand, totally enclosed for maximum arc suppression and isolation during power transfer
- Optional trip units offer system overcurrent protection
- Prevents the paralleling of two sources of power
- Permits safe and convenient manual transfer of power under load via external pushbutton initiated operation

## Non-Automatic Transfer Switch

Device panel shows controls to initiate the manual transfer and control indicating lights. In addition, an optional service entrance rating may be specified. Keyed switch is mounted on the device panel.

Breaker-Based Designs

## Standards and Certifications

- Complies with UL 1008 and UL 489 standards
- IBC seismic qualified

## Molded Case Switches-Automatic Wallmount, 30-1000 A

## Product Description

Eaton's wallmount transfer switches are designed for a variety of standby power applications for critical loads. They provide flexibility, reliability and value in a compact package. In the event of a primary power source interruption, a transfer switch provides an effective means to transfer the load circuits to an alternate power source while reducing the possibility of injury or property damage.
Wallmount transfer switches meet or exceed all industry standards for endurance, reliability and performance.

These breaker-based designs can be applied with the ATC-100, ATC-300+ or ATC-900 controllers.

## Application Description

Suitable for emergency and standby systems (all loads).

## Features, Benefits and Functions

## Industrial Design Highlights

- Double-throw,
mechanically interlocked transfer mechanism
- High withstand and closing ratings
- Seismic qualified (BOCA®, CBC, IBC, UBC)

## Standard Features

- Auxiliary relay contacts:
- Source 1 present 2NO and 2NC
- Source 2 present 2NO and 2NC
- Switch position indication contacts:
- Source 1 position 1NO and 1NC
- Source 2 position 1NO and 1NC
- Source 1 and Source 2 sensing:
- Undervoltage/ underfrequency
- Overvoltage/ overfrequency
- Three-phase rotation protection
- Three-phase voltage unbalance/loss
- Pretransfer signal contacts 1NO/1NC
- Go to emergency (Source 2)
- Seven field-programmable time delays
- LCD-based display for programming, system diagnostic and Help message display
- Mimic diagram with source available and connected LED indication
- Time-stamped history log
- System TEST pushbutton
- Programmable plant exerciser-OFF, daily, 7-, 14-, 28-day interval selectable run time 0-600 minutes no load/ load with fail-safe
- Safe manual operation under full load with permanently affixed operating handle

## Optional Features

- Suitable for use as service equipment in the standard enclosure size, $100 \%$ rated and listed to UL 1008
- Available SPD for power/ controller, engine start circuit, phone and cable connections
- Integrated distribution panels
- Field-selectable multi-tap transformer panel permits operation on a wide range of system voltages
- Integral overcurrent protection
- Not available on contactor transfer switch
- Space heater with thermostat
- Ammeter-load side
- Stainless steel cover for controller
- ATC-100 and ATC-900 controllers available
- Modbus RTU via RS-485
- Source 2 inhibit
- Manual retransfer to normal
- Remote annunciator with control
- Ethernet communication (PXG 400 Gateway)

Basic Components of Automatic Transfer Switches

## Eaton's Superior Design Transfer Switch Characteristics Unmatched Performance and Versatility

Eaton's family of wallmount transfer switches offers unmatched performance, versatility and value for power switching applications. At the heart of these designs is Eaton's molded case switch, designed specifically to meet UL 1008.

## Superior Main <br> Contact Structure

All Eaton wallmount transfer switches meet or exceed the standards set forth in UL 1008 and UL 489. No other transfer switch manufacturer has met the rigid testing requirements of this combination of standards. Completely enclosed contacts add a measure of safety and reliability. It also ensures the integrity of the contact assemblies and minimizes the need for periodic maintenance of the contacts, reducing downtime.

Fast, Powerful and Safe Power Switching Mechanism
The power panel utilizes a unidirectional gear motor mechanism. The power panel can be operated manually under a FULL LOAD.

Molded Case Switch Features

- True four-pole switched neutral availability
- Totally enclosed contact assembly

Molded Case Switch

## Optional Integral Overcurrent Protection Capability

For service entrance and other applications, trip units can be integrated into the power switching section. This eliminates the need for separate upstream protective devices, saving cost and space.

Optional Thermal-Magnetic or Electronic Trip Units

Optional Service Entrance Rated Automatic Transfer Switch
Eaton's service entrance rated molded case breaker design is a $100 \%$ rated ATS and UL 1008 Listed.

## 5.3

## Transfer Switches

## Mechanical Interlock

Wallmount transfer switches feature a rear-mounted, fail-safe mechanical interlock to prevent paralleling of sources. This is, in addition to software interlocking and the interlocking inherently provided by the transfer mechanism.

Triple Interlocks

## Load Bus Assembly

The load bus can be oriented for either top or bottom access. Top entry is standard.

## Multi-Tap Voltage Selector

Eaton's industry-exclusive Multi-Tap system voltage selector allows our transfer switch to be applied on most system voltages just by proper insertion of the selector plug. Available in two configurations: Worldwide Multi-Tap with 600, 480, 415, 380, 240, 220 and 208 Vac, single- and three-phase, 50 and 60 Hz taps. North American Multi-Tap with 600, 480, 240, 208 and 120 Vac, single- and threephase, 60 Hz taps.

Multi-Tap Voltage Selector

## Ease of Maintenance

Keyed quick-disconnect plugs are provided for easy and complete isolation of the control circuitry.
Maintenance can be performed on the logic independent from the power sections and still allow the user to manually transfer power under full load conditions.

Logic Disconnect Plugs

## North American

## Voltage Selector

North American multi-tap transformer comes with 600, 480, 240, 208 and 120 Vac, single- and three-phase, and 60 Hz taps, which are all field selectable. Simply remove the steel cover and move the appropriate blue flag terminal to the desired voltage. All switches are shipped with the blue flag in the 600 V position.

Transformer Panel Opened

Typical (225-1000 A) Vertical Design Transfer Switch Equipment

Shown Without the Deadfront

## Standards and Certifications

They are listed under
Underwriters Laboratories UL 1008 Standard for transfer switch equipment and are optionally available as suitable for emergency and standby systems as defined in NFPA 99 for healthcare facilities.

- UL 1008 listed
- CSA C22.2 No. 178 certified

## Catalog Number Selection

Molded Case Transfer Switch

Notes
(1) HFD $=200$ and $225 \mathrm{~A}, \mathrm{HLD}=600 \mathrm{~A}, \mathrm{HMD}=800 \mathrm{~A}$ for $240 / 120$ Vac single-phase, three-wire and 208Y/120 Vac three-phase, four-wire systems only.
(2) Four-pole 600 A will use an NB breaker.
(3) $\mathrm{MCB}=$ Molded Case Breaker, MCS = Molded Case Switch.

## Technical Data and Specifications

## Electrical Ratings

- Molded case and circuit breaker 30-1000 A
- Two-, three- or four-pole
- Up to $600 \mathrm{Vac}, 50 / 60 \mathrm{~Hz}$
- NEMA 1, 3R, 4X, 12, open

## Maintenance Bypass Switches-Type MBHE 100-1000 A

## Product Description

Eaton's maintenance bypass switch is a UL 1008-listed device that provides a simple and effective means for bypassing un-interruptible power supplies while maintaining continuity of power to the critical computer loads. A maintenance bypass switch is a requirement on every UPS installation in order to accommodate the maintenance and testing of the UPS system.

## Features and Benefits

- Make-before-break electrical operation
- Lockout circuit to be wired into the UPS bypass authorization
- Pilot devices to show UPS position "Normal" and "Bypassed"
- Pilot device to show "Lockout" enabled
- Reliable manually initiated electrical operation
- High interrupting ratings are standard
- Molded case switch designs are available
- Solid neutral connections are standard
- Safe and reliable operation is ensured due to the simple and durable switching design
- Unauthorized bypass is prevented by the need of UPS system to send the bypass authorized signal
- 100\% current ratings makes selection to the UPS kVA ratings easy to accomplish
- Use of interrupting rating switches makes the maintenance bypass switches adaptable to systems with high levels of available fault current

## Standards and Certifications

- UL 1008 listingFile E61639

## Technical Data and Specifications

Maintenance Bypass Switch

Standard Withstand, Closing and Interrupting Ratings (1)

| Transfer Switch Ampere Rating | Rating When Used with Upstream Circuit Breaker |  |  | Rating When Used with Upstream Fuse |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Suggested Breaker Rating (2) | 240 V | 480 V | Maximum Fuse Rating | Fuse Type | 480 V |
| 100 | 100 | 100 | 65 | 200 | J, T | 200 |
| 150 | 150 | 100 | 65 | 400 | J, T | 200 |
| 225 | 225 | 100 | 65 | 400 | J, T | 200 |
| 300 | 300 | 100 | 65 | 400 | J, T ${ }^{3}$ | 200 |
| 400 | 400 | 65 | 35 | 600 | J, T | 200 |
| 600 | 600 | 65 | 50 (4) | 800/1200 | J, T | 100/200 |
| 800 | 800 | 65 | 50 (4) | 1200/1600 | L | 100/200 |
| 1000 | 1000 | 65 | $50{ }^{4}$ | 1600 | L | 200 |

## Notes

(1) Tested in accordance with UL 1008.
(2) For maximum breaker rating in circuits where the transfer switch is evaluated as a "motor branch circuit conductor" refer to the NEC Section 430.25 for sizing.
(3) Also can use Class RK5 fuse with 100 kA rating.
(4) Four-pole units rated 35 kA .

To attain the maximum rating shown in the chart, when protected by an upstream breaker, the upstream device must have an equivalent interrupting rating.

## Automatic Transfer

## Open Transition

Open transition type Magnum
transfer switches use the
Eaton programmable ATC-900
microprocessor-based
logic controller.

## Automatic Transfer

 Closed TransitionClosed transition applications
feature the ATC-900 closed
transition logic controller.

Magnum-Based Design

## Features, Benefits and Functions

## Industrial Design Highlights

- Freestanding enclosure
- High withstand ratings
- 100 kA standard 3-cycle rating
- 85 kA standard 30-cycle rating
- Dual drawout on ATS and bypass
- Deadfront
- Safe manual transfer under load
- Electrically operated
- Magnum stored energy mechanism
- Quick make / quick break-switching times (<3 cycles)
- Multi-tap transformer
- True four-pole switched neutral
- Mechanically interlocked
- Integral overcurrent trip option
- Integrated service entrance rating option 100\% rated per UL 1008
- OSHPD listed

## Standard Features

- ATC-900 controller
- Drawout cassette on ATS and bypass
- Source available contacts:
- Source 1 available 1NO/1NC
- Source 2 available 1NO/1NC
- Switch position contacts:
- Source 1 position 1NO/1NC
- Source 2 position 1NO/1NC
- Source 1 and Source 2 sensing:
- Undervoltage/ underfrequency
- Overvoltage/ overfrequency
- Field-programmable time delays
- Time delay engine start
- Time delay normal to emergency
- Time emergency to normal
- Time delay engine cooldown
- Time delay emergency failure
- LCD color-based display for programming, system diagnostics and Help menu
- Mimic diagram with source available and connected LED indication
- Four programmable inputs and outputs
- Standard Modbus 485
- USB port for set point downloads and event recording uploads
- Password-protected access to control functions and set point programming
- Two automatic plant exercisers-load or no load, daily, 7-, 14-, 28-day or calendar date operation, 0-600 minute runtime

## Optional Features

- Available UL 1449 Third Edition surge protection device (SPD)
- Automatic transfer operation with selectable (via programming) nonautomatic or automatic retransfer with fail-safe
- Space heater with thermostat
- Digital multi-function power quality metering
- DC power input for uninterrupted monitoring of ATS status
- Integrated load metering
- Expandable I/O (up to 20 I/O total)
- EtherNet TCP/IP communications
- Integrated service entrance option with 100\% rated per UL 1008
- Optional remote annunciator

## Unmatched Performance and Versatility

The Eaton family of Magnum transfer switches offers unmatched performance, versatility and value for standby power applications. At the heart of these designs is the Magnum switch with the following features:

## Superior Main

## Contact Structure

All Eaton Magnum Transfer Switches meet or exceed the standards set forth in UL 1008 and UL 489 with high withstand, totally enclosed Magnum switches. No other transfer switch manufacturer has met the rigid testing requirements of this combination of standards. Completely enclosed contacts add a measure of safety and reliability. They also ensure the integrity of the contact assemblies and minimize the need for periodic maintenance of the contacts, reducing downtime and maintenance time.

## Fast, Powerful and Safe

 Switching MechanismThe mechanism uses a high speed less than or equal to a 3-cycle stored energy switching mechanism. This mechanism can be operated manually under a FULL LOAD.

## Ease of Coordination and Application-

## Short-Time Withstand

The use of electronic trips has allowed performance curve shaping to facilitate proper system coordination. The most significant is the "short time" rated trip unit.

These trip settings may be set for what are considered extremely high currents for much longer durations than the three-cycle withstand test required under UL 1008. To facilitate improved coordination, Eaton Magnum transfer switches have been tested and are provided with 30-cycle, extended withstand ratings.

## Optional Integral Overcurrent Protection Capability

Optional Digitrip™ Magnum Trip Unit

## UL 1008 100\% Rated Service Entrance

For service entrance and other applications, Digitrip solid-state trip units can be integrated into the power switching section. This eliminates the need for separate upstream protective devices, saving cost and space. Available with various combinations of long, short time, instantaneous, ground fault protection and communication. Overcurrent trip selection can be made from the series of Eaton Digitrip RMS trip units including the standard Digitrip 520 or optional 520 M , 520 MC or 1150.

## Controller Logic

The ATC-900 Automatic Transfer Switch Controller from Eaton is a comprehensive, multifunction, microprocessorbased automatic transfer switch controller and meter. It is designed to accurately monitor power sources and provide the necessary intelligence to reliably operate a transfer switch through a series of programmed sensing and timing functions.
The ATC-900 provides an unmatched degree of programming flexibility to address the needs of any system.

## Controller Primary <br> \section*{Functions}

The ATC-900 Automatic Transfer Switch Controller offers these standard features:

- Monitor normal and emergency source voltages and frequencies
- Provide transfer and re-transfer control signals
- Provide engine/generator starting and shutdown signals
- Permit customer programming of operational set points
- Display real-time and historical information
- Permit system testing
- Store customer and factory-established parameters in nonvolatile memory
- Provide faceplate source status indication
- Provides an LCD-based display for programming and status readout

## Controller Flexible

## Configurations

The ATC-900 controller includes four programmable inputs and outputs as a standard offering. The inputs and outputs can be assigned functions from a preset list of options, either at the factory or in the field. Additional I/O can be added at any time by adding an external I/O module. Each I/O module contains four inputs and outputs, and up to four modules can be daisy chained to the ATC-900 controller.

## Controller Diagnostics and Troubleshooting

Eaton's ATC-900 controller provides users with data required to quickly identify the root cause of a backup power system failure and minimize system downtime. With the DCT module, the ATC-900 stores 4 seconds of metered data every 20 msec for certain events. The data is captured 2 seconds before and 2 seconds after the event (except for a power failure, which is 4 seconds before). Oscillographic data for 10 events is stored in the controller and may be downloaded over USB or displayed graphically.

## Controller Communications

Every ATC-900 controller includes a standard Modbus RTU communications interface with an option to upgrade to Modbus TCP/IP.
The ATC-900 is also compatible with Eaton's Power Xpert Gateway for web-based monitoring, Modbus TCP/IP, SNMP or BACnet $® / / \mathrm{P}$. The Power Xpert Gateway can be used to consolidate data from up to 64 devices, including communications ready transfer switch controllers, trip units and meters, as well as other Eaton devices.
Versions of the Power Xpert Gateway include email event notification and data-logging functionality.

## Magnum Fixed Mount Transfer Switch

2000 A, Four-Pole, NEMA 1 Enclosed, Through-the-Door Design

2000 A Three-Pole Fixed Design NEMA Behind-the-Door Enclosure

Eaton's drawout Magnum switch should be considered for any systems requiring either greater redundancy, easier maintainability, or where true selective coordination is desired.
Eaton's drawout Magnum switch provides the capability to isolate either of the two power sources (Source 1 or Source 2) and its associated logic while maintaining power to the load.

Each switching section is independent and can be replaced either with a spare switch, or for less critical replacement needs, a replacement unit is available from the factory.

## Ease of Maintenance

Keyed quick-disconnect plugs are provided for easy and complete isolation of the control circuitry.

Maintenance can be performed on the logic independent from the power sections and still allow the user to manually transfer power under full load conditions.

Logic Disconnect Plugs

## Deadfronts

The Magnum transfer switch comes standard with two deadfront panels mounted over the Magnum power case switch or breaker. These deadfronts provide additional protection isolation from any power connections. The power connections for Source 1, Source 2 and Load connections are all in the back compartment of the transfer switch.

## Interlocking for Open

 Transition ApplicationsThe open transition type Magnum transfer switches feature both mechanical (cable) and electrical interlocking to prevent paralleling of sources.

Multi-Tap Voltage Selector
Allows the transfer switch to be readily applied on most system voltages worldwide by connecting to the proper terminals. Available system voltages include 120, 208, 220, 230, 240, 380, 401, 415, 480 , or $600 \mathrm{Vac}, 50$ or 60 Hz .

## Product Selection

Eaton transfer switch equipment offers flexibility and versatility to the system designer and user. All switches include the basic features necessary for normal operation as standard. Eaton also offers an extensive array of optional features/ accessories that allows the user to customize a new transfer switch to match the application. Select the appropriate catalog number for the application. Then choose any optional features/accessories needed to complete the project requirements.

## Catalog Number:

 ATV9MGB33200XRU with Optional Features 16B and 37BThe example above would specify the following:

- Automatic transfer switch
- Vertical configuration
- ATC-900 logic
- Magnum DS frame
- Fixed mount
- Three-pole
- 3200 A
- 480 V
- NEMA 1 enclosure
- UL listed
- ATC-900 transfer logic
- Integral overcurrent protection both sources
- Service entrance rated with ground fault protection if
was selected
- Seismic qualified

## Catalog Number Selection

Using the catalog numbering system provides an overview of the ten basic style/feature categories that generate the 15 -digit catalog number.

Magnum Automatic and Non-Automatic Transfer Switches 200-5000 A

## Notes

(1) 4000 A and 5000 A available as drawout configuration only.
${ }^{2}$ Available on fixed-mounted units up to 3200 A .

Magnum-Based Designs

## Standards and Certifications

Eaton Magnum transfer switches meet or exceed all industry standards for endurance, reliability and performance. They are listed under Underwriters Laboratories UL 1008 Standard for transfer switch equipment. With certain options, they also comply with Source 2 and standby system requirements as defined in NFPA 99 for healthcare facilities.

- UL 1008—standard for safety for automatic transfer switches up to 4000 A; 5000 A available as UL 891 only
- UL 489-standard for circuit breakers and molded case switches
- CSA 22.2-178—Canadian transfer switch standard
- NEC Articles-code sections 517, 700, 701, 702-applicable switch equipment
- NFPA 110-Source 2 and Standby Power Systems
- NFPA 99—healthcare facilities
- EGSA 100S—standard for transfer switches
- NEMA ICS10-Standard for transfer switch equipment
- UBC-Uniform Building Code for Seismic Zone 4
- ISO® 9000-International Organization for Standardization
- CBC-California Building Code
- IBC-International Building Code
- BOCA—Building Officials Code Administrators

## Technical Data and Specifications

## Floor-Standing Magnum Transfer Switch

- Ambient temperature range: $-40^{\circ} \mathrm{C}$ to $40^{\circ} \mathrm{C}$ ( $-40^{\circ} \mathrm{F}$ to $104^{\circ} \mathrm{F}$ )
- Operating temperature range: $-20^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$ ( $-4^{\circ} \mathrm{F}$ to $158^{\circ} \mathrm{F}$ )
- Operating humidity: up to $90 \%$
- Relative humidity (noncondensing)

## Magnum Drawout Transfer Switch

- 200-5000 A
- Two-, three-, four-pole (except 4000 A: threeand four-pole only)
- 120-600 Vac
- 100,000 A withstand/ closing/interrupting at 480 Vac
- Short-time withstand85,000 for 30 cycles

## Magnum Fixed-Mount

## Transfer Switch

- 200-3200 A
- Two-, three-, four-pole (except 3200 A: two- and three-pole only)
- 120-600 Vac
- 100,000 A withstand/ closing/interrupting at 3 cycle
- Short-time withstand85,000 for 30 cycles

## Magnum Drawout Transfer Switches <br> Automatic and <br> Non-Automatic <br> Transfer Switches

Enclosures meet all current applicable NEMA and UL standards for conduit entry, cable bending, gutter space and shielding of live components.
NEMA 1 and
NEMA 3R Enclosures
Magnum transfer switches are supplied with a front door only. The NEMA 3R are provided with a door within a door design.

The Magnum transfer switch requires rear access. If placed against a wall, then a minimum of 3 feet is needed as well as side access on at least one of the sides. Access to cable space can be via the side, bottom, top or rear.

Optional Service Entrance Rated Automatic Transfer Switch
Eaton's service entrance rated power case breaker design is a $100 \%$ rated ATS and UL 1008 Listed up to 4000 A .

Notes
(1) Seismic mounting adds 3.00 inches $(76.2 \mathrm{~mm})$ width to each side or additional 6.00 inches ( 152.4 mm ) to width.
(2) Consult factory.

## SP = Shipping Split.

Consult factory for dimensions.
Note: The typical Magnum ATS at 4000 and 5000 A ratings will include one cubicle with the Source 1 and Source 2 power case switches or breakers. A second cubicle called a wireway is required unless bus is used for the connections per Connection Type table above. Cable connections to the wireway cubicle can be made from the top or bottom. The wireway cubicle will have removable panels on the front, and cable connections may be made from the top or the bottom. Cable connections to the power case switch or breaker cubicle are made from the back. Consult factory for dimensions. The wireway width is 32.00 inches ( 812.8 mm ).

## Bypass Isolation Transfer Switch, 200-5000 A

## Product Description

A bypass isolation switch utilizes loadbreak isolation and bypass transfer power contacts. Thus, should voltage be lost on the line to which the ATS is connected, and should a manual bypass be required to the other line, this can be accomplished safely and quickly as described below. With contactor designs utilizing non-loadbreak isolation and bypass switches, manual bypass to the other line is hindered by mechanical or electrical safety interlocking.

## Application Description

The bypass isolation switch is designed for applications where maintenance, inspection and testing must be performed while maintaining continuous power to the load. This is typically required in critical life-support systems and standby power situations calling for safe system maintenance with no power disruptions. Such a design allows for the quick removal of the different switching devices for inspection, maintenance or replacement.

## Features, Benefits and Functions

Eaton's transfer switch is a rugged, compact design utilizing Magnum power switches or Magnum power circuit breakers to transfer essential loads from one power source to another. Open transition switching devices are interlocked to prevent both switching devices from being closed at the same time. The versatile design, in addition to standard transfer functions, offers an optional integral thermal and short-circuit protection in either or both switching devices.

The switching devices are in a compact vertical arrangement. The logic can be easily disconnected from the switching device without disturbing critical connections. The enclosure is free standing, and by using the specially supplied cleats, the switch is seismic approved (Option 42). The terminals are mounted in the rear of the switch, permitting rear, top, bottom or side cable or bus bar entrance.

The switching devices have a high withstand rating. The high-speed, stored-energy switching mechanism guarantees a transfer time of less than three cycles.

- Reliable microprocessor logic
- Designed to safely withstand fault currents
- Eliminates need for complex interlocks
- Most versatile bypass isolation transfer switch available
- Eaton drawout cassette design
- Overcurrent protection available
- No loadbreak when bypassing to the same source
- Drawout capabilities on both ATS and bypass portions
- Compact design
- Ability to test power switching elements during drawout process
- Power switching devices completely interchangeable between ATS and bypass portions

Magnum Bypass Isolation Front View without the Deadfront Panels-NEMA 1 Through the Door

Front Access Option 54 A is Available on All Magnum Designs

## Standards and Certifications

Eaton transfer switch equipment is listed for application by UL and CSA. In addition, Eaton ATSs are listed in File E38116 by Underwriters Laboratories under Standard UL 1008. This standard covers requirements for ATSs intended for use in ordinary locations to provide for lighting and power as follows:
A. In emergency systems, in accordance with Articles 517 and 700 in the National Electrical Code (NEC), American National Standards Institute/National Fire Protection Association (ANSI/NFPA) 70 and the NFPA No. 76A and/or
B. In standby systems, in accordance with Article 702 of the NEC and/or
C. In legally required standby systems in accordance with Article 701 of the NEC. Eaton ATSs are available to meet NFPA 110 for emergency and standby power systems, and NFPA 99 for healthcare facilities when ordered with the appropriate options. Since Eaton ATSs utilize specially designed switches and/or switching devices as the main power switching contacts, these devices must also be listed under the additional UL Standard 1066. UL utilizes two basic types of listing programs:
a. Label Service, and
b. Re-examination. UL 1066 employs a label service listing program that requires an extensive follow-up testing program for listed devices. Standard UL 1008 for ATSs lists devices under the reexamination program that only requires a continual physical reexamination of the components used in the product to ensure consistency with the originally submitted device. Follow-up testing IS NOT required by UL 1008. Representative production samples of switches and switching devices used in Eaton ATSs are subjected to a complete test program identical to the originally submitted devices on an ongoing periodic basis per UL 1066. The frequency of such a resubmittal can be as often as every quarter for a low ampere device.

Note: IBC seismic qualified.

## Catalog Number Selection

Using the catalog numbering system provides an overview of the ten basic style/feature categories that generate the 15 -digit catalog number.

Magnum Bypass, Transfer Switches 200-5000 A

5

## Product Selection

Eaton transfer switch equipment offers flexibility and versatility to the system designer and user. All switches include the basic features necessary for normal operation as standard. Eaton also offers an extensive array of optional features/ accessories that allows the user to customize a new transfer switch to match the application. Select the appropriate catalog number for the application. Then choose any optional features/accessories needed to complete the project requirements.

## Catalog Number:

 BIV9MGE33200XRUThe example above would specify the following:

- Bypass isolation
- Vertical configuration
- ATC-900 controller
- Magnum DS frame
- Power case switch normal and emergency
- Drawout
- Three-pole
- 3200 A
- 480 V
- NEMA 3R enclosure
- UL listed

ATC-100 Controller

## ATC-100 Controller

## Product Description

The ATC-100 Controller is a comprehensive, multifunction, microprocessor-based ATS controller. It is a compact, self-contained, panelmounted device designed to replace traditional relay and solid-state logic panels.

## Application Description

The ATC-100 Controller provides both fixed and jumper-selectable settings to allow for a range of applications. It operates from all system voltages between 120 and 480 Vac , singlephase and three-phase, at 50 or 60 Hz . In addition, a period of no control power operation is provided. The ATC-100 Controller monitors the condition of the three-phase line-to-line voltage and frequency of both the utility and generator power sources. It can also be set up for single-phase operation. The ATC-100 controller provides the necessary intelligence to ensure that the transfer switch operates properly through a series of sensing and timing functions.

The ATC-100 controller can be used with both the breaker-based design and the contactor-based design up to 400 A single- or threephase. The ATC-100 controller is designed for residential or light commercial applications. If an application is defined as an Emergency or Legally required system, then Eaton recommends that an ATC-300+ or ATC-900 controller be used. See Page V2-T5-71 for ranges and factory settings.

## Features, Benefits and Functions

## Standard Features

- Auxiliary relay contacts:
- Source 1 present 2NO and 2NC
- Source 2 present 2 NO and 2 NC
- Switch position indication contacts:
- Source 1 position 1NO and 1NC
- Source 2 position 1NO and 1NC
- Source 1 and Source 2 sensing:
- Undervoltage/under frequency
- Overvoltage/over frequency
- Controller settings via jumpers located at the rear of the unit
- Mimic diagram with source available and connected LED indication
- System TEST pushbutton
- Selectable-OFF, daily, 7-, 14-, 28-day interval fixed run time 15 minutes no load/load with fail-safe
- Monitor utility and generator power source voltages and generator power source frequency
- Provide undervoltage protection of the utility and generator power sources
- Provide underfrequency and overfrequency protection of the utility and generator power source
- Permit easy customer setup
- Permit system testing
- Provide faceplate source status indications

## Standards and Certifications

- UL listed component
- IEC 61000-4-2, 61000-4-3, 61000-4-4, 61000-4-5, 61000-4-6, 61000-4-11
- CISPR 11, Class B
- FCC Part 15, Class B

## Technical Data and Specifications

ATC-100 Controller Specifications

| Description | Specification |
| :---: | :---: |
| Input control voltage | 95 to $145 \mathrm{Vac} 50 / 60 \mathrm{~Hz}$ |
| Voltage measurements of | Utility $\mathrm{V}_{\mathrm{AB}}$ Generator $\mathrm{V}_{\mathrm{AB}}$ Utility $V_{B C}$ Generator $V_{B C}$ Utility $\mathrm{V}_{\mathrm{CA}}$ Generator $\mathrm{V}_{\mathrm{CA}}$ |
| Voltage measurement range | 0 to 575 Vac rms ( $50 / 60 \mathrm{~Hz}$ ) |
| Voltage measurement accuracy | $\pm 1 \%$ of full scale |
| Frequency measurements of | Generator |
| Frequency measurement range | 40 Hz to 70 Hz |
| Frequency measurement accuracy | $\pm 0.3 \mathrm{~Hz}$ over the measurement range |
| Operating temperature range | $-20^{\circ}$ to $+70^{\circ} \mathrm{C}\left(-4^{\circ}\right.$ to $\left.+158^{\circ} \mathrm{F}\right)$ |
| Storage temperature range | $-0^{\circ}$ to $+85^{\circ} \mathrm{C}\left(-22^{\circ}\right.$ to $\left.+185^{\circ} \mathrm{F}\right)$ |
| Operating humidity | 0 to $95 \%$ relative humidity (noncondensing) |
| Operating environment | Resistant to ammonia, methane, nitrogen, hydrogen and hydrocarbons |
| Generator start relay | 5A, 1/6 hp @ 250 Vac <br> 5 A at 30 Vdc with a 150 W maximum load |
| K1, K2 relays | 10 A, 1-3 hp @ 250 Vac $10 \mathrm{~A} @ 30 \mathrm{Vdc}$ |
| Enclosure compatibility | NEMA 1, NEMA 3R and NEMA 12 UV-resistant ATC-100 faceplate |

## ATC-300+ Controller

## Product Description

Transfer switches are equipped with the high-performance ATC-300+ digital transfer controller, receive rock-solid monitoring, status reporting and transfer control operation. Its superior design and robust construction make the ATC-300+ the industry benchmark for critical and distributed power systems.

## Application Description

Eaton's ATC-300+ ControllerBased Automatic Transfer Switch is designed to provide unmatched performance, reliability and versatility for critical standby power applications.

## Features, Benefits and Functions

## Standard Features

- Auxiliary relay contacts:
- Source 1 present 2NO and 2NC
- Source 2 present 2 NO and 2 NC
- Switch position indication contacts:
- Source 1 position 1NO and 1NC
- Source 2 position 1 NO and 1NC
- Source 1 and Source 2 sensing:
- Undervoltage/ underfrequency
- Overvoltage/ overfrequency
- Three-phase rotation protection
- Three-phase voltage unbalance
- Pretransfer signal contacts 1NO/1NC
- Go to emergency (Source 2)
- Seven field-programmable time delays
- LCD-based display for programming, system diagnostic and Help message display
- Mimic diagram with source available and connected LED indication
- Time-stamped history log
- System TEST pushbutton
- Programmable plant exerciser-OFF, daily, 7-, 14-, 28-day interval selectable run time 0-600 minutes no load/ load with fail-safe

## Optional Features

- Suitable for use as service equipment in the standard enclosure size when used with breaker-based design transfer switches
- Available UL 1449 3rd Edition compliant surge protection devices
- Integrated distribution panels
- Field-selectable multi-tap transformer panel permits operation on a wide range of system voltages
- Integral overcurrent protection available when used with breaker-based design transfer switches
- Space heater with thermostat
- Ammeter-load side
- Power quality metering
- Stainless steel cover for controller
- Manual retransfer from emergency to normal
- Communication via Modbus RTU—metering data, engine test, set point management system status
- Load shed/emergency inhibit
- Remote annunciator available

## Standards and Certifications

- UL listed component
- Meets intent of UL 991, 1008
- Meets IEC 1000-4-2, 1000-4-3, 1000-4-4, 1000-4-5, 1000-4-6, 1000-4-11
- Meets CISPR 11, Class A
- Complies with FCC Part 15, Class A
(나)

## Technical Data and Specifications

| ATC-300+ Controller Specifications |  |  |

## Primary Functions

The ATC-900 Automatic Transfer Switch Controller offers these standard features:

- Monitor normal and emergency source voltages and frequencies
- Provide transfer and retransfer control signals
- Provide engine/generator start and shutdown signals
- Permit user programming of operational set points
- Display real-time and historical information
- Permit system testing
- Store customer and factory established parameters in nonvolatile memory
- Provide faceplate source status indication
- Provide an LCD for programming and status readouts

## Features and Benefits

- LCD screen for system status, programming, system diagnostics, help, and troubleshooting
- Event logging and recording, 450 time stamped events
- 0-600 V field programmable system voltage flexible configuration with assignable inputs and outputs
- Three-source ATS control-master and slave controller functionality
- Selective, automatic load shedding
- Industry standard communication protocols—Modbus RTU and/or Modbus TCP/IP communications interface
- USB drive for uploading and downloading of event data
- USB drive for uploading and downloading programmed set points

| USB port for set point configuration and event-recording downloads | $\square$ |
| Event History |  |
| 320 time-stamped events | $\square$ |
| 2 seconds of metered data stored before and after a transfer event | Optional |

## Automatic Transfer Controllers

## ATC-900 Programmable Set Points

The table below lists only controller features; switch features are not listed, as they are defined by switch construction. Transition settings are specific to the transfer switch construction.

Features and Set Points

| Option Number | Description | Range | Factory Default |
| :---: | :---: | :---: | :---: |
| General Settings |  |  |  |
| - | Set new password | 0000-9999 | 0900 |
| - | Selected language | English, French or Spanish | English |
| - | Nominal frequency | 50 or 60 Hz | As ordered |
| - | Nominal voltage | 110-600 V | As ordered |
| - | Number of phases | 1 or 3 | As ordered |
| - | Number of generators | 0,1 or 2 | 1 |
| - | Preferred source | Source 1 or Source 2 | Source 1 |
| - | PT ratio | 2:1-500:1 | As ordered |
| - | CT ratio | 200-5000 | - |
| - | Daylight saving time | On or Off | 1 |
| - | Operating mode | Stand-alone/master or slave | Master |
| - | Phase sequence check | ABC, CBA or Off | Off |
| - | Commitment to transfer in TDNE | Yes or no | No |
| - | Manual retransfer | Auto, manual or external | As ordered |
| - | Modbus address | 1-247 | 1 |
| - | Modbus baud rate | $0=9600,1$, even | 9600 |
|  |  | $1=9600,1$, odd | - |
|  |  | $2=9600,2$, none | - |
|  |  | $3=9600,1$, none | - |
|  |  | $4=19,200,1$, even | - |
|  |  | $5=19,200,1$, odd | - |
|  |  | $6=19,200,2$, none | - |
|  |  | $7=19,200,1$, none | - |
| Transition Settings |  |  |  |
| 47 | Closed transition |  |  |
|  | Closed transition On or Off | On or Off | As ordered |
|  | Closed voltage difference | 1-5\% | 2\% |
|  | Closed frequency difference | $0.0-0.3 \mathrm{~Hz}$ | 0.3 |
| 32f/32d | Open-in-phase transition |  |  |
|  | In-phase-On or Off | Disable, in-phase default to alarm, in-phase default to open transition | As ordered |
|  | In-phase frequency difference | $0.0-3.0 \mathrm{~Hz}$ | 1.0 |
| - | Synchronization timer | 1-60 minutes | 5 |
| 32a/32d | Open-delayed transition |  |  |
|  | Time delay neutral | 0-120 seconds | 0 |
|  | Load voltage decay | 2-30\% of nominal voltage | 6\% |
| Time Delays |  |  |  |
| 1a | Time delay normal to emergency | 0-9999 seconds | 0:00 |
| 3 a | Time delay emergency to normal | 0-9999 seconds | 5:00 |
| 35 A | Time delay pre-transfer | 0-120 seconds | 0:01 |
| 35 C | Time delay post-transfer | 0-120 seconds | 0:10 |
| 2 A | Time delay engine 1 start | 0-120 seconds | 0:03 |
| - | Time delay engine 2 start | 0-120 seconds | 0:03 |
| 4A | Time delay engine cool-off | 0-9999 seconds | 5:00 |
| 7 A | Time delay engine fail timer | 0-6 seconds | 0:06 |
| - | Voltage unbalance time delay | 10-30 seconds | 0:30 |

## Automatic Transfer Controllers

Features and Set Points, continued

| Option Number | Description | Range | Factory Default |
| :---: | :---: | :---: | :---: |
| Source Settings |  |  |  |
| 26P | Source 1 undervoltage dropout | 70-97\% of nominal | 80\% |
|  | Source 1 undervoltage pickup | (dropout $+2 \%$ ) to 99\% of nominal | 90\% |
| 5 P | Source 2 undervoltage dropout | 70-97\% of nominal | 80\% |

| 26K | Source 1 overvoltage dropout | 105-120\% of nominal ( $0=$ disabled) | 115\% |
|  | Source 1 overvoltage pickup | 103\% of nominal to (dropout $-2 \%$ ) ( $0=$ disabled) | 105\% |
| 5K | Source 2 overvoltage dropout | 105-120\% of nominal ( $0=$ disabled) | 115\% |
|  | Source 2 overvoltage pickup | 103\% of nominal to (dropout $-2 \%$ ) ( $0=$ disabled) | 105\% |
| 26 J | Source 1 underfrequency dropout | 90-97\% of nominal ( $0=$ disabled) | 94\% |
|  | Source 1 underfrequency pickup | (dropout + 1 Hz) to 99\% of nominal ( $0=$ disabled) | 96\% |
| 5 J | Source 2 underfrequency dropout | 90-97\% of nominal ( $0=$ disabled) | 94\% |
|  | Source 2 underfrequency pickup | (dropout + 1 Hz ) to 99\% of nominal ( $0=$ disabled) | 96\% |
| 26 N | Source 1 overfrequency dropout | 103-110\% (0 = disabled) | 106\% |
|  | Source 1 overfrequency pickup | 101\% to (dropout -1 Hz) (0 = disabled) | 104\% |
| 5 N | Source 2 overfrequency dropout | 103-110\% (0 = disabled) | 106\% |
|  | Source 2 overfrequency pickup | 101\% to (dropout -1 Hz) (0 = disabled) | 104\% |
| 26L | Source 1 percent for unbalanced voltage dropout | 5-20\% of phase-to-phase voltage unbalance ( $0=$ disabled) | 12\% |
|  | Source 1 percent for unbalanced voltage pickup | $3 \%$ to (dropout $-2 \%$ ) (0 = disabled) | 10\% |
| 5L | Source 2 percent for unbalanced voltage dropout | 5-20\% of phase-to-phase voltage unbalance (0 = disabled) | 12\% |
|  | Source 2 percent for unbalanced voltage pickup | $3 \%$ to (dropout $-2 \%$ ) (0 = disabled) | 10\% |
| Engine Test/Plant Exerciser (PE1 and PE2 are independently programmable) |  |  |  |
| 6B | Engine test pushbutton on panel |  |  |
|  | Test mode | No load, load transfer, disabled | Load transfer |
|  | Engine run test time | 0-600 minutes | Load transfer |
| 23M | PE time delay normal to emergency | 0-9999 seconds | 1 minute |
|  | PE time delay emergency to normal | 0-9999 seconds | 1 minute |
|  | PE time delay engine cooldown | 0-9999 seconds | 5 minutes |
|  | PE1/PE2 test mode | No load, load transfer, disabled | Disabled |
|  | PE1/PE2 run time | 0-600 minutes | 30 minutes |
|  | PE1/PE2 schedule | Off, daily, 7-day, 14-day, 28-day or calendar date (up to 12 user-specified dates) | 30 minutes |
|  | PE1/PE2 calendar date | Month: 1-12; Day: 1-31 | 30 minutes |
|  | PE1/PE2 day of week | 1 Sunday, 2 Monday, 3 Tuesday, 4 Wednesday, 5 Thursday, 6 Friday or 7 Saturday | 30 minutes |
|  | PE1/PE2 plant start time | HH:MM AM/PM | 30 minutes |
| Accessory I/O |  |  |  |
| - | Accessory I/O modules | 0-4 | - |

## Flexible Configuration

Designed for scalability, the ATC-900 can be configured for a wide variety of applications. A mix-and-match approach to features allows the user to build a transfer switch controller that meets the precise application needs.
The ATC-900 controller includes four user configurable inputs and outputs. The inputs and outputs can be assigned functions from a predefined list of options either at the factory or in the field.

- Inputs
- Monitor mode
- Bypass timers
- Lockout
- Manual retransfer On or Off
- Manual retransfer

- Emergency inhibit on
- ATS on bypass

Additional I/O can be added at any time by adding an external I/O module. Each I/O module contains four inputs and outputs and up to four modules can be daisy chained to the ATC-900 controller.

I/O Module—The ATC-900 optional I/O module provides users with four module provides users with four
additional assignable inputs and outputs. Up to four I/O modules can be added to an ATC-900 controller providing a total of 20 inputs and outputs.

## Automatic Transfer Controllers

## ATC-900 Metering

ATC-900 Main Screen Shows Current Values

The DCT module incorporates a current transformer interface to the ATC-900, allowing current to be metered along with voltage and frequency. Combined with the ATC-900, the DCT module serves as a multifunction power meter and provides measurement of the listed electrical parameters. Readings are displayed on the ATC-900 controller display or can be monitored through Modbus 485.

DCT Module Attached

| Metering Units | Accuracy | Notes |
| :---: | :---: | :---: |
| Current |  |  |
| IA, IB, IC Amps | $\pm 1 \%$ of reading | Accuracy range 5-100\% |
| Voltage |  |  |
| VAB, VBC, Volts VCA | $\pm 1 \%$ of reading | Applicable to volt range of 34-721 Vac |
| Frequency |  |  |
| Frequency Hz | $\pm 0.2 \mathrm{~Hz}$ of reading | Range is $20-255 \mathrm{~Hz}$ |

Range: universal, auto-ranging up to $416 \mathrm{Vac} \mathrm{L}-\mathrm{N}, 721 \mathrm{Vac} \mathrm{L}-\mathrm{L}$
Supported hookups: 3-element wye or delta
Input impedance: 2 m ohm/phase
Burden: $0.0022 \mathrm{VA} /$ phase at 120 V
Fault withstand: meets IEEE C37.90.1

## Current Inputs

5 A nominal, 10 A maximum
Burden: 0.005 VA per phase maximum at 11 A
Pickup current: 0.1\% of nomina
Connections: screw terminals
Maximum input wire gauge: AWG \#12/2.5 mm²
Fault withstand: $100 \mathrm{~A} / 10$ seconds, $300 \mathrm{~A} / 3$ seconds, $500 \mathrm{~A} / 1$ second

## Isolation

All inputs are isolated to 2600 Vac
Measurement Methods
Voltage, current: true rms
Power: sampling at 64 samples per cycle on all channels measured readings simultaneously A/D conversion: 16 simultaneous 12-bit analog to digital converters

Load Metering

## Event Summary

Event Summary Display
The ATC-900 controller stores 100 transfer summaries, 350 transfer details, 100 alarms and 20 time adjustments.

Events include:

- Actions of the transfer sequence
- Alarms
- Changes to the set points
- Changes to the time/date
- Resetting a historical counter
- Engine run test
- Time-stamping resolution of 1 second.

## Event Details

## Event Details Display

Each transfer event can be exploded to view a step by step, time stamped, sequence of operation for a transfer event. All metered values are also logged for each event and can be viewed on the event data screen. Time stamping resolution of 0.1 seconds.

## Hi-Speed Capture

## High Speed Capture Display, Pre and Post Event

The ATC-900 stores metered data updated on a continuous 20 millisecond basis for specific events. The data is captured 2 seconds before and 2 seconds after the event (except for a power failure, which is 4 seconds before). Oscillographic data for 10 events is stored in the controller and may be downloaded over USB or displayed graphically.

- Events include:
- Source unavailability actions that initiate a transfer sequence (undervoltage, overvoltage, etc.)
- Successful transfers (at the point of breaker/ contactor closure)
- Unsuccessful transfers (at the point of breaker/contactor failure to close or open)

## Industry Standard Communication Protocol

Every ATC-900 controller includes a standard Modbus RTU communications interface with an option to upgrade to Modbus TCP/IP.

The ATC-900 is also compatible with Eaton's Power Xpert Gateway for web-based monitoring, Modbus TCP/IP SNMP, or BACnet/IP. The Power Xpert Gateway can be used to consolidate data from up to 64 devices, including communications ready transfer switch controllers, trip units and meters, as well as other Eaton devices. Versions of the Power Xpert Gateway include email event notification sand data-logging functionality.

## HMi Remote Annunciator and Controller

The HMi Remote Annunciator and Controller monitors and controls up to eight transfer switches on a 7-inch LCD touch screen. It is compatible with either Modbus RTU or Modbus TCP/IP protocols. A basic mimic bus for each transfer switch displays source availability, source connected and preferred source. Users can drill down to metered source values and event history for each transfer switch. All control features are password-protected and include engine test, transfer to emergency (peak shaving), manual retransfer and bypass time delays.

HMi Remote Annunciator and Controller

## USB Programming Port

Every ATC-900 transfer switch includes a front panel, NEMA 4X rated USB port for use in configuring set points or downloading event data to a USB flash drive. To reduce the time spent on site for commissioning, set points can be configured at a PC using the ATC-900 configuration software and saved to a USB flash drive to be uploaded to one or multiple controllers. Set points are also easily copied from one controller to another.

Downloading event capture data provides the user the ability to more thoroughly analyze high-speed capture data using a PC, or data can be emailed to Eaton's Technical Support Team when off site troubleshooting support is required.

USB Programming Port

## Special Applications

## Three-Source ATS Control

The ATC-900 Master/Slave controller functionality provides the user with the ability to use two independent transfer switches in three-source systems consisting of a utility and two generator sources. In a three-source system, the Master ATS controls the engine starting and stopping of the Slave ATS.

In the event of a Source 1 power failure, the Master ATS engine start relay closes signaling the Slave ATS to start both generators. (Note: The Slave ATS requires continuous power using either the DCT Module for a DC power input or a UPS input.) The Master ATS handles all transfer time delays between the utility to generator transfer. If the preferred generator does not start within the programmed time delay, the Slave ATC-900 will initiate a transfer to the non-preferred generator. If "None Preferred" is selected, then both generators will start and the Slave ATS will transfer to the first generator source available. The ATC-900 will sense the load is connected to a good source and shut down the second generator.

## Load Management

The ATC-900 includes several features to enhance the user's ability to manage load while on the alternate source.

- Integrated load metering: provides metering data that allows the user to monitor energy utilization and manage system loading
- Selective load shedding: selectively drop non-essential loads when a user-defined kW level is reached. The transfer switch remains on generator
- Load shed to neutral (where ATS construction allows): provides the ability to load shed to a neutral position from a generator source
- Pre-/post-transfer signals: provides the ability to stop select loads during the transfer process
- Load bank disable output: disengages a load bank if utility power is lost during an engine test

Three-Source Transfer Switch Arrangement

Transfer Switches

## Controller Replacement Guide

## Product Description

## Automatic Transfer Switch Controller Replacement

Eaton automatic transfer switches use several different controller types. These automatic transfer controllers (ATCs) may be ordered as replacement for current manufacturer's existing automatic transfer switches. If vintage analog controller or controller parts are needed, then a separate renewal part data list needs to be referenced. The intent of this section is to address current controllers as listed in the table below.

It is important to note that the same controller type can be used on different switch types and the factory programmed firmware/ options will vary depending on the switch type. Thus it is very important to know the original switch type in order to select the correct controller replacement kit. If there is a question on which kit to select, then providing the factory with the original general order number and/or the 15 -character catalog number will eliminate any doubts regarding the correct kit selection.

## ATC-100 Controller Replacement Kits

The ATC-100 controller is primarily used on residential and light commercial applications up to 400 A . This controller may be used with either contactor-based or molded-case switch designs. The ATC-100 is only used on open transition type transfers. Replacement kits are ordered by style number (see table below).

ATC-100

ATC-100 Replacement Kits

| Switch <br> Type | Controller <br> Type | Replacement <br> Style Number |
| :--- | :--- | :--- |
| Magnum-Based Design | - |  |
| ATC-100 controller is not available | ATC-100 | $\mathbf{8 1 6 0 A 0 0 G 2 3}$ |

| Breaker open transition | ATC-100 | $\mathbf{8 1 6 0 A 0 0 G 2 4}$ |
| Contactor-Based Design | - | - |
| 2-position open transition | - | - |
| 2-position closed transition | - | - |
| 3-position open transition |  |  |
| 3-position closed transition |  |  |
| Note |  |  |

Automatic Transfer Controllers

## ATC-300 Controller Replacement Kits

The ATC-300 controller has been in use for many years and was applied on moldedcase switch units up to 1000 A and contactor-based automatic transfer switches up to 1200 A. In 2012, the ATC-300 was replaced by the ATC-300+ controller. An ATC$300+$ replacement kit is used for replacement of older ATC-300s. When ordering the replacement kit, it is very important to identify that the existing application is either a molded-case switch design, a breaker-based design (has the lockout feature), or a contactor 2-position or 3-position design.
The ATC-300+ has two features-Emergency Inhibit and Manual Retransfer-that
were not available on the ATC-300. If these features were not previously supplied with the ATC-300, then the end user does not have to use these additional features. In addition, the ATC-300+ has communication capability for providing Modbus 485.

The ATC-300 and ATC-300+ have identical size and mounting dimensions. The J 8 pin is now an 8-pin connector versus a 4-pin connector on the older ATC-300. J8 pins 5-6 and 6-8 are the connections for Emergency Inhibit and Manual Retransfer. The replacement kit includes the 8 -pin connector.

ATC-300 Replacement Kits

| Switch <br> Type | Controller <br> Type | Replacement <br> Style Number ${ }^{(1)}$ |
| :--- | :--- | :--- |
| Magnum-Based Design |  | - |
| ATC-300+ controller is not available | - |  |
| Breaker-Based Design |  | $\mathbf{8 1 6 0 A 0 0 G 1 0 0 ~}{ }^{2}{ }^{2}$ |
| Breaker open transition | ATC-300+ |  |
| Contactor-Based Design |  | $\mathbf{8 1 6 0 A 0 0 G 1 0 4}$ |
| 2-position open transition | ATC-300+ | - |
| 2-position closed transition | - | $\mathbf{8 1 6 0 A 0 0 G 1 0 8}$ |
| 3-position open transition | ATC-300+ | - |
| 3-position closed transition | - |  |

## Examples: Replacement Kit Style Number Selection

## Example 1-

## Breaker-Based Design

Review 5th and 6th character in the ATS 15-character catalog number.

- If the 5 th and 6 th character is FD, KD, LD, MD, NB, then select 816000G100
- Example:

ATV3KDA30300XSU
implies 8160A00G100

## Example 2-

## Contactor-Based Design

Review 5th and 6th character to determine if the ATS is a two-position or a threeposition, and then select replacement kit accordingly

Note: C2 is two-position and C3 or C5 is a three-position.

- Example:

ATC3C2X30200XSU implies 8160A00G104

- Example:

ATC3C3X30400XSU implies 8160A00G108

- Example:

ATC3C5X30600XSU implies 8160A00G108

## ATC-300+ Controller Replacement Kits

The ATC-300+ controller was first used in 2012 for molded-case switch, breaker-based (with lockout feature) and open transition contactor-based (2-position and 3 -position) designs. It is also used as the replacement kit for older ATC-300 controllers. It is critical to identify the application that needs a replacement kit. The ATC-300+ is NOT used on closed transition designs.

The ATC-300+ controller will have the lock out feature enabled. If not required, then the feature is jumpered out.

Ordering the breaker-based kit does not assure that the lockout feature (option 16) will be supplied. A note needs to be supplied with the order entry.

Note: This style number will not identify the replacement kit. The ATS catalog number is required to identify the replacement kit. The 15 -character catalog number is on the ATS nameplate located on interior door of the ATS.

ATC-300+ Rear View

## Notes

(1) The replacement style number 8160A00Gxx will include the printed circuit board style number (6D32360Gxx) shown on back of the controller
(2) Identify if lockout feature 16 is required.

## ATC-600 and ATC-800 Controller Replacement Kits

The ATC-600 is used on molded-case switch and breaker-based designs up to 1000 A . It is also used on open transition Magnum power case switch and breaker designs up to 5000 A.

The ATC-800 has been used on closed transition Magnum power case switch and breaker-based designs up to 5000 A. The ATC-800 is currently being used on open and closed transition contactor-based designs up to 1200 A.

Older automatic transfer switches may have used what is referred to as IO Controllers. Controller replacements for those units can be ordered as ATC-600 for open transition and ATC-800 for closed transition.

In some cases, both the ATC-600 and ATC-800 controllers have been used on medium voltage transfer switches.

When ordering the replacement kit, always provide the original GO\# of the ATS to correctly identify the features supplied with the controller. This feature set will then be used to program the replacement controller.

See the table below for the replacement kit style numbers for automatic transfer switches with ATC-600 or ATC-800 controllers. Because each controller was specifically supplied with the standard features and any order-specific optional features, there is no practical way to create a replacement kit style number for each variation of the features supplied. Thus, when ordering the replacement kit 8160A00GXX, the job-specific controller features must be specified. Order-specific features need to be included with the order entry.

See Feature List Steps table on Page V2-T5-90 for identifying the features to be supplied on the order entry.

On the back of the ATC-800/600 controllers is a style number similar to a 2 D 7858 GXX . This style number only identifies the basic control board that is included in the replacement kit per the table on this page. The replacement kit style number listed on this page must be used to order the replacement kit.

ATC-600/800 Replacement Kits

| Switch Type | Controller Type | Replacement Style Number |
| :---: | :---: | :---: |
| Magnum-Based Design |  |  |
| Magnum open transition | ATC-600 | 8160A00G03 ${ }^{\text {(1) }}$ |
| Magnum open transition | ATC-600 | 8160A00G41 ${ }^{(2)}$ |
| Magnum closed transition | ATC-800 | 8160A00G05 ${ }^{\text {(1) }}$ |
| Magnum closed transition | ATC-800 | 8160A00G42 ${ }^{(2)}$ |
| Breaker-Based Design |  |  |
| Breaker open transition | ATC-600 | 8160A00G03 ${ }^{(1)}$ |
| Breaker open transition | ATC-600 | 8160A00G41 ${ }^{(2)}$ |
| Contactor-Based Design |  |  |
| 2-position open transition | ATC-800 | 8160A00G43 ${ }^{(2)}$ |
| 2-position closed transition | ATC-800 | 8160A00G43 ${ }^{2}$ ) |
| 3 -position open transition | ATC-800 | 8160A00G43 ${ }^{(2)}$ |
| 3 -position closed transition | ATC-800 | 8160A00G43 ${ }^{(2)}$ |

| Type | Replacement <br> Style Number |
| :--- | :--- |
| ATC-600/800 Connectors |  |
| J4 19-pin | 67A2590H25 |
| J5 22-pin | 67A2590H26 |
| Source 1 4-pin | $\mathbf{1 2 6 8 C 0 7 H 3 1}$ |
| Source 2 4-pin | $\mathbf{1 2 6 8 C 0 7 H 3 1}$ |
| Load 4-pin | $\mathbf{1 2 6 8 C 0 7 H 3 1}$ |
| J7 4-pin | $\mathbf{1 2 6 8 C 0 7 H 3 1}$ |

## Notes

(1) Kit includes one J4 (19-pin), one J5 (22-pin), four 4-pin connectors (S1, S2, Load, J7 Power) and pins.
(2) Kit does not include any connectors/pins.

## Feature List

The replacement controller needs to match the features originally supplied. The easiest way to supply this list is to provide the original order number from the original shipment. The ATS product line maintains a database with the original feature list. The general order (GO) number is on the ATS nameplate located on the inside of the door. In addition, it is very helpful to also supply the $\mathbf{1 5}$-digit ATS catalog number that can be found on the ATS nameplate.

The existing controller also has a catalog number feature code that defines what features are included. Pressing the Help Lamp Test button will show this code on a scrolling display.
If this information is not supplied on order entry, then the order will be placed on manufacturing hold until the information is supplied.

Feature code example (3f-e3-31-032)

Press Help Lamp Test button to initiate the Display Screen Readout

Feature List Steps

| Step | Action |
| :--- | :--- |
| A. 1 | Identify replacement style number from table on Page V2-T5-89. |
| A.2 | Identify original general order (GO) number. (1)(2) |
| A.3 | Order style number with GO information in the order notes. (3) If the original GO number <br> is hard to identify or is unavailable, then one of the following steps below can be taken. |
| B. 1 | Provide the 9-digit feature code from the ATC-800 or ATC-600 controller. Feature code <br> is viewable from ATC-600 or ATC-800 readout screen by pressing the Help button. <br> Controller must be able to be powered up to view this feature code. On older controllers, <br> the feature code may be 7 or 8 characters. Feature code example (3f-e3-31-032). |
| C. 1 | If the above information is not available, then provide a detailed listing of features <br> to be supplied with the controller. The following questions must be answered. |

## Notes

(1) Not replacement order number.
(2) If ATS is mounted in Eaton motor control center or Eaton switchboard, the ATS order number must be supplied, not the overall gear General Order number. This ATS order number is located on the ATS label.
(3) If the original GO number is not supplied on order entry, then the order will be placed on manufacturing hold until the feature list is supplied.

## ATC-900 Controller Replacement Guide

The ATC-900 controller is used on any of Eaton's automatic transfer switches. It can be used on contactorbased, molded case switchbased, and Magnum power case switch-based designs. In addition, the ATC-900 is used on either open or closed transition type switches. The ATC-900 controller is provided as a replacement controller for existing designs. The selection guide below provides the different style number replacement kits.

ATC-900 Replacement Kit Selector Table

| Switch Type | Number of <br> Positions | Transition | Style Number Kit |
| :--- | :--- | :--- | :--- |
| Contactor-based | 3 | Open | $\mathbf{8 1 6 0 A 9 0 G 0 1}$ |
| Contactor-based | 2 | Open | $\mathbf{8 1 6 0 A 9 0 G 0 7}$ |
| Contactor-based | 3 | Closed | $\mathbf{8 1 6 0 A 9 0 G 1 3}$ |
| Bypass contactor-based | 3 | Open | $\mathbf{8 1 6 0 A 9 0 G 1 9}$ |
| Bypass contactor-based | 3 | Closed | $\mathbf{8 1 6 0 A 9 0 G 2 5}$ |

Contactor-Based-Automatic Transfer Switch Features

| Feature <br> Number | Description | Open Transition |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | AT |  |  | ATC |  |  | NTC |  |
|  |  | C2 | C2 | C2 | C3 | C5 | C2 | C3 | C5 | C2 | C3 |
| Timers |  |  |  |  |  |  |  |  |  |  |  |
| 1 | Time delay normal to emergency (TDNE) fixed 2 or 15 seconds | S | S | - | - | - | - | - | - | - | - |
| 1A | Adjustable 0-1800 seconds | - | - | S | S | S | - | - | - | - | - |
| 1B | Adjustable 0-9999 minutes | - | - | - | - | - | S | S | S | - | - |
| 2 | Time delay engine start (TDES) fixed 3 seconds | S | S | - | - | - | - | - | - | - | - |
| 2A | Adjustable 0-120 seconds | - | - | S | S | S | S | S | S | - | - |
| 3 | Time delay emergency to normal (TDEN) fixed 5 minutes | S | S | - | - | - | - | - | - | - | - |
| 3A | Adjustable 0-1800 seconds | - | - | S | S | S | - | - | - | - | - |
| 3B | Adjustable 0-9999 minutes | - | - | - | - | - | S | S | S | - | - |
| 4 | Time delay engine cooldown (TDEC) fixed 5 minutes | S | S | - | - | - | - | - | - | - | - |
| 4A | Adjustable 0-1800 seconds | - | - | S | S | S | - | - | - | - | - |
| 4B | Adjustable 0-9999 minutes | - | - | - | - | - | S | S | S | - | - |
| Emergency (S2) Source Sensing |  |  |  |  |  |  |  |  |  |  |  |
| 5 H | Phase reversal protection | - | - | S | S | S | S | S | S | - | - |
| 5 J | All phase undervoltage/underfrequency | S | S | S | S | S | S | S | S | - | - |
| 5 K | All phase overvoltage/overfrequency | - | - | S | S | S | S | S | S | - | - |
| 5 L | All phase voltage unbalance | - | - | S | S | S | S | S | S | - | - |
| 5M | All phase voltage phase loss | - | - | - | - | - | S | S | S | - | - |
| 5N | All phase overfrequency | - | - | - | - | - | S | S | S | - | - |
| System or Engine Test |  |  |  |  |  |  |  |  |  |  |  |
| 6B | Engine test pushbutton | S | S | S | S | S | S | S | S | - | - |
| 6C | Remote engine test input | - | - | - | - | - | C | C | C | - | - |
| 6D | Maintained 2-position test switch | - | - | - | - | - | 0 | 0 | 0 | - | - |
| 6 H | Maintained 4-position test switch | - | - | - | - | - | 0 | 0 | 0 | - | - |
| 7 | Time delay emergency fail (TDEF) fixed 6 seconds | S | S | - | - | - | - | - | - | - | - |
| 7A | Adjustable 0-6 seconds | - | - | S | S | S | S | S | S | - | - |

|  | Bypass |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 8C | Bypass TDEN | - | - | S | S | S | S | S | S | - | - |
| 8D | Bypass TDNE | - | - | S | S | S | S | S | S | - | - |
| 8 E | Bypass TDNE/TDEN (input) | - | - | - | - | - | C | C | c | - | - |

## Maintenance Selector Switch

| $9 B$ | Electrical operator isolator switch | - | - | 0 | 0 | 0 | 0 | 0 | 0 | - | - |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

[^29]
## Contactor-Based-Automatic Transfer Switch Features, continued

[^30]
## Contactor-Based-Automatic Transfer Switch Features, continued

S = Standard, $0=$ Optional, C = Configurable
Note
(1) When these options are selected with the ATC-900 controller, the associated input or output will be factory fixed and cannot be reconfigured by the user.

| Number |  | C2 | C2 | C2 | C3 | C5 | C2 | C3 | C5 | C2 | C3 |
| Communications |  |  |  |  |  |  |  |  |  |  |  |
| 48D | PXG400 gateway (includes Modbus) | - | - | 0 | 0 | 0 | 0 | 0 | 0 | - | - |
| 48F | Modbus-MPONI module (PONI not required with ATC-300+) | - | - | 0 | 0 | 0 | - | - | - | - | - |
| 48F | Modbus communication-no PONI required | - | - | S | S | S | S | S | S | - | - |
| 48G | Modbus TCP/IP gateway | - | - | - | - | - | 0 | 0 | 0 | - | - |
| 48P | Power supply for remote annunciator | - | - | 0 | 0 | 0 | 0 | 0 | 0 | - | - |
| 48RAC | Remote annunciator with control (includes Modbus) | - | - | 0 | 0 | 0 | 0 | 0 | 0 | - | - |
| 48MRAC | Remote annunciator with control multi-switch (includes Modbus) | - | - | 0 | 0 | 0 | - | - | - | - | - |
| 48 U | USB port | - | - | - | - | - | S | S | S | - | - |
| 49A | Sensing isolation transformer Magnum | - | - | - | - | - | 0 | 0 | 0 | - | - |
| 49B | Sensing isolation transformer | - | - | 0 | 0 | 0 | 0 | 0 | 0 | - | - |
| 49 C | Multi-tap voltage transformer (non AG only) | - | S | S | S | S | S | S | S | S | S |
| 49C | Multi-tap voltage transformer (option only on fixed) | - | - | - | - | - | - | - | - | - | - |

TVSS up to 480 V (Connected to Normal)

| 51D1 | 50 kA CVX | - | - | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 51F1 | 100 kA CVX | - | - | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

Surge Protection Device with 12 ft Cable (on Normal)

| 51 S1 | 50 kA -SPD (1) | - | - | - | - | - | - | - | - | - | - |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 51S2 | 80 kA -SPD ${ }^{(1)}$ | - | - | - | - | - | - | - | - | - | - |
| 51 S3 | 100 kA -SPD ${ }^{(1)}$ | - | - | - | - | - | - | - | - | - | - |
| 51 S4 | 120 kA -SPD (1) | - | - | - | - | - | - | - | - | - | - |
| 5155 | 160 kA -SPD (1) | - | - | - | - | - | - | - | - | - | - |
| 5156 | 200 kA -SPD (1) | - | - | - | - | - | - | - | - | - | - |
| 51 S7 | 250 kA -SPD (1) | - | - | - | - | - | - | - | - | - | - |
| 5158 | 300 kA -SPD ${ }^{(1)}$ | - | - | - | - | - | - | - | - | - | - |
| 5159 | 400 kA -SPD (1) | - | - | - | - | - | - | - | - | - | - |
| 52B | 24 V generator battery power | - | - | - | - | - | - | - | - | - | - |
| 52 C | 24 V onboard power supply (charger and batteries) | - | - | - | - | - | - | - | - | - | - |
| 54 B | Upgrade to 316 stainless steel | - | - | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 60 | Control power transformer (240/120 V single-phase and 208 V only) | - | 0 | 0 | - | - | - | - | - | - | - |
| 61 A | UPS device | - | - | - | - | - | - | - | - | - | - |
| 61 B | UPS 120 Vac terminal block input | - | - | - | - | - | - | - | - | - | - |
| 80A | Emergency (S2) inhibit contact | - | - | - | 0 | 0 | C | C | C | - | - |

## Monitoring Outputs

| 81A | General alarm indication contact | - | - | - | - | - | C | C | C | - | - |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 81 B | ATS not in automatic | - | - | - | - | - | C | C | C | - | - |
| 81 C | ATS in test | - | - | - | - | - | C | C | C | - | - |
| 81 D | Engine test aborted | - | - | - | - | - | C | C | C | - | - |
| 81 E | Cooldown in process | - | - | - | - | - | C | C | C | - | - |
| 81F | Engine start contact status | - | - | - | - | - | C | C | C | - | - |
| 81G | Emergency inhibit on | - | - | - | - | - | C | C | C | - | - |
| 81GL | Emergency inhibit on with white indicating light (2) | - | - | - | - | - | 0 | 0 | 0 | - | - |
| 81H | ATS on bypass | - | - | - | - | - | C | C | c | - | - |

## Inputs

| 81 J | Lockout | - | - | - | - | - | $C$ | C | C | - |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 81K | Monitor mode | - | - | - | - | - | $C$ | C | C | - |
| 81L | Remote load test | - | - | - | - | - | C | C | C | - |

Three Source ATS Control (Master/Slave)

| 90 A | Master control output | - | - | - | - | - | $C$ | $C$ | $C$ | - |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $90 B$ | Slave input | - | - | - | - | - | $C$ | $C$ | $C$ | - |

S = Standard, $0=$ Optional, $\mathrm{C}=$ Configurable

## Notes

(1) Add feature package B or C (e.g., 51S4B).

B: LED indication and audible alarm, Form C contact, EMI/RFI filtering (standard)
$\mathrm{C}: \mathrm{B}$ and surge counter with Reset button (standard with surge)
(2) When these options are selected with the ATC-900 controller, the associated input or output will be factory fixed and cannot be reconfigured by the user

## Standard and Optional Features

## Contactor-Based - Automatic Transfer Switch Features, continued

| Feature | Description | Open Transition |  |  |  | Closed Transition |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | BIC3 | BIC3 | BIC9 | BIC9 | CBC9 | CBC9 | CTC9 |
| Number |  | C | D | C | D | C | D | C3 |
| Timers |  |  |  |  |  |  |  |  |
| 1A | Adjustable 0-1800 seconds | S | S | - | - | - | - | - |
| 1B | Adjustable 0-9999 minutes | - | - | S | S | S | S | S |
| 2A | Adjustable 0-120 seconds | S | S | S | S | S | S | S |
| 3A | Adjustable 0-1800 seconds | S | S | - | - | - | - | - |
| 3B | Adjustable 0-9999 minutes | - | - | S | S | S | S | S |
| 4A | Adjustable 0-1800 seconds | S | S | - | - | - | - | - |
| 4B | Adjustable 0-9999 minutes | - | - | S | S | S | S | S |
| Emergency (S2) Source Sensing |  |  |  |  |  |  |  |  |
| 5 H | Phase reversal protection | S | S | S | S | S | S | S |
| 5J | All phase undervoltage/underfrequency | S | S | S | S | S | S | S |
| 5 K | All phase overvoltage/overfrequency | S | S | S | S | S | S | S |
| 5 L | All phase voltage unbalance | - | - | 0 | 0 | 0 | 0 | 0 |
| 5M | All phase voltage phase loss | - | - | S | S | S | S | S |
| 5N | All phase overfrequency | - | - | S | S | S | S | S |

## System or Engine Test

| $6 B$ | Engine test pushbutton | $S$ | $S$ | $S$ | $S$ | $S$ | $S$ | $S$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 6C | Remote engine test input | - | - | $C$ | $C$ | $C$ | $C$ | $C$ |
| 6D | Maintained 2-position test switch | - | - | 0 | 0 | 0 | 0 | 0 |
| 6H | Maintained 4-position test switch | - | - | 0 | 0 | 0 | 0 | 0 |
| 7A | Adjustable 0-6 seconds | $S$ | $S$ | $S$ | $S$ | $S$ | $S$ | $S$ |

Pushbutton Bypass

| 8C | Bypass TDEN | S | S | S | S | S | S | S |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 8D | Bypass TDNE | S | S | S | S | S | S | S |
| 8 E | Bypass TDNE/TDEN (input) | - | - | C | C | C | C | C |
| Maintenance Selector Switch |  |  |  |  |  |  |  |  |
| 9B | Electrical operator isolator switch | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| Preferred Source Selector |  |  |  |  |  |  |  |  |
|  | Preferred source selector (programmed) | - | - | S | S | S | S | S |
| 10A | Preferred source selector input | - | - | C |  | C | C | C |
| 10 C | Preferred source selector with selector switch | - | - | 0 | , | 0 | 0 | 0 |
| 10B | Utility to utility or utility to generator | - | - | S | S | S | S | S |
| 10D | Generator to generator | - | - | S | S | S | S | S |

## Indicating Lights/LEDs

| 12 C | Normal (S1) source connected | S | S | S | S | S | S | S |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 12D | Emergency (S2) source connected | S | S | S | S | S | S | S |
| 12G | Normal (S1) source available | S | S | S | S | S | S | S |
| 12 H | Emergency (S2) source available | S | S | S | S | S | S | S |
| 12L | Normal (S1) source tripped (requires feature 16) | - | - | 0 | 0 | 0 | 0 | 0 |
| 12M | Emergency (S2) source tripped (requires feature 16) | - | - | 0 | 0 | 0 | 0 | 0 |

## Source Available Contacts

| 14 C | Normal (S1) source available 4 Form C | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 14 D | Emergency (S2) source available 4 Form C | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 14E | Normal (S1) source available 1 Form C | - | - | S | S | S | S | S |
| 14F | Emergency (S2) source available 1 Form C | - | - | S | S | S | S | S |
| 14G | Normal (S1) source available 2 Form C | S | S | 0 | 0 | 0 | 0 | 0 |
| 14 H | Emergency (S2) source available 2 Form C | S | S | 0 | 0 | 0 | 0 | 0 |

[^31]| Feature | Description | Open Transition |  |  | Closed Transition |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | BIC3 | BIC3 | BIC9 | BIC9 | CBC9 | CBC9 | CTC9 |
| Number |  | C | D | C | D | C | D | C3 |
| Position Contacts |  |  |  |  |  |  |  |  |
| 15E | Normal (S1) source position 1 Form C | S | S | S | S | S | S | S |
| 15 F | Emergency (S2) source position 1 Form C | S | S | S | S | S | S | S |
| 15G | Normal (S1) source position 3 Form C | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 15 H | Emergency (S2) source position 3 Form C | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 15R | Normal (S1) source position 1 Form C (relay OUTPUT) | - | - | C | C | C | C | C |
| 15S | Emergency (S2) source position 1 Form C (relay OUTPUT) | - | - | C | C | C | C | C |
| Integral Overcurrent Protection |  |  |  |  |  |  |  |  |
| 16N | Normal (S1) switch only | - | - | - | - | - | - | - |
| 16E | Emergency (S2) switch only | - | - | - | - | - | - | - |
| 16B | Normal (S1) and emergency (S2) switches | - | - | - | - | - | - | - |
| 16S | Service equipment/overcurrent protection normal (S1) and emergency (S2) | - | - | - | - | - | - | - |

Metering
(Specify normal (S1), emergency (S2) or load side for 18A thru E)

| 18 | Integrated load metering (DCT module) | - | - | 0 | 0 | 0 | 0 | 0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 18A | $10250 / 260$ | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 18B | PX4000/6000/8000 | - | 0 | - | - | - |  | - |
| 18 D | IC 130/140/150 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 18E | PXM2250/2260/2270 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 18J | Integrated metering (DCT module-load side only) | - | - | 0 | 0 | 0 | 0 | 0 |
| 20A | Rear bus connections | - | - | - | - | - | - | - |
| 21A | Non-standard terminals (optional in IES for centers) | - | - | - | - | - | - | - |
| 22 | Ground bus | S | S | - | - | - | - | - |
| 22 C | Special ground bar-contact factory | - | - | - | - | - | - | - |
| 22 D | 16 conductor ground bus 500 or 750 kcmil | 0 | 0 | 0 | 0 | 0 | - | - |

## Plant Exerciser

| 23A | Selectable-disabled 7-, 14-, 28-day interval, fixed 15 minutes load/no load, with fail-safe | - | - | - | - | - | - | - |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 23K | Selectable-disabled 7-, 14-, 28-day interval, 0-600 minutes load/no load, with fail-safe | S | S | - | - | - | - | - |
| 23L | 24-hour, 7-day, 365-day programmable plant exerciser | 0 | 0 | - | - | - | - | - |
| 23M | Selectable-disabled 7-, 14-, 28-, 365-day interval, 0-600 minutes load/no load, with fail-safe | - | - | S | S | S | S | S |

## Normal (S1) Source Sensing

| 26D | Go to emergency (S2) input | S | S | C | C | C | C | C |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 26E | Go to emergency (S2) input with selector switch (1) | - | - | 0 | 0 | 0 | 0 | 0 |
| 26H | Phase reversal protection | S | S | S | S | S | S | S |
| 26 J | All phase undervoltage/underfrequency | S | S | S | S | S | S | S |
| 26K | All phase overvoltage/overfrequency | S | S | S | S | S | S | S |
| 26L | All phase voltage unbalance and phase loss | - | - | 0 | 0 | 0 | 0 | 0 |
| 26L | All phase voltage unbalance | S | S | S | S | S | S | S |
| Alternative Transfer Modes of Operation |  |  |  |  |  |  |  |  |
| 29D | Dual ATS bypass | S | S | S | S | S | S | - |
| 29G | Selector switch for auto or non-auto operation (1) | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 29J | Manual (pushbutton) transfer E to N ; automatic N to $\mathrm{E}^{(1)}$ | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 29L | Manual retransfer on/off input | - | - | C | C | C | C | C |
| 29M | Manual retransfer on/off input with selector switch (1) | - | - | 0 | 0 | 0 | 0 | 0 |
| 29K | Manual retransfer input | - | - | C | C | C | C | C |

## S = Standard, $0=$ Optional, C = Configurable

Note
(1) When these options are selected with the ATC-900 controller, the associated input or output will be factory fixed and cannot be reconfigured by the user.

## Contactor-Based-Automatic Transfer Switch Features, continued

|  |  | Open Transition |  |  |  | Closed Transition |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Feature |  | BIC3 | BIC3 | BIC9 | BIC9 | CBC9 | CBC9 |  |
| Number | Description | C | D | C | D | C | D | C3 |
| Open Transfer Operation Modes |  |  |  |  |  |  |  |  |
| 32A | Time delay neutral adjustable 0-120 seconds (delayed transition) | S | S | C | C | - | - | - |
| 32 B | Load voltage decay adjustable 2-30\% nominal voltage | - | - | C | C | - | - | - |
| 32 C | In-phase transition defaults to load voltage decay | - | - | - | - | - | - | - |
| 32D | In-phase transition defaults to time delay neutral | - | - | - | - | - | - | - |
| 32E | Delay transition timer adjustable 3-60 seconds | - | - | - | - | - | - | - |
| 32F | In-phase transition | - | - | - | - | - | - | - |
| 32G | Time delay neutral fixed 0 or 2 seconds (delayed transition) | - | - | - | - | - | - | - |
| Load Control |  |  |  |  |  |  |  |  |
| 35 A | Pre-transfer signal contacts 1 Form C | S | S | C | C | C | C | C |
| 35B | Pre-/post-transfer signal | - | - | C | C | C | C | C |
| 36 | Load shed from emergency (S2 inhibit) | S | S | C | C | C | C | C |
| 36A | Load shed-S2 inhibit with keyed switch (INPUT) | - | - | 0 | 0 | 0 | 0 | 0 |
| 37 | Go to "isolated" position (not SE rated) | - | - | C | C | C | C | C |
| Suitable for Use as Service Equipment Requires 16B, N or S |  |  |  |  |  |  |  |  |
| 37A | Without ground fault protection | - | - | - | - | - | - | - |
| 37B | With ground fault protection required at 1000 A or more if the electrical service is a solidly grounded wye system of more than 150 V to ground but not exceeding 600 V phase to phase | - | - | - | - | - | - | - |

| Stainless Steel Device Covers |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 38A | SS cover for device plate or SE disconnect | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| $38 B$ | SS cover for controller | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

## Space Heater with Thermostat

| 41A | 100 watts | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

S = Standard, $0=$ Optional, $\mathrm{C}=$ Configurable

## Notes

(1) Add feature package B or C (e.g., 51S4B).

B: LED indication and audible alarm, Form C contact, EMI/RFI filtering (standard)
$C: B$ and surge counter with Reset button (standard with surge)
(2) When these options are selected with the ATC-900 controller, the associated input or output will be factory fixed and cannot be reconfigured by the user.

S = Standard, $0=$ Optional, $\mathrm{C}=$ Configurable

## Notes

(1) Add feature package B or C (i.e., 51S4B).

B: LED indication + audible alarm, Form C contact, EMI/RFI filtering (standard)
C: B + surge counter with Reset button (standard with surge)
(2) When these options are selected with the ATC-900 controller, the associated input or output will be factory fixed and cannot be reconfigured by the user.

## Feature Description

## Timers

## 1. Time Delay Normal to Emergency (TDNE)

Provides a time delay to allow for the generator to warm up before transferring the load to the emergency source.
Timing begins only after the Emergency Source becomes available and is deemed good based on the programmable voltage and frequency set points in the controller.

## 2. Time Delay Engine Start (TDES)

Provides a time delay before initiating the generator start cycle. This is to account for momentary power outages or voltage fluctuations of the normal source. Provides a Form C contact to the generator starter circuit.

## 3. Time Delay Emergency to Normal (TDEN)

Provides a time delay of the retransfer operation to permit stabilization of the normal source. Timing begins only after the normal source becomes available and is deemed good based on the programmable voltage and frequency set points in the controller. This function is failsafe protected.

## 4. Time Delay Engine Cooldown (TDEC)

Provides a time delay before initiating the generator stop cycle after the retransfer operation. This allows the generator to cool down by running unloaded. Timing begins on completion of the retransfer cycle.

## Source 2 Sensing

5. Source 2-Monitoring and Protection
Provides monitoring and protection based on the Source 2 voltage and/or frequency set points. All
Feature 5 monitoring and protection functions are failsafe operations.

## 5H. Three-Phase Rotation Protection

Provides three-phase reversal sensing in order to protect against transferring to an out-of-phase source. The controller will treat the opposite source as unavailable if the sources are out of phase, based on programmable set points in the controller.

## 5J. All-Phase Undervoltage/ Underfrequency Protection

Provides undervoltage/ underfrequency monitoring and protection based on programmable set points in the controller.

## 5K. All-Phase OvervoItage/

 Overfrequency ProtectionProvides overvoltage/ overfrequency monitoring and protection based on programmable set points in the controller.

## 5L. Three-Phase Voltage

 Unbalance/Phase LossProvides phase loss detection from blown fuses on the Source 2 supply circuit.

## 5M. All Phase Voltage

 Phase LossProvides phase loss detection on the Source 2 supply circuit.

## 6B. Test Operators

Automatic transfer switches are provided with a controller faceplate test pushbutton that simulates a loss of the Source 1 as standard. All programmed time delays (TDNE, TDEN, etc.) will be performed as part of the test. Engine run time of the test is equal to the plant exerciser programmed set point. All tests are fail-safe protected.

## 6C. Remote Engine Test (INPUT)

Provides an input to initiate a test to simulate a loss of the Source 1 as standard. All programmed time delays (TDNE, TDEN, etc.) will be performed as part of the test. Engine run time of the test is equal to the plant exerciser programmed set point. All tests are fail-safe protected. The test is initiated via remote momentary contact closure.

## 6D. Maintained 2 Position Test Switch

Provides a door-mounted 2position test switch marked "Auto" and "Test". Available with ATC-900 controller only.

## 6H. 4-Position Test Selector Switch (FPSS)

Provides a door-mounted 4position, maintained contact selector switch marked "Auto," "Test," "Engine Start," and "Off." The FPSS is fail-safe protected, except for the "Off Position."
Transfer switch operation is determined by the switch position. Transfer switch operations are as follows:
"Auto"—Automatic operation mode.
"Test"—A load test is performed until the switch is moved to another position.
"Engine Start"—A no-load test is performed until the switch is moved to another position.
"Off"-The automatic transfer controller and engine start contact are disabled. A white pilot light is provided to indicate that the FPSS is in the "Off" position.

## 7. Time Delay Emergency Fail (TDEF)

Provides a time delay that prevents a connected emergency source from being declared "unavailable" based on the customer's set points. This is to account for momentary generator fluctuations. If the Source 2 remains in a failed state, then 0.5 seconds after the TDEF timer expires the transfer switch will proceed with the programmed sequence for retransfer if Source 1 is available.
This time delay is only implemented when Source 2 is a generator.

Note: This feature is also enabled when large loads cause generator output to drop below customer set points.

## 8. Time Delay Bypass Pushbutton

Provides a momentary contact pushbutton to bypass the TDNE (Feature 1) and/or TDEN (Feature 3) time delays. The Time Delay Bypass Pushbutton contact, when closed, will reduce any or all of the programmed time delay to zero. Must be executed when TDNE or TDEN timer is displayed on the controller.

## 8C. Bypass Time Delay Emergency to Normal (TDEN)

8D. Bypass Time Delay Normal to Emergency (TDNE)

## 8E. Bypass TDNE/TDEN (INPUT)

Provides input to bypass the
TDNE (Feature 1) and/or
TDEN (Feature 2) time
delays. The Time Delay Bypass Pushbutton contact, when closed, will reduce any or all of the programmed time delay to zero. Must be executed when TDNE or TDEN timer is displayed on the controller. The bypass time delay feature is initiated via remote momentary contact closure.

## 8F. Bypass Timers-

 External Pushbutton InputProvides an input from a customer supplied external pushbutton to bypass or reduce the programmed time delays to zero for TDEN and TDNE.

## 9B. Maintenance Selector Switch (MSS)

Provides a 2-position, maintained contact selector switch marked "Operate" and "Disable." When the MSS is placed in the "Disable" position, the controller logic will be disconnected from the transfer motor circuit. The MSS is placed in the
"Operate" position for normal automatic operation.

## 9C. Monitor Mode Selector Switch

Provides a 2-position selector switch to enable/disable Monitor Mode on the controller. When enabled, the controller will monitor the availability, connected state and voltage conditions and will initiate a transfer.

## 10. Preferred Source Selector

Provides a means to designate either Source 1 or Source 2 as the "Preferred" source. The "Preferred" source is the source that the transfer switch will connect the load to if it is available.

Note: This is a programmable software feature not an actual switch.

## 10A. Preferred Source Selector (INPUT)

Provides a means to designate either Source 1 or Source 2 as the "Preferred" source using a remote contact or device panel mounted contact closure. The "Preferred" source is the source that the transfer switch will connect the load to if it is available.

## 10B. Preferred Source

 SelectorProvides a programmable source selector for use on systems comprised of dual utility or utility and engine/ generator power sources.

## 10C. Preferred Source Selector with Selector Switch

Provides a means to designate either Source 1 or Source 2 as the "Preferred" source via device panel mounted selector switch control. The "Preferred" source is the source that the transfer switch will connect the load to if it is available.

## 10D. Preferred Source Selector

Provides a programmable source selector for use on systems comprised of dual engine/generator power sources. (Dual engine starting circuits are provided.)

## 12C. Source 1-Load Connected

Provides a green indication that indicates the load is connected to Source 1 when lit.

12D. Source 2-Load
Connected Connected
Provides a red indication that indicates the load is connected to Source 2 when lit.

## 12G. Source 1-Present

Provides a white or amber indication "Depending on the Controller" that Source 1 has power; however, this does not indicate whether Source 1 is acceptable.

## 12H. Source 2-Present

Provides an amber indication that Source 2has power; however, this does not indicate whether Source 2 is acceptable.

## Overcurrent Trip Indication

Available only with integral overcurrent protection (Feature 16) (shown on automatic transfer controller display).

## 12L. Source 1 Trip Indication

The automatic transfer controller display will read
"Lockout" if the Source 1 circuit breaker is in the "tripped" position.

## 12M. Source 2 Trip

 IndicationThe automatic transfer controller display will read "Lockout" if the Source 2 circuit breaker is in the "tripped" position.

## 14. Relay Auxiliary Contacts 14C. Source 1 Present <br> Provides 4 Form C relay auxiliary contacts. The relay is energized when Source 1 is present.

## 14D. Source 2 Present

Provides 4 Form C relay auxiliary contacts. The relay is energized when Source 2 is present.

## 14E. Source 1 Available

Provides 1 Form C relay auxiliary contact. The relay is energized when Source 1 is available and within the controller's programmable set points.

## 14F. Source 2 Available

Provides 1 Form C relay auxiliary contact. The relay is energized when Source 2 is available and within the controller's programmable set points.

## 14G. Source 1 Present

Provides 2 Form C relay auxiliary contacts. The relay is energized when Source 1 is present.

## 14H. Source 2 Present

Provides 2 Form C relay auxiliary contacts. The relay is energized when Source 2 is present.

## 14J. Source 1 Present

Provides 4 Form C relay auxiliary contacts. The relay is energized when Source 1 is present.

## 14K. Source 2 Present

Provides 4 Form C relay auxiliary contacts. The relay is energized when Source 2 is present.

## 14L. Source 1 Present

Provides 2 Form C relay auxiliary contacts. The relay is energized when Source 1 is present.

## 14M. Source 2 Present

Provides 2 Form C relay auxiliary contacts. The relay is energized when Source 1 is present.

## 15. Switch Position Indication Contact

Provides a contact that indicates if the power switching device is in the "open" or "closed" position.

## 15E. Source 1 Position

 Indication ContactProvides 1 Form C contact that indicates the position of the Source 1 power switching device.

## 15F. Source 2 Position

 Indication ContactProvides 1 Form C contact that indicates the position of the Source 2 power switching device.

## 15G. Source 1 Position

 Indication ContactProvides 3 Form C contact that indicates the position of Source 1 power switching device.

## 15H. Source 2 Position

 Indication ContactProvides 3 Form C contact that indicates the position of Source 1 power switching device.

## 15K. Normal (S1) Breaker

 Position Indication 1 Form C (Output)Provides 1 Form C contact of the breaker indicating the breaker position.
15L. Normal (S1) Breaker Position Indication 2 Form C (Output)
Provides 2 Form C contact of the breaker indicating the breaker position.

## 15M. Source 2 Load Shed Contacts

Provides 4 Form C contacts to initiate a load circuit disconnect while on Source 2. This gives the user the capability of selectively choosing not to run certain loads while on Source 2.

## 15R. Normal (S1) Source Position 1 Form C (Relay

 OUTPUT)Provides 1 Form C relay contact that indicates the position of the Source 1 power switching device.
15S. Emergency (S2) Source Position 1 Form C (Relay OUTPUT)
Provides 1 Form C relay contact that indicates the position of the Source 2 power switching device.

## 16B. Integral Overcurrent

 Protection on Both Power Source Switching Devices Provides integral overcurrent protection on both Source 1 and Source 2 power switching devices.16E. Integral Overcurrent Protection on the Source 2 Power Switching Device Provides integral overcurrent protection on the Source 2 power switching device.

## 16N. Integral Overcurrent

 Protection on the Source 1 Power Switching DeviceProvides integral overcurrent protection on the Source 1 power switching device.

## 16S. External Overcurrent Protection on the Source 1 Power Switching Device

Provides overcurrent protection on the Source 1 power switching device.

## 17. Breaker with an Overcurrent Trip Unit

## 17H. Padlockable Handle

 Lock HaspProvides a means to padlock the breaker supplied only on a service entrance rated contactor based design. The padlock kit is provided as a ship loose item and able to be customer mounted as a mechanical means to lock out the breaker.

17N. Normal (S1) Breaker with Eaton 310+ Trip Unit
The UL 1008 integrated service entrance rated contactor design has a $100 \%$ load rating.

## 18. Metering

The ATS controller provides voltage and frequency readings. If additional metering functions are required, Eaton offers a series of digital meters that may be added to the ATS. The meter type can provide simple current and voltage readings or more capable meters providing Power, Demand and energy readings.
Available with an optional communications interface.

## (See Feature 48-

Communications for available communication modules.)

Feature 18 metering options include all required external devices (CTs, etc.) for a fully functioning metering system.

## 18J. Integrated Metering (LOAD Side)

This metering option incorporates basic load metering into the ATC-900 using the add-on DCT module. In addition to the standard voltage and frequency metering, the DCT module adds current, real power, reactive power apparent power, and power factor. This option also enables the selective load shed feature (option 45L).

IO 130/140/150
(Option 18d)

## O 130

This digital meter provides basic current and voltage per phase (L-L, L-N) and min./ max. readings (I, V). Optional communication RS-485, Modbus RTU.

## IQ 140

In addition to basic current and voltage, will provide frequency, power measurements real, reactive and apparent power, total (W, VAR, VA). Optional communication RS-485, Modbus RTU.

## IQ 150

In addition to basic current/ voltage/frequency and power readings, will provide Energy Real reactive and apparent (Wh, VAR, VAh). Optional communication RS-485, Modbus RTU.

## IO 250/260 (Option 18a) <br> IQ 250

This digital meter provides current per phase and current demand, voltage (L-L, L-N) and frequency. Power, energy and demand readings. Real, reactive and apparent power and energy, power factor. RS-485 communications, Modbus RTU or ASCII. Optional I/O slots available.

## IQ 260

In addition to all of the features of the IQ 250, power quality analysis is available with THD voltage and current per phase.

## Power Xpert 2000 <br> (Option 18e)

Provides either a Power Xpert PXM 2250, PXM 2260 or PXM 2270 meter.
Power Xpert 4000, 6000, 8000 (Option 18b)
Provides one of the Power Xpert Meters with or without graphic displays.

## 20A. Rear Bus Provisions

Provides Source 1, Source
2 and Load Circuit rear accessible bus stabs with provision for bus bar connection. Eaton transfer switches are provided with either front or rear
(dependent on switch type) connected solderless screwtype terminals for power cable connection as standard.

## 21A. Optional Power Cable Connection Terminals

Eaton transfer switches are provided as standard with
Source 1, Source 2 and load circuit solderless screw-type terminals for power cable connection. Alternate terminal wire sizes, and compression lug provisions may be available dependent on transfer switch type and ampere rating.

## Plant Exerciser

23A. Plant Exerciser With Fail-Safe
Provides a means for automatic testing of the engine generator set or standby power system. All programmed time delays in the controller will be performed during plant exerciser operations.

Programmable set points for test intervals are start time, either disabled, daily, 7, 14 or 28 days.

15-minute fixed engine test time.

Test may be performed with or without load transfer. Test may be manually cancelled during the operation. This function is fail-safe protected.

## 23K. Plant Exerciser With

## Fail-Safe

Provides a means for automatic testing of the engine generator set or standby power system. All programmed time delays in the controller will be performed during plant exerciser operations.

Programmable set points for test intervals are start time, either disabled, daily, 7, 14 or 28 days, engine test time.

Test may be performed with or without load transfer. Test may be manually cancelled during the operation. This function is fail-safe protected.

Standard and Optional Features

23M. Selectable-Disabled, 7, 14, 28 or Day Interval, or Calendar Date, 0-600 Minutes, Load/No Load, with Fail-safe
Provides a means for automatic testing of the engine generator set or standby power system. All programmed time delays in the controller will be performed during plant exerciser operations. Programmable set points for test intervals are start time, engine test time and either disabled, daily, 7, 14 or 28 days or up to 12 specific calendar dates. Test may be performed with or without load transfer. Test may be manually cancelled during the operation. This function is failsafe protected. This feature includes independent time delays for time delay normal to emergency, time delay emergency to normal and time delay for engine cooldown.

## Source 1 Sensing

## 26. Source 1-Monitoring and Protection

Provides Source 1 monitoring and protection functions. If Source 1 fails, then the automatic transfer controller will begin the sequence of operations necessary to transfer the load to Source 2. All Feature $\mathbf{2 6}$ monitoring and protection functions are failsafe operations.

## 26D. Go to Emergency (Source 2)

Provides the capability for an external contact closure to initiate a transfer to the Source 2 power source. This includes starting the generator, performing the programmed time delays and the transfer operation. Retransfer will occur when the external contact is opened. This is a fail-safe function.

26E. Go to Emergency (S2) Input with Selector Switch
Provides a device panel mounted selector switch labeled, "Auto/Go to Source $2^{\prime \prime}$, to initiate a transfer to the Source 2 power source. This includes starting the generator, performing the programmed time delays and the transfer operation. Retransfer will occur when the external contact is opened. This is a fail-safe function.

## 26H. Three-Phase Rotation Protection

Provides three-phase reversal sensing in order to protect against transferring to an out-of-phase source. The controller will treat the opposite source as unavailable if the sources are out of phase, based on programmable set points in the controller.

## 26J. All-Phase <br> Undervoltage/ <br> Underfrequency Protection

Provides all-phase
undervoltage/underfrequency monitoring and protection based on programmable set points in the controller.

## 26K. All-Phase Overvoltage/

 Overfrequency ProtectionProvides all-phase overvoltage/overfrequency monitoring and protection based on programmable set points in the controller.

## 26L. Three-Phase Voltage Unbalance/ Phase Loss

Provides phase loss detection from blown fuses on the Source 1.

## 26M. All-Phase Voltage Phase Loss

Provides phase loss detection on the Source 1 supply circuit.

26N. All-Phase Undervoltage Protection
Provides undervoltage protection for Source 1 (ATC-100 Controller only).

## 29. Transfer Operation Modes <br> Provides standard or optional transfer modes, mode selection devices and operational methods for transfer switches.

## 29D. Dual ATS Bypass

Provides an active controller while the bypass isolation switch is in the bypass mode.

## 29G. Automatic/Manual Operation With Selector Switch

Provides 2-position selector switch (labeled Auto/manual) that permits selection of the automatic or manual transfer. When in the "Auto" position, the transfer switch operates with fully automatic transfer, retransfer and generator startup and shutdown operations. When in the "Manual" position, manual operation is required to initiate the generator startup or retransfer with generator shutdown operations.

Note: Transfer switches with Feature $\mathbf{2 9}$ must be labeled as non-automatic transfer switch equipment.

## 29J. Automatic Transfer or

 Automatic Transfer With Non-Automatic Retransfer OperationProvides a field-selectable programmable set point that permits the transfer switch to operate in one of the following two transfer modes (A or B):
A. Fully automatic operation.
B. Automatic engine/ generator startup and automatic transfer operation from Source 1 to Source 2. Manual pushbutton operation is required to initiate the retransfer operation and engine/generator shutdown. The pushbutton for manual retransfer operation is included. This is fail-safe protected.

## 29K. Manual Retransfer (INPUT)

Provides an input to remotely initiate a manual retransfer from Source 2 to Source 1.

## 29L. Manual Retransfer On/

 Off (INPUT)Provides an input to remotely enable or disable the manual retransfer feature.

## 29M. Manual Retransfer On/Off Input with Selector Switch

Provides a device panel mounted selector switch to enable or disable the manual retransfer feature. Selection of this option automatically adds option 29J.

## 32. Delayed Transition Transfer Modes for Open Transition Transfer

## Switches

Provides delayed transition transfer modes for an open transition transfer switch. Often used in systems with inductive loads, a delayed transition transfer switch may prevent or reduce inrush currents due to out-of-phase switching of inductive loads.

## 32A. Time Delay Neutral

Provides a time delay in the neutral position during the transfer and retransfer operations during which both Source 1 and Source 2 are disconnected from the load circuit. This allows inductive loads time to reach a safe voltage and eliminate back EMF. The time delay is programmable and is the same for both transfer and retransfer operations. This is a passive feature that requires the consulting engineer/installer to determine the settings based on how the user will operate the facility. Adjustable 0-120 seconds.

Standard and Optional Features

## 32B. Load Voltage Decay

Provides load voltage measurement to sense back EMF that is generated when the transfer switch is the neutral position. It provides a delay in transfer in either direction if an unacceptable level is sensed as established by a programmed set point. This is an active feature that adapts to how the facility is operating in order to minimize neutral position wait time, but ensure safety. Adjustable $2-30 \%$ of nominal voltage.

32C. In-Phase Transition With Default to Load Voltage Decay
Provides in-phase transition, which is a feature that will permit a transfer or retransfer between two available sources that have a phase angle difference near zero.
The in-phase transition feature includes permissible frequency difference and synchronization time set points. In the event Source 1 and Source 2 fail to synchronize within the permitted frequency difference and time, then the controller defaults to the load voltage decay operation as described in Feature 32B
Adjustable frequency difference $0.0-3.0 \mathrm{~Hz}$. Adjustable synchronization time allowance 1-60 minutes.

## 32D. In-Phase Transition With Default to Time Delay Neutral

Provides in-phase transition, which is a feature that will permit a transfer or retransfer only between two available sources that have a phase angle difference near zero. The in-phase transition feature includes permissible frequency difference and synchronization time set points. In the event Source 1 and Source 2 fail to synchronize within the permitted frequency difference and time, then the controller defaults to the time delay neutral operation as described in Feature 32A. Adjustable frequency difference $0.0-3.0 \mathrm{~Hz}$. Adjustable synchronization time allowance 1-60 minutes.

## 32E. Delayed Transition

The transfer and retransfer operations during which both Source 1 and Source 2 are disconnected from the load circuit. The time delay is programmable and the same for both transfer and retransfer operation. Adjustable 3-60 seconds.

## 32F. In-Phase Transition

Provides in-phase transition, this feature will permit a transfer or retransfer between two available sources that have a phase angle difference of 8 degrees or less. The in-phase transition feature includes permissible frequency difference and synchronization time set points. In the event Source 1 and Source 2 fail to synchronize within the permitted frequency difference and time, the Alarm relay will energize and "Failed to Sync" will be displayed on Line 1 of the controller. After resetting the alarm, another in-phase transition may be attempted or a non-synchronized transfer may be initiated by failing the connected source. The adjustable frequency difference is 0.0 to 3.0 Hz .

If the synchronization does not occur within a specified amount of time, the Alarm relay will energize and the failure will be logged into the transfer history as either "Sync Fail - Freq" or "Sync Fail - Phase" depending on whether the frequency difference or the phase difference was excessive.

## 32G. Time Delay Neutral

This feature provides a time delay in the neutral position during the transfer and retransfer operations during which both the utility source and the generator source are disconnected from the load circuit. TDN cannot be implemented on a transfer switch using a 2-position contactor.

Jumper selectable at disable (0 seconds) or enable (2 seconds).

## Logic Extender Cable

34A. 48 Inches ( 1219 mm )
Provides logic extension cable with connectors.

34C. 96 Inches ( $\mathbf{2 4 3 8} \mathbf{~ m m}$ )
Provides logic extension cable with connectors.

34E. 144 Inches ( $\mathbf{3 6 5 8} \mathbf{~ m m}$ ) Provides logic extension cable with connectors.
34F. 100 Inches ( $\mathbf{2 5 4 0} \mathbf{~ m m}$ ) Provides logic extension only for open Magnum ATS.

## 35A. Pre-Transfer Signal with 1 Form C Contact

Provides a signal prior to the transferring of the load. Will not transfer until the programmable delay set point in the controller is reached. The pre-transfer time delay option, if both sources are not available, will ignore the time delay set in the controller.

## 35C. Pre-/Post-Transfer Signal (OUTPUT)

Provides a Form C contact signal prior to and after a transfer from S1 to S2 or S2 back to S1. Will not transfer until the programmable delay set point in the controller is reached. If both sources are not available, this option will ignore the time delay set in the controller. The time delay is programmable for $0-120$ seconds pre transfer and 0120 seconds post transfer.

## 35D. Post-Transfer Signal with 1 Form C Contact

Provides a Form C output from the ATC-900 to signal that the switch did transfer. The time delay is programmable for 0-120 seconds but does not start to count down until connected to the new source.

## 36. Load Shed From Emergency

Provides the capability for an external NC contact to initiate a load circuit disconnection from the Source 2 power source. If the load circuit is connected to Source 2 and the contact is opened, then a retransfer to Source 1 is completed if Source 1 is available. If Source 1 is not available, then the transfer switch will transfer to neutral. If the load circuit is connected to Source 1 and the contact is open, then a transfer Source 2 is prohibited.
36A. Load Shed-S2 Inhibit with Keyed Switch (INPUT)
Provides a device panel mounted selector switch to initiate a load circuit disconnection from the Source 2 power source. If the load circuit is connected to Source 2 and the selector switch is switched to the "S2 Inhibit/Enabled" position, then a retransfer to Source 1 is completed if Source 1 is available. If Source 1 is not available, then the transfer switch will transfer to neutral. If the load circuit is connected to Source 1 and the switch is in the "S2 Inhibit" position, then a transfer Source 2 is prohibited.

Standard and Optional Features

## 37. Go to Neutral (not SE Rated) (INPUT)

Provides an input to transfer a three-position transfer switch from either of the connected sources to the off or neutral position. This features applies only to those transfer switches with three-position power device using a remote contact closure. When the signal is removed, the transfer switch will transfer back to the available, preferred source.

## Service Equipment Rated Transfer Switch

Provides the label "suitable for use as service equipment" and the features necessary to meet the requirements for the label. Includes service disconnect with visible indication and neutral assembly with removable link. Feature 16B or 16N must be selected separately for a molded case or power case switch design and 17N for a service rated contactor design.

## 37A. Service Equipment <br> Rated Transfer Switch Without Ground Fault Protection

Provides service equipment rating for an application that does not require ground fault protection.

## 37B. Service Equipment

Rated Transfer Switch With Ground Fault Protection
Provides service equipment rating for an application that requires ground fault protection.

## 38. Steel Cover

Provides protection for a device panel as option 38a and protection for the controller as option 38b.

## 39. Distribution Panel

The distribution panel feature uses a panelboard design with bolt-on circuit breakers type EHD. Bolt-on breakers are designed to hold up to the changes in temperature and humidity that an industrial application calls for. (240/ 120 Vac single-phase systems only.)

39A. 225 A With (2) 200 A Feeders
39B. 300 A With (3) 200 A Feeders
39C. 400 A With (4) 200 A Feeders
41. Space Heater With Thermostat
Provides a space heater and adjustable thermostat. External control power is not required. Availability is dependent on transfer switch type.
41A. Space Heater With Thermostat-100 Watt
Provides 100-watt space heater with an adjustable thermostat.

41E. Space Heater With Thermostat-375 Watt
Provides 375-watt space heater with an adjustable thermostat.

## 42. Seismic Qualification <br> 45. Load Sequencing Capability

Provides the capability for sequential closure of up to 10 addressable relays after a transfer. Each addressable relay provides (1) Form C contact. A single adjustable time delay between each of the relay closures is provided. Operates via a subnetwork. Adjustable 1-120 seconds.

## 45A-J. Load Sequencing

 Contacts (1-10) (OUTPUT)Provides the capability for sequential contact closure of up to 10 contacts after a transfer. A single adjustable time delay between each of the relay closures is provided. Operates using the configurable output contacts (Form C). Adjustable 0-120 seconds. Each individual configurable contact has its own adjustable time delay. When more than one contact is supplied, they start the timing sequence at the same time.

## 45L. Selective Load Shed

Provides an output contact that opens to shed a customer load if the measured kW value exceeds the load shed kW set point value. The load will be picked up if the load restore set point is attained.

## 47. Transfer Modes for Closed Transition Transfer Switches

Provides available transition transfer modes for a closed transition transfer switch. Closed transition is a "make before break" transfer and retransfer scheme that will parallel (a maximum of 100 ms) Source 1 and Source 2 providing a seamless transfer when both sources are available. The closed transition feature includes permissible voltage difference frequency difference and synchronization time allowance set points. The phase angle difference between the two sources must be near zero for a permitted transfer. These are all programmable set points in the controller.

47C. Closed Transition With Default to In-Phase Transition With Default to Load Voltage Decay
Provides a closed transition transfer as the primary transfer mode. In the event Source 1 and Source 2 fail to synchronize within the permitted voltage difference, frequency difference, phase angle difference and time, then the controller defaults to the in-phase transition with default to load voltage decay operations as described in
Feature 32C and 32B.
Adjustable frequency difference $0.0-0.3 \mathrm{~Hz}$. Adjustable voltage difference $1-5 \%$ volts. Adjustable synchronization time allowance 1-60 minutes.

## 47D. Closed Transition

Provides a closed transition
transfer as the primary transfer mode. Only under a fail-safe condition (i.e., loss of the connected source) will the controller transfer to the alternate source using the load voltage decay operation as described in Feature 32B. Adjustable frequency difference $0.0-0.3 \mathrm{~Hz}$. Adjustable voltage difference $1-5 \%$ V.

47E. Closed Transition With Default to In-Phase Transition With Default to Time Delay Neutral
Provides a closed transition transfer as the primary transfer mode. In the event Source 1 and Source 2 fail to synchronize within the permitted voltage difference, frequency difference, phase angle difference and time, then the controller defaults to the in-phase transition with default to time delay neutral operation as described in
Features 32D and 32A.
Adjustable frequency difference $0.0-0.3 \mathrm{~Hz}$. Adjustable voltage difference $1-5$ percent volts. Adjustable synchronization time allowance 1-60 minutes.

## 47F. Closed/Load Voltage <br> Decay

Controllers equipped with Feature Set 47F will perform a closed transition when both sources are synchronized in frequency, phase and voltage. Failure to synchronize will result in an open transition Time Delay Load Voltage Decay transfer. Time Delay Load Voltage Decay uses the load voltage measurements to sense back EMF that is generated when the transfer switch is in the Neutral position.

It provides a delay in transfer in either direction if an unacceptable level is sensed as established by a customer programmed level. The transfer will not take place until the back EMF decays below the acceptable programmed level. This feature has a separate setting of enabling or disabling the operation. If disabled, the transfer switch will not delay in the Neutral position and will transfer between the sources as fast as possible. This feature is not available with the Time Delay Neutral Optional Feature 32A.

## 47G. Closed/Time Delay Neutral

Controllers equipped with Feature Set 47F will perform a closed transition transfer when both sources are synchronized in frequency, phase and voltage. Failure to synchronize will result in an open transition Time Delay Neutral transfer. Time Delay Neutral provides a time delay in the transfer switch neutral position when both sources are open. This delay takes place when the load is transferred in either direction to prevent excessive in-rush currents due to out-of-phase switching of large motor loads.

## 47H. Parallel Limit Timer

Provides an independent timing relay with NO contact (watchdog timer) activated only during a closed transition transfer. The timing is set to 100 ms per code requirements and will initiate a contact closure that can be used by the end user to annunciate an alarm or to trip an upstream breaker.

## 48. Communication Modules

Provides communications modules for the transfer switch controllers.

## 48D. Ethernet Communication (PXG900 Gateway)

Translates Modbus RTU, QCPort or INCOM to Modbus TCP. The PXG900 Gateway includes embedded Web server monitoring of up to 64 connected devices.

## 48F. Modbus

## Communication (MPONI)

Provides Modbus RTU protocol via communications module.

## 48G. Modbus TCP/IP

Provides a third-party device for Modbus 485 to Modbus TCP/IP pass through.

48M1-48M4. I/O Module
Each I/O module provides four additional user configurable inputs and outputs. Up to four additional I/O modules can be added, either by the factory or in the field.

## 48MRAC. Multi-view Remote Annunciator with Control

Provides remote monitoring of source availability, source position and test status for up to eight transfer switches with the ATC-300+ or ATC900 controller. Operates using Modbus protocol.

## 48P. Remote Annunciator

 Power SupplyProvides a remote mounted power supply providing DC power to the remote annunciator.

## 48RAC. Remote

Annunciator with Control
Provides remote monitoring and control via a color touch screen display for the controllers. Operates using Modbus protocol (MPONI required for the ATC-600/ 800).

48U. USB Port for Memory Stick
Provides a device panel mounted USB port for uploading or downloading controller set points and for downloading event history.

## 49. Sensing Isolation Transformer

Provides a set of control power transformers that converts the delta system sensing to a wye sensing input to the controller. The sensing isolation transformer is recommended for high resistance grounded systems and for grounded delta systems.

## 49A. Sensing Isolation Transformer

Option 49A is available for Magnum ATSs.

## 49B. Sensing Isolation Transformer

Option 49B is available for MCCB and contactor transfer switches.

## 49C. Multi-Tap Control Power Transformer

The multi-tap control power transformer is used to stepdown voltage to 120 Vac for the transfer switch control circuit. Incoming voltage can be adjusted by moving the tap on the primary side from $208 \mathrm{~V}, 240 \mathrm{~V}$ or 480 V for 60 Hz applications or 220 V , $380 \mathrm{~V}, 415 \mathrm{~V}, 600 \mathrm{~V}$ for 50 Hz applications.

> Option 51. Surge Protection Device
> Two types of surge protection devices are used in Eaton automatic transfer switches. Both types meet the requirements for UL 1449 3rd Edition for surge suppression devices and are CE marked. The type CVX is used on Eaton wallmount ATS designs and the Eaton
> type SPD are used on floor-standing designs.

## CVX

The CVX device features a Thermally Protected Metal Oxide Varistor technology and comes with high intensity LED phase status indicators.

## SPD

The SPD features a Thermally Protected Metal Oxide Varistor technology. It comes with dual-colored protection status indicators for each phase and for neutral-ground protection mode. It comes with an audible alarm with silence button and a Form C contact.

An optional SPD with surge counter feature package is available. This provides sixdigit surge counter with reset button.

51S1B. 50 kA-SPD standard source 1

51S2B. 80 kA-SPD standard source 1

51S3B. 100 kA—SPD standard source 1

51S4B. 120 kA-SPD standard source 1

51S5B. 160 kA-SPD standard source 1

51S6B. 200 kA-SPD standard source 1

51S7B. 250 kA-SPD standard source 1

51S8B. 300 kA-SPD standard source 1

51S9B. 400 kA—SPD
standard source 1
51S1C. 50 kA-SPD standard with surge counter source 1

Standard and Optional Features

51S2C. 80 kA—SPD standard with surge counter source 1
51S3C. 100 kA-SPD standard with surge counter source 1

51S4C. 120 kA—SPD standard with surge counter source 1
51S5C. 160 kA-SPD
standard with surge counter source 1

51S6C. 200 kA—SPD standard with surge counter source 1

51S7C. 250 kA—SPD
standard with surge counter source 1
51S8C. 300 kA-SPD standard with surge counter source 1

51S9C. 400 kA—SPD
standard with surge counter source 1
51SC8. Remote display panel (8 feet standard)

51SC12. Remote display panel (12 feet)
51SC4. Remote display panel (4 feet)

## 54. Front Access

54A. Front access cabinet available for all Magnum products. This option will add an additional pull section mounted on the side of the switch.

## 54B. Upgrade to 316 Stainless Steel

Provides a stainless enclosure with 316 grade. Contact plant for availability.

55B. Source Swap (Normal Bottom/Emergency Top)
Provides ability to designate the Normal Source to be physically located at the bottom of the structure and the Emergency Source to be at the top of the structure.
Contact plant for availability.
59a. Silver-Plated Bus
Silver-plated bus is a standard feature for all Magnum-based designs.

## 59b. Tin-Plated Bus

Tin-plated bus is available as an option for Magnum-based designs.

## 60. Dedicated Voltage

 Control Power TransformerThe dedicated voltage control power transformer can be selected for 208/240 V systems where an added buffer is preferred between the incoming power and the micro-processor controller's control power input.

## 61A. UPS Device with Terminal Block Input

 Provides a factory mounted and wired UPS sized to provide power to the ATC controller and the bypass isolation logic controller. Inputs to the UPS are wired out to a terminal block.61B. UPS 120 Vac Ready, Terminal Block Input Provides a terminal block input only for customer supplied external mounted UPS that provides power to the logic controller supplied in bypass isolation switches.

## 61C. Power Loss Buffer for ELC

Provides ride-through power for the ELC contained in automatic transfer switches with bypass isolation. This feature does not provide continuous power for microprocessor controller.

61D. UPS 120 Vac Ready, Terminal Block Ready
Provides a terminal block input only for customer supplied external mounted UPS that provides power to the ATC controller.

## 61E. 24 Vdc Ready, Terminal Block Ready

Provides a terminal block input only for customer supplied external 24 Vdc power to the ATC900 controller (requires the DCT Module).

## 61F. Power Loss Buffer ATC Comm (Requires DCT Module)

Provides ride-through power for the ATC-900 controller to maintain communications during a power loss. The power loss buffer provides 24 Vdc to the controller (requires the DCT module).

## 81A. General Alarm Contact (OUTPUT)

Provides a remote indication that an alarm condition exists on the ATC-900. Remains on until all alarms are resolved and reset at the controller.

## 81B. ATS Not in Automatic (OUTPUT)

Provides remote indication that the ATS is not in automatic mode.

## 81C. ATS in Test (OUTPUT)

Provides remote indication that the ATS is currently running a test. The test could be initiated by the device panel engine test pushbutton or automatically using the programmed engine exerciser.

## 81D. Engine Test Aborted (OUTPUT)

Provides remote indication that an engine test has been aborted. The ATC-900 event log contains detailed event information that can help assess the reason the test was aborted.

## 81E. Cooldown in Process (OUTPUT)

Provides remote indication that an engine cooldown is in progress.

## 81F. Engine Start Contact

 Status (OUTPUT)Provides remote indication that the engine start contact is calling for the generator to start.

81G. LOAD SHED S2 Inhibit On (OUTPUT) Provides remote indication that the emergency inhibit is on.

81GL. LOAD SHED S2 Inhibit On with White Indicating Light
Provides a 30 mm pilot light on the transfer switch device panel to indicate that S2 Inhibit is on.
81H. ATS on Bypass (OUTPUT)
Provides remote indication that the bypass switch is carrying the load.

## 81J. Lockout

Provides an input to temporarily disable automatic control. This feature is used to indicate a tripped breaker in a breaker-based transfer switch. It is treated as an alarm and the alarm must be reset to continue automatic operation.

## 81K. Monitor Mode

Provides an input to disable automatic control in the ATC900 controller. This function is used for when manual operation is required. The controller continues to accurately monitor source status and set points can be changed; however, no action will be initiated by the controller.

## 81L. Remote Load Test

Provides an input to initiate a system test using a remote contact closure. The test will run based on the programmed engine test settings in the controller. The settings include with or without load, engine run time, and independent test time delays.

## 81M. Load Bank Control (OUTPUT)

Provides a remote output to disconnect a load bank if Source 1 fails while the load bank is running. The load bank control output is turned on when an unloaded engine test is in process and the load is connected to the source that is not under test. It is off at all other times. If, while an engine test is in process, the non-test source fails (i.e., Source 1), the test is aborted, which will cause load bank control relay to turn off in anticipation of transferring load to the generator.

## 81N. Health (OUTPUT)

Provides a remote indication that an alarm condition or loss of control power exists on the ATC-900. Remains on until an alarm condition occurs or control power is lost.

## 90A. Master Control (OUTPUT)

Provides the user with the ability to use two independent transfer switches in three source systems consisting of a utility and two generator sources. In a three-source system, the Master ATS controls the engine starting and stopping of the Slave ATS. The slave input receives the engine start signal from the Master controller.

## 90B. Slave Input (INPUT)

The ATC-900 Master/Slave controller functionality provides the user with the ability to use two independent transfer switches in three source systems consisting of a utility and two generator sources. In a three-source system, the Master ATS controls the engine starting and stopping of the Slave ATS. The slave input receives the engine start signal from the Master controller.

## Glossary

With respect to their use in this document and as they relate to switch operation, the following terminology is defined:

Available-A source is defined as "available" when it is within its undervoltage/ overvoltage/underfrequency/ overfrequency (if applicable) set point ranges for the nominal voltage and frequency setting.
Fail-safe-A feature that prevents disconnection from the only available source and will also force a transfer or retransfer operation to the only available source.

Retransfer-Retransfer is defined as a change of the load connection from the secondary to primary source.

Source 1-is the primary source or normal source or normal power source or normal. (Except when Source 2 has been designated the "Preferred Source.")

Source 2-is the secondary source or emergency source or emergency power source or emergency or standby or backup source. (Except when Source 2 has been designated the "Preferred Source.")

Source 1—Failed or failsSource 1 is defined as "failed" when it is outside of its undervoltage or overvoltage or underfrequency or overfrequency (if applicable) set point ranges for the nominal voltage and frequency setting.
Source 2-Failed or failsSource 2 is defined as "failed" when it is outside of its undervoltage or overvoltage or underfrequency or overfrequency (if applicable) set point ranges for the nominal voltage and frequency setting for a time exceeding 0.5 seconds after the time delay emergency fail (TDEF) time delay expires.

Transfer-"Transfer" is defined as a change of the load connection from the primary to secondary source except when specifically used as "Transfer to Neutral."

## Transfer to Neutral-

"Transfer to Neutral" is defined as when the load circuits are disconnected from both Source 1 and Source 2.

## Transient Voltage Surge Suppression

Eaton's Clipper Power System -Visor ${ }^{\text {TM }}$ series transient voltage surge suppression (TVSS) components can be integrated into any closed transition soft load switch. Surge current ratings 100 kA , 160 kA and 200 kA per phase provide a range of costeffective facility-wide protection solutions. Status indication on each phase is standard with any TVSS option. Metering and communication capabilities are also available. See Appendix C for details.

## Communications

Optional communication capability via Communication Gateway is available, allowing remote data access, control, programming, system interface and dispatch.

## System Interface

A system control panel provides a user-friendly interface to the closed transition soft load controller, allowing operators to easily monitor the switching devices position and manually test the generator and the system operations.

## Switching Devices <br> Status Lights

- Source 1 open (green)
- Source 1 closed (red)
- Source 1 trip (amber)
- Source 2 open (green)
- Source 2 closed (red)
- Source 2 trip (amber)

## Front Panel Control Switches and Lights

The combination of the following pilot devices can be implemented on the unit:

- AUTO/TEST switch
- SYSTEM TEST switch
- TEST MODE switch
- ALARM SILENCE switch
- READY FOR OPERATION lamp (white)-verifies the ATC-5000 status

## Optional Intergral Overcurrent Protection Capability

For service entrance applications, Digitrip microprocessor-based trip units can be integrated into the power switching devices. This eliminates the need for the separate upstream protective device, saving installation cost and space. Available with various combinations of long, short, instantaneous and ground fault protection, Digitrips can communicate with Eaton's IMPACC and PowerNet Power Management Systems.

## Optional On-Board 24 Vdc Power Supply

On-board 24 Vdc power supply circuit, consisting of two 12 Vdc gel-cell UPS type batteries and battery charger, is available on the unit to provide DC control power to soft load transfer switch components. Engine battery can be connected in the "best battery" circuit as well, further improving the system's reliability.

## Optional Components <br> Description

| Service Entrance Rating |  |
| :--- | :--- |
| 16 N | Overcurrent protection—normal |
| 16 E | Overcurrent protection-emergency |

Remote Annunciator Controller

## Remote Annunciator Controller

## Product Description

Eaton's HMi remote annunciator controller series provides users with the ability to remotely monitor and control multiple transfer switches from one intuitive, touchscreen user interface.

## Remote Monitoring, Enhanced Safety

Tightening arc-flash regulations and requirements for personal protective equipment are driving more and more end users toward the use of remote monitoring and control devices. Eaton's HMi remote annunciator controller offers a simple and cost-effective means of providing transfer switch monitoring and control.

Designed to meet today's most common specifications, including the City of Chicago Electrical Code, the HM i remote annunciator controller connects to Eaton's ATC$300+$, 600 or 800 controller via Modbus ${ }^{\circledR} 485$ and serves as an extension of the transfer switch controller.

One Product Multiple Advantages
The HMi remote annunciator controller has a multi-view option that allows end users to monitor and control one to four transfer switches. Additional product advantages include the ability to:

- Initiate a transfer to the generator for peak shaving
- Perform a remote test based on programmed engine exerciser set points
- View and silence system alarms
- Perform basic troubleshooting using the source data and alarm history screens

## Features

- Monitors and controls one to four transfer switches
- Mimics bus display for source availability, source position and preferred source monitoring
- Audible alarm with alarm silence option when on source 2
- Remote control features include transfer to source 2, engine test, time delay bypass and alarm silence
- Date- and time-stamped alarm history
- 6-inch color touch-screen display
- User-assignable transfer switch designations
- Compatible with Eaton's ATC-300+, ATC-600 and ATC-800 © microprocessor controllers
- Password protection for all control functions
- Modbus 485 communication
- Flush mounted

## Design Highlights

- Uses Eaton's HMi (humanmachine interface) series
- Display type: 6-inch TFT, LED backlight
- NEMA® 4X / IP65
- 24 Vdc operating voltage (power supply optional)
- 85 dB multi-tone-frequency alarm buzzer
- Operating temperature $32^{\circ}$ to $122^{\circ} \mathrm{F}\left(0^{\circ}\right.$ to $\left.50^{\circ} \mathrm{C}\right)$
- Storage temperature $-4^{\circ}$ to $140^{\circ} \mathrm{F}\left(-20^{\circ}\right.$ to $\left.60^{\circ} \mathrm{C}\right)$
- 3 V lithium battery backup (CR2032 x 1)

## ATS Individual Unit Screen

- Monitors source availability, source position indication, alarm status, ATS in test, communication status and ATS in non-automatic mode for a single transfer switch
- Initiates peak shaving and engine tests, bypass time delays (1) and silence audible alarms

## Note

(1) Requires MPONI communication module for use with the ATC-600 or ATC-800 controller

## ATS Multi-Unit Screen (ATC-300+ Only)

- Monitors source availability, source position and alarm status for up to four transfer switches
- Password-protected setup screen for transfer switch designations
- Access to the ATS individual unit home screen

## Source Data Screen

- Monitors values for source 1 and source 2 voltage and frequency

## Alarm Screen

- Monitors all alarm messages with the touch of a button right from the HMi display. Alarm messages include:
- Source 2 closed (audible alarm)
- Overvoltage
- Undervoltage
- Overfrequency
- Plant exerciser
- Engine test
- Remote engine test
- Voltage unbalance ©
- Phase reversal (1)
- Go to emergency
- Lockout
- Failed to sync (phase angle)
- Failed to sync (frequency difference)
- Engine test or plant exerciser
- Source 1 error
- Source 2 error

## Engine Test Screen

- Provides password protected control to start and abort an engine test. The engine test will run according to the controllerprogrammed set points for duration and with or without load
- Provides control to bypass the source 1 to source 2 and source 2 to source 1 time delays

## Go To Emergency Screen (Peak Shaving)

- Provides password protected control to force transfer to source 2 regardless of the condition of source 1 . This feature is failsafe, meaning the ATS will automatically return to source 1 in the event of a source 2 failure
- Provides control to bypass the source 1 to source 2 and source 2 to source 1 time delays

## Note

(1) ATC-300+ controller only.

## Pow-R-Way III Busway

## Product Description

## Superior Housing Design

 and a True Sandwich Design Maximize Busway PerformanceEaton's Pow-R-Way III ${ }^{\oplus}$ is constructed with a lightweight and durable, two-piece, aluminum-extruded housing. The non-ventilated housing design excludes potential points of penetration by moisture or dust. Busbars for plug-in applications have fullsized conductor tabs welded by a fully automated state-of-the-art welding process. This design extends the contact surfaces outside of the busway housing and into the plug-in outlet. The benefits of the true sandwich design for both plug-in and feeder busway include improved coordination and heat dissipation, better bracing and the elimination of the "chimney effect."

## Epoxy Insulation Provides Exceptional Performance

The phase and neutral bars are insulated with Class B, $130^{\circ} \mathrm{C}$, epoxy insulation applied by an automated fluidized bed process. This application insulates the conductors in a precise and controlled manner to ensure smooth, continuous, high quality protection. Following the epoxy insulation process, all contact surfaces are silver-plated to provide an extremely durable connection. Tin-plating is also an option.

## Pow-R-Way III Bridge Joint

 Reduces Installation Time and Provides Flexibility for Future ModificationsPow-R-Way III joint connections are made with the rugged Pow-R-Bridge joint package. A Pow-RBridge is installed on each section of busway prior to shipment. Job site connections are made quickly by releasing the bridge joint bolt, moving the next section into place, and retightening the bolt. Torque-indicating, double-headed bolts with fall-away instruction tags are provided to ensure that proper installation torque is achieved. The Pow-R-Bridge provides an adjustment in section length of up to $\pm 0.5$-inch ( 12.7 mm ) at each joint.

Bridge Joint Assembly

Pow-R-WayIII Offers Grounding and Neutral Options to Meet Every Customer Preference and Need
The aluminum housing is UL listed as a $50 \%$ integral ground path and is provided as a standard, economical ground system. A 50\% internal ground bar is also available. In certain industrial applications, a ground path greater than 50\% may be required. Pow-R-Way III can solve this problem in a costefficient manner through combining the 50\% integral housing ground with the $50 \%$ internal ground. To meet the growing demand for grounding isolation, Pow-R-Way III also offers a $50 \%$ isolated ground bar. When customers are concerned about harmonics and overheating generated by nonlinear loads, Pow-RWay III provides a solution through a fully rated 200\% capacity neutral bar.

Joint End

A Space-Saving InnovationThe Corner Joint Elbow

The Pow-R-Way III corner joint combines the features of the Pow-R-Bridge with reduced elbow leg lengths. Due to its compact design, the corner joint allows for layouts that provide optimum use of space and increases available plug-in openings.

Straight Lengths

## A Complete Line of Fittings for Indoor and Outdoor Applications

Pow-R-Way III offers an extensive range of fittings to meet every application need. Flanges, elbows, end cable tap boxes and end closers are used in basic busway routing. For more complex layouts, combination elbows and offsets can be used along with transformer throats vault flanges, reducers and expansion joints

Dutdoor Joint Assembly

Plug-In Unit

Upward Elbow

## Enhanced Bus Plug Design

 Facilitates Installation and Improves SafetyPow-R-Way III plug-in protective devices are available in circuit breaker and fusible switch designs. Standard features include: oversized enclosures, extended ground and neutral bars, line side barriers, bus plug alignment pin, busway interlock and improved clamp and guides.

Advanced bus plugs provide protection, communication and coordination capabilities using the Visor ${ }^{\text {TM }}$ Series (SPD), Energy Sentinel ${ }^{\text {TM }}$, Digitrip ${ }^{\text {TM }}$ IQ OPTIM ${ }^{\text {TM }}$, Advantage ${ }^{\text {TM }}$ motor control components and receptacle plugs.

Final Busway Assembly

Rearward Corner Joint Assembly

High 6-Cycle Short-Circuit Ratings Optimize Coordination Between Busway and Power Equipment and Meet High Quality Standards
All ratings of Pow-R-Way III have been tested to 6-cycle standards and have achieved a minimum rating of 85 kA and a maximum rating of 200 kA rms symmetrical

Typical Busway Installation (Torque Indicating Bolt)

Low Voltage Busway
Pow-R-Way III

## General Information

- Determine the total footage, all fittings and accessories for entire busway run. Price the total footage by type and system requirements. Round footage up to the nearest foot. Add the fabrication charge for the fittings. Add any additional accessories required for the total price of the busway run
- See NEC 364.11 for Reducer Application
- Fusible reducers are 600 V maximum; fuses are not included

## Transformer Connections

- Transformer tap bus extensions do not include drilling or lugs
- Transformer throats include flexible connectors

## Commercial Metering <br> Connections

- For use with 33 MM , 37MM and 37SS meter stack modules; order separately
- Main breaker units include circuit breaker and trip units
- 1200 A or greater main devices must be center fed when installing 800 A residential meter sockets and 1200 A commercial meter sockets
- Spacer kit 3MMBSK may be required when stacks are mounted on right-hand side in EUSERC areas
- Class T fuse clips only; fuses not included
- Compatible with indoor corner elbow accessory 3MMEB12 and 3MMEB16
- In-line metering PTO with no overcurrent protection should only be used with six meter sockets/tenant main circuit breakers or less, or applied per local code

## Plug-In

- Straight sections of plug-in busway are available in $2 \mathrm{ft}(0.6 \mathrm{~m})$ increments from $2 \mathrm{ft}(0.6 \mathrm{~m})$ minimum to $10 \mathrm{ft}(3 \mathrm{~m})$ maximum. Pow-R-Bridge joint is included

## Sprinkler-Proof Plug-In

- For sprinkler-proof plug-in, multiply the plug-in price by 1.15 and use outdoor pricing for the feeder busway

## Feeder

- Straight sections of feeder busway are available in $1 / 8$-inch ( 3.2 mm ) increments from 16 inches $(406 \mathrm{~mm})$ minimum to $10 \mathrm{ft}(3 \mathrm{~m})$ maximum. Pow-R-Bridge joint is included. Busway must carry at least a $50 \%$ load in all outdoor applications

## Hangers/Pow-R-Bridge

- The busway price includes one horizontal hanger per $10 \mathrm{ft}(3 \mathrm{~m})$ of busway and one Pow-R-Bridge joint per connection. All vertical hangers and any additional horizontal hangers should be added to the total price

## Ground

- A $50 \%$ integral housing ground is provided as standard. The housing ground can be used in combination with the internal ground or the isolated ground to achieve a $100 \%$ ground rating

## Standard and Flush Flanges

Flanges provide a direct connection to low voltage switchgear, switchboards, motor control centers and other apparatus. Cutout dimensions and drilling plans are provided with the customer drawings, and it is the responsibility of the switchgear manufacturer to provide the opening, flange drillings, connecting hardware and bus risers in their equipment. For proper coordination between busway and other equipment, detailed drawings, including switchgear orientation, must accompany the order. A standard flange can be supplied to the left or right of a section, as required. A flush flange is used when the busway must lay close to the top of a switchboard. The edge of the busway is 1.25 of the switchboard.

## Elbow Flanges

An elbow flange is a combination of a standard elbow and a standard flange fabricated into a single fitting. Elbow flanges are typically used when the minimum leg lengths for either the standard elbow or the standard flange cannot be maintained.

## Traditional Indoor and Outdoor Elbows

Elbows are used to make $90^{\circ}$ changes in the direction of busway runs. The four types that are available are forward, rearward, upward and downward.

## Corner Joint Elbows

The Pow-R-Way III corner joint elbow can be installed in areas where a traditional $90^{\circ}$ turn could never have been accomplished before.

Pow-R-Way III corner joint elbows can solve any serious pathway problem and contribute to successful layouts with minimal space requirements. The corner joint elbow is UL listed for indoor applications only and is also certified for seismic withstand capability to worst-case, Zone 4 levels.

For Indoor Use Only

Pow-R-Way III

## Special Angle Elbows

Special angle elbows are traditional elbows that allow the direction of the busway runs to change at angles greater than $90^{\circ}$. They allow easy routing through nontraditional corridors. The four types offered are forward, rearward, upward and downward.

## Tees

A tee is a busway fitting suitable for connection in three directions.

Low Voltage Busway

Pow-R-Way III

## Crosses

A cross is a busway fitting suitable for connection in four directions. It is applied when a bus run must branch off in three directions, all in the same plane.

## End Cable Tap Box

End cable tap boxes are used to feed a run of busway with cable and conduit or where loads served by busway are connected without the need for overcurrent protection.

## Center Cable Tap Box

Center cable tap boxes are used to center feed a run of busway with cable and conduit or where loads served by the busway are connected without the need for overcurrent protection.

## Weatherheads

Weatherheads are used for service entrance connections to busway.

## Vault Flanges

Vault flanges are used to enter a utility vault for termination to the utility transformer. Each vault flange is custom designed to meet each specific utility specification. Vault flanges may look similar to those shown in figure below.

## Expansion Joints

Expansion joints accommodate the expansion and contraction of busbars with respect to the enclosure. They compensate for the difference in the coefficient of expansion of the aluminum housing and the copper or aluminum busbars. Expansion joints must be used wherever a run of busway crosses an expansion joint of a building. They should also be installed in the center of extremely long straight runs of busway; one every $300 \mathrm{ft}(91 \mathrm{~m})$ for copper or one every $225 \mathrm{ft}(68 \mathrm{~m})$ for aluminum.

## Phase Transpositions

Phase transposition fittings are used in applications where a phase rotation is needed due to a change in phasing from the source equipment to the load equipment. Both $90^{\circ}$ and $180^{\circ}$ rotations are possible. In each case, all conductors are rotated.

## Non-Protected Reducers

Non-protected reducers are used to reduce the ampacity of the busway without overcurrent devices. Per NEC Section 364.11, for industrial applications, no overcurrent protection is required where the busway is reduced in size, provided the length of the smaller busway does not extend more than $50 \mathrm{ft}(15.2 \mathrm{~m})$ and has a current rating of at least one-third of the first upstream overcurrent device.

## Protected Reducers

Protected reducers are used to reduce the ampacity of busway using either a circuit breaker or a fused, nonautomatic circuit breaker overprotection device. Both serve as a disconnecting means. The line side of the cubicle is connected to the higher rated busway and the load side is connected to the lower (reduced) rated busway.

## Transformer Throat Connections

A transformer throat is used when making connections to a liquid-filled substation transformer. All transformer throat connections include flexible connectors between the transformer low voltage spades and Pow-R-Way III busbars. For transformers with drilled flanges, the busway will bolt to the transformer throat instead of using a sealing ring.

## Transformer Flange Connections

Transformer flange
connections are used when making a connection to a dry-type substation transformer. Transformer flange connections include flexible connectors between the transformer low voltage spades and the Pow-R-Way III flange busbars.

Single-Phase Transformer Taps
Single-phase transformer taps arrangements are used for connections to three single-phase transformers. The bus extensions do not include drilling or lugs.

## In-Line Power Takeoff

 Main Circuit Breaker PTOThe in-line main circuit breaker PTO shown in figure to the left is available with trip ratings from 300 A up to 1200 A ; using L-, M- and N -Frame circuit breakers. This device is indoor rated and may be sprinkler-proofed upon request.

Main Fusible Switch PTO
The in-line main fusible switch PTO shown in figure to the left is available with 400, 600 and 800 A switches; using Class "T" fuses. This device is indoor rated only. The switch handle is mounted in front, eliminating interference with the meter sockets and the need for spacers between the main device and the meter stack. It comes with a hinged door, giving easy access to the fuses mounted below the main switch.

## Unprotected PTO

The in-line PTO with no main device shown in figure to the left comes with 1200 A horizontal cross bus as standard. This device is intended for use with six or fewer meter sockets, or as local code permits.

## Offsets

An offset is used to avoid obstacles and to conform to the building's structure. It is two elbows fabricated into a single fitting for use where space restrictions prohibit the use of two standard $90^{\circ}$ elbows.

Low Voltage Busway
Pow-R-Way III

## Pow-R-Way III Adapters

A complete line of adapters are available to enable the user to add to existing old-line Westinghouse ${ }^{\circledR}$ or obsolete Cutler-Hammer ${ }^{\circledR}$ bus runs with the Pow-R-Way III design. The specific Westinghouse product lines are low impedance busway, current-limiting busway, Pow-R-Way and Pow-R-Way II. The obsolete Cutler-Hammer designs are CP2, CP3 and CP4 Safetybus.

The adapters allow the incorporation of presentday technologies, available in Pow-R-Way III plug-in units, into existing busway systems. State-of-the-art features such as energy monitoring, transient voltage surge suppression and coordination/communication capabilities can all be added to existing distribution systems without having to upgrade and replace entire runs of busway.
Special adapters to competitive busway products are also available. Please contact the Greenwood factory for information.

## Power Where You Need it!

As a leader in providing quality, robust, cutting-edge electrical distribution equipment, Eaton understands the importance of providing usable power access in a variety of applications. Eaton's Pow-RWay III busway continues to offer electrical distribution solutions that are flexible and without limitations, and are energy efficient, saving time and money.

## Pow-R-Way III Receptacle Plug-In Units

Eaton now offers a full line of receptacle plug-in units for use on Pow-R-Way III busway. Pow-R-Way III receptacle plug-in units come fully assembled and wired, reducing installation time. They are UL listed and offer a complementary line of accessories. Eaton's unique design makes them the most flexible receptacle units in the industry.

Data Centers-Data racks continue to process more information at higher speeds with constantly changing demands. Pow-R-Way III receptacle plugs offer the highest ampere ratings in the industry. Busway and receptacle plugs above the data racks provide faster installation, faster connectivity, easier rack changes and upgrades, and will run cooler than traditional cable methods.

Retail—As retail environments change meeting customer demands, Pow-R-Way III busway and receptacle plugs help make floor layout and display changes easier. Receptacle plugs allow for easy power access, eliminating costly conduit and cable work.

## Schools and Laboratories-

 Pow-R-Way III receptacle plugs offer safe power access for instrumentation and other lab equipment at the point of use.
## Machine Shops-

Pow-R-Way III busway and receptacle plugs offer quick power connection for shop equipment and make it easy to change shop layouts as demands change.
Light Industrial-Pow-R-Way III busway and receptacle plugs help make manufacturing and assembly lines more flexible. Receptacle plugs bring easy power access for tools and equipment being used on the lines.

For application and layout assistance, and for additional information, please contact your local Eaton sales office or Eaton authorized distributor.

## Fused Duplex Receptacle Plug-In Unit

These units allow you to quickly add standard receptacle power and come with the following features:

- Two fix-mounted NEMA 5-20R or L5-20R duplex receptacles
- Fuse protection for each duplex receptacle
- 120 V maximum, single-phase

Fix-Mounted Duplex Receptacle

## Single Receptacle Plug-In Unit

These units are configured to order based upon the type and size of receptacle ordered, and offer the following features:

- One single or duplex receptacle. Straight blade or twist lock, 5-30 A
- 240 V maximum, single-phase
- Type CH single-pole or two-pole circuit breaker protection
- Receptacles can be fixmounted or cord-mounted
- Cord lengths are 1-25 feet in 1 -foot increments

Fix-Mounted Single Receptacle

Cord-Mounted Single Receptacle

Not all SPD units on the market have filtering capabilities. The benefits of combining SPD and filtering are reduced MOV stress, resulting in a longer life cycle, lower let-through voltage, better noise attenuation levels and increased reliability.

Without protection devices, electronic-based loads and microprocessors are not provided with the noise- and disturbance-free power that they require. Because microprocessors are now common in those facilities, specifiers must ensure that the AC power supply is properly filtered. Significant performance advantages are achieved by integrating SPD filters into busway systems. Because the SPD unit is directly connected to the busway it is able to minimize let-through voltage and to isolate critical loads that are fed from a protected busway run. Due to the integrated design, the SPD bus plug saves the user-needed wall space and greatly reduces the installed project cost. The SPD bus plug is furnished with a breaker disconnect.

## IO Energy Sentinel Bus Plugs

The IQ Energy Sentinel is a UL listed microprocessor-based metering module capable of communicating energy usage and demand values over Eaton's PowerNet ${ }^{\text {TM }}$ power monitoring network. These innovative submetering devices are designed to mount-directly to Series C® molded-case breakers through 400 A and are available for universal mounting through 2500 A .

It offers a centralized alternative to individually mounted wattmeters, watthour meters and watt-demand meters. Key advantages include unmatched savings in space, lower installation costs, and the capability to communicate data readings in a variety of ways. IQ Energy Sentinels with built-in CTs and communication capability have the added benefit of overall system accuracy. The Energy Sentinel mounts on the load side of Eaton F-, J- and K-Frame breakers within the bus plug enclosure. The Energy Sentinel is also available for fusible plug-in units, which use external CTs within the plug-in enclosure.

Submetering application examples for the Energy Sentinel include energy monitoring and demand management, energy cost analysis/allocation and tenant or interdepartmental billing.

To accomplish the communication system, the customer must provide a twisted pair communication cable in 1/2-inch (12.7 mm) conduit connecting the IO Energy Sentinel to an Eaton Central Energy Display (CED) or a customer PC to display and collect the information.

The IO Energy Sentinel offers the user full energy monitoring capability in a compact, cost-effective module ideally suited to busway application.

6.1<br>Low Voltage Busway<br>Pow-R-Way III

## Ground Detector/Neutralizer Bus Plug

In rare cases, busbars in a busway system pick up static electricity. In order to discharge this potential, a neutralizer and a ground detector bus plug is available. The unit has three 18,000 ohm resistors connected between the busbars and the ground. Static electricity is discharged through these resistors.

A neon lamp is wired in series with the busbar and part of the resistor and burns continuously. If there is a ground anywhere on the system of a lower resistance than the path through the lamp, the lamp will go out, indicating that there is a short in the system.

## Combination Starter Bus Plugs

Eaton's Freedom ${ }^{\text {TM }}$ and Advantage ${ }^{\text {TM }}$ motor starters are included in the Pow-RWay III bus plug product offering. Freedom motor starters offer state-of-the-art features that ensure greater value, flexibility and performance in the toughest commercial and industrial applications.

Advantage motor starters have features including a solid-state, heaterless overload relay with built-in ground fault protection. Advantage also features communication capabilities and an on-board micro-
processor that controls the contactor magnet to eliminate burnout in low voltage or varying control circuit conditions.

Plug-in combination starters or contactors are mounted in enclosures identical to the circuit breaker and fusible switch type bus plugs including the clamp and guides, safety interlocks and guide pin. They are available from size 0 through 5 with a circuit breaker, motor circuit protector or fusible disconnect. Contact Eaton for specific application and outline dimensions.

## Pow-R-Way III Express Bus

Eaton continues to be a leader in providing service and product solutions to its customers. When you need a complete run of busway fast to get critical electrical loads running or meet time-
sensitive deadlines, Express Bus is the solution.

## Product Offering

- Indoor plug-in busway:
- 800-2500 A copper and 800-2000 A aluminum
- Indoor feeder busway:
- 800-2500 A copper and 800-2000 A aluminum
- Corner joints:
- Forward (right)
- Rearward (left)
- Upward
- Downward
- Tap boxes:
- End tap box
- Plug-in tap box
- Bus plugs:
- Fusible
- Circuit breaker
- Accessories:
- End closer
- Wall/floor flange
- Hangers

## Program Highlights

Eaton will ship 12 total pieces of busway in 5 working days or 24 total pieces in 10 working days after receipt of released order. Total pieces are inclusive of end tap boxes and corner joints.
For pricing, special requests or needs, please contact your local Eaton sale office.

Plug-in units and additional hangers are stocked and available in the warehouse.

## How the Program Works

By using the form provided, it's quick and as easy as 1-2-3.

1. Write in the catalog numbers and quantities of the pieces needed.
2. Write in and extend the pricing. Obtain net multipliers from your local sales office.
3. Fax in the order sheet with a copy of your purchase order.
Once received, your order will be entered in the system and shipped within 5 to 10 working days based upon the number of pieces ordered.
Feeder and plug-in indoor busway with copper conductors are available in 10 -feet and 6 -feet lengths. They can be used interchangeably without the use of special adapters or special splice plates, provided they are the same current and system rating.
Pow-R-Way III is constructed with a lightweight and rugged, two-piece allaluminum extruded housing, which is rated as a $50 \%$ ground path.
Copper busbars for plug-in applications have full-sized conductor tabs welded to their side edges to form the plug-in contact surfaces. Tabs are the same exact thickness as the conductors and are fully rated up to 800 A .

## Corner Joint Elbows

When it comes to bends and turns in a bus run, the Pow-R-Way III corner joint is the most compact elbow in the industry. Given the complexity of today's industrial and commercial distribution systems and the need to coordinate layouts with HVAC, plumbing and lighting requirements, space quickly becomes a critical factor.
The Pow-R-Way III corner joint elbow can be installed in areas where traditional 90 -degree elbows could never have been accomplished before.
Due to its compact design, the corner joint also allows for layouts that provide optimum utilization of space. Critical section length that would normally be required for a traditional elbow leg length can now be dedicated to maximizing usable plug-in section length.

The corner joint is as reliable as traditional elbows. It is seismic certified and exceeds the requirements of both the UBC and CBC (Zone 4). The corner joint is UL listed for indoor applications.

Corner Joint Elbows

## Fittings and Accessories

End cable tap boxes are available for all ratings in the Express Bus program. One horizontal hanger will be included for every 10 feet of busway. Please specify
flatwise or edgewise.

Pow-R-Bridge Assembly

Plug-In and Feeder Busway

## Features, Benefits and Functions

Pow-R-Way III Offers a Full Line of Low Voltage Busway to Meet the Needs of the Global Marketplace
Eaton has combined the requirements of NEMA, UL, CSA and IEC into one design to present a world-class product in Pow-R-Way III. With standard features that include a two-piece aluminum housing, finger-safe plug-in outlets, an integral ground path and high 6-cycle shortcircuit withstand ratings, Pow-R-Way III provides a busway system that can be used over a broad spectrum of industrial, commercial and institutional applications worldwide.

## Product Offering

- Plug-In Busway 225-5000 A copper and 225-4000 A aluminum straight sections of plug-in busway are available in $2 \mathrm{ft}(0.6 \mathrm{~m})$ incremental lengths from a $2 \mathrm{ft}(0.6 \mathrm{~m})$ minimum to $10 \mathrm{ft}(3 \mathrm{~m})$ maximum. Plug-in busway is also available as sprinkler proof
- Feeder Busway 225-5000 A copper and 225-4000 A aluminum straight sections of indoor and outdoor feeder busway available in any length in $1 / 8$-inch ( 3.2 mm ) increments from a 16 -inch $(406 \mathrm{~mm})$ minimum to a 10-foot ( 3 m ) maximum. A wide range of fittings are available in indoor sprinkler-proof, or outdoor feeder busway
- Plug-In Units

A full family of busway plug-in units is available. Standard plug-in units include fusible or circuit breaker protection. Advanced plug-in units include Visor Series surge suppression, communicating IO Energy Sentinel and OPTIM circuit breakers, and Advantage combination contactors and starters. A full line of receptacle plug-in units are available

## Product Features and Benefits

- The all-aluminum twopiece housing provides durability and product integrity
- The lightweight and compact design results in easy installation
- The housing combined with a true sandwich design in both plug-in and feeder busway contributes to improve coordination and high short-circuit ratings
- An epoxy insulation process ensures optimum conductor and system protection
- Silver-plated joint and contact surfaces provide high-quality connections
- Highly automated manufacturing processes result in a superior product
- The Pow-R-Bridge joint package and torque indicating bolt gives a rugged, yet flexible and easy-to-install connection
- Corner joint elbows contribute to successful layouts and minimize space limitations
- High 6-cycle shortcircuit ratings optimize coordination between busway and power equipment
- This world-class product design and manufacturing meets the requirements of NEMA, CSA, Seismic and ISO ${ }^{\circledR}$ and IEEE ${ }^{\circledR}$
- Plug-in busway design and an enhanced bus plug-in unit facilitates installation and improves safety
- Flexible ground and neutral options provide solutions for any application problem
- A full family of plug-in units is available for every power need
- Advanced bus plugs provide protection, communication and coordination capabilities

## Busway Capabilities

- The busway manufacturing plant in Greenwood, SC, is able to meet your emergency or quick ship requirements with quick ship lead-times from 3 days to 2 weeks
- Customer approval drawings can be available in 2 weeks or less to meet your project requirements
- Eaton's final field fit program ensures accurate layout and allows for minor last-minute modifications during installation
- Advanced system tools including Bid Manager ${ }^{\text {TM }}$ programs provide quick and accurate product information

## Standards and Certifications

- Pow-R-Way III meets the requirements of NEMA, UL 857, CSA C22.2 No. 2794, IEEE, ANSI, IEC 439-1 and 2 , IEC 529 and is manufactured in an ISO 9001 certified facility
- Pow-R-Way III meets the International Building Code standards and is certified in the Uniform Building Code ${ }^{\circledR}$ and the California Building Code to exceed Zone 4 requirements
- ANSI, NEMA, IEEE, CSA, UL 857
- 10 kAIC rms symmetrical
- Fused duplex-40 A maximum
- Single-70 A maximum
- Quad-125 A maximum

## Product Support

Busway product and application support is available from a professional team of Eaton employees that includes field sales engineers, application engineers, engineering service systems and the greenwood busway product engineering services.

## Additional Programs

Final Field Fit-This program was established to effectively manage the dimensional uncertainties that are often inherent in bus duct layouts. This program provides the assurance of an exact fit the first time. It allows for bus duct runs to be released for manufacture when certain dimensions are not yet determined. It also eliminates the costly delays that can occur when sections have to be remade in order to accommodate last-minute job site changes in routing. For program details, please see publication SA01702001E.

Field Measurements-
For larger and more complex projects, Eaton will provide factory assistance with taking busway layout measurements. We will take full accountability of all measurements and will ensure an exact fit. Contact your local Eaton sales office for pricing and availability.

- Factory assembled; refer to Eaton's busway for delivery
- Bolt-on units require a power take-off at the rating of the busway
- If neutral and ground are required, order by description with bolt-on unit
- Housing ground connection supplied as standard

Ground Detector Neutralizer Plug (Three-Wire)

| Maximum Voltage | Catalog Number |
| :--- | :--- |
| 600 | P3GND |

## Technical Data and Specifications

## Ratings

A. The busway shall be Eaton's type Pow-R-Way III: [threephase, three-wire] [threephase, three-wire with 50\% housing ground and/or 50\% internal ground] [three-phase, three-wire with 50\% housing ground and/or 50\% isolated ground] three-phase, four-wire with 100\% neutral] [three-phase, four-wire with 100\% neutral, 50\% housing and/or 50\% internal ground] [threephase, four-wire with 100\% neutral, 50\% housing and/or 50\% isolated ground] [threephase, four-wire with 200\% neutral] [threephase, four-wire with 200\% neutral, 50\% housing ground, and/or 50\% internal ground] [three-phase, four-wire with $200 \%$ neutral, $50 \%$ housing ground, and/or $50 \%$ isolated ground] with voltage and current ratings as indicated on the contract drawings.
B. The busway shall have a minimum of 6-cycle short-circuit rating of 85 kA rms symmetrical for ratings through 800 A, 100 kA rms symmetrical for ratings through 1350 A, 125 kA rms symmetrical for ratings through 1600 A , 150 kA rms symmetrical for ratings through 2500 A, and 200 kA rms symmetrical for ratings through 5000 A.

## Construction

A. The busway and associated fittings shall consist of [aluminum] [copper] conductors totally enclosed in a twopiece extruded aluminum housing. Outdoor feeder, indoor feeder and indoor plug-in busway shall be interchangeable at the same rating without the use of adapters or special splice plates. Fittings-such as elbows, tees, flanges, etc.-shall be identical for use with both the plug-in and feeder types of busway. The busway shall be capable of being mounted flatwise, edgewise or vertically without derating. The busway shall consist of standard $10 \mathrm{ft}(3 \mathrm{~m})$ sections with special sections and fittings provided to suit the installation. Horizontal runs shall be suitable for hanging on $10 \mathrm{ft}(3 \mathrm{~m})$ maximum centers. Vertical runs shall be suitable for mounting on $16 \mathrm{ft}(4 \mathrm{~m})$ maximum centers. Provide one hanger for every 10 ft (3 m) of horizontally mounted duct. On vertical runs, provide one adjustable hanger per floor.

## Bus

A. Busbars shall be fabricated from high strength, [57\% conductivity aluminum] [99\% conductivity copper] and suitably plated at all electrical contact surfaces.
B. Busbars shall be insulated over their entire length, except at joints and contact surfaces, with a ULlisted insulating material consisting of epoxy applied by fluidized bed process. Tape or heatshrink sleeve insulation, or any other method of insulation that can allow air gaps or insulation breakdown, shall not be acceptable.
C. The busway shall be capable of carrying rated current continuously without exceeding a temperature rise of $55^{\circ} \mathrm{C}$ based on a $40^{\circ} \mathrm{C}$ ambient.

## Bus Joints

A. Each busway section shall be furnished complete with joint hardware and covers. The busway joints shall be a single-bolt, nonrotating, removable bridge design. All bridge joints shall be furnished with torque-indicating double-head joint bolts and Belleville washers. The bridge joint shall utilize a captive nut retainer on the opposite side of the torque indicating bolt. The bridge joint design shall ensure proper installation without the use of a torque wrench, and provide visual indication that the joint is properly torqued. Each busway joint shall allow for a minimum length adjustment of $\pm 0.5$ inches ( 12.7 mm ). De-energization of busway shall not be required for safe testing of joint tightness.

## Housing

A. The busway housing shall be a two-piece design fabricated from extruded aluminum. The two-piece housing shall be bolted together along the bottom flange. The busway enclosure finish shall be ANSI 61 gray baked epoxy powder paint applied by an electrostatic process.
B. Outdoor feeder busway housing shall be identical to indoor feeder busway housings, and shall be UL listed for outdoor use.

## Plug-In Busway

A. Where required, busway shall be of the plug-in type. Plug-in busway shall be available in standard 2-, 4-, 6-, 8and 10-foot lengths, with plug-in openings provided on both sides of the busway sections on $2 \mathrm{ft}(0.6 \mathrm{~m})$ centers. Plug-in covers shall prevent dirt and debris from entering contact plug-in openings in the busway. The design shall allow for 10 hinged cover outlets per $10 \mathrm{ft}(3 \mathrm{~m})$ of plug-in length. Covers for plug-in openings shall have a positive screw close feature and provisions for the installation of power company seals. The contact surfaces for bus plug stabs shall be silver-plated of the same material, thickness and rating as the stab bars. The stabs shall be welded to the busbars. A standard housing ground connection shall be supplied in each plug-in opening. Positive mechanical guides for plug-in units shall be provided at each plug-in opening to facilitate unit alignment and prevent improper installation.
B. Where required, plug-in units of the types and ratings indicated on the plans and specifications shall be supplied. Plug-in units shall be mechanically interlocked with the busway housing to prevent their installation or removal when the switch is in the ON position. The enclosure of any plug-in unit shall make positive ground connection to the duct housing before the stabs make contact with the busbars. All plug-in units shall be equipped with a defeatable interlock to prevent the cover from being opened while the switch is in the ON position and prevent accidental closing of the switch while the cover is open. The plugs shall be provided with a means for padlocking the cover closed and padlocking the disconnect device in the OFF position. The operating handle and mechanism shall remain in control of the disconnect device at all times, permitting its easy operation from the floor by means of a hookstick or chain. For safety reasons, no projections shall extend into the busway housing other than the plug-in stabs. All plug-in units shall be interchangeable without alteration or moderation of plug-in duct.
C. Fusible-type plugs shall have a quick-make/quickbreak disconnect switch and positive pressure fuse clips.
-OR-
C. Circuit-breaker-type plugs shall have an interrupting rating of not less than symmetrical rms amperes or be series rated as otherwise shown in the contract document and shall meet all requirements of UL Standard 489. It shall be possible to increase the interrupting rating of a breaker plug-in device having ampere ratings through 400 A up to 100 kAIC at 480 Vac and 200 kAIC at 240 Vac by changing out the circuit breaker only and leaving the enclosure intact. All breaker plug-in devices shall be Eaton type Series C.

## Surge Protective Device

A. Provide surge protective device as specified in Section 16671.

## Pow-R-Way III Feeder Busway

- 225-5000 A copper
- 225-4000 A aluminum

Straight sections of feeder busway can be supplied in any length, at $1 / 8$-inch ( 3.2 mm ) increments, from a 16 -inch ( 406.4 mm ) minimum to a $10 \mathrm{ft}(3 \mathrm{~m}$ ) maximum.
Page V2-T6-25 illustrates the configuration of feeder busway and Pow-R-Bridge for the available ampere ratings. See table below for reference to the proper configuration.

## Feeder Busway Configuration

| Ampere Rating <br> UL 857 <br> Cu | AI | IEC 439 <br> Cu | Configuration <br> (see Page V2-T6-25) |
| :--- | :--- | :--- | :--- |
| 225 | 225 | 225 | A |
| 400 | 400 | 400 | A |

| - | 4000 | 5800 | D |
| 5000 |  | D |  |

Each section will include one factory-installed Pow-R-Bridge mounted to the left end of the busway (with the " T " to the top, when viewing the bus from the " $F$ " side). Each Pow-R-Bridge will have a " T " label, which must always match the " T " orientation of the busway. Available in indoor, sprinkler-proof and outdoor ratings. See IEC 60529 IP Ratings table to the left for details.

## Pow-R-Flex Busway

## Product Description

## The Perfect Package for any Low Ampere Application

Eaton's Pow-R-Flex Busway is the perfect package for any low ampere application. From manufacturing facilities and machine shops, to schools or private laboratories, as well as warehouse facilities, and data centers, Pow-R-Flex is the practical solution for applications using 600 A or less. Pow-R-Flex Busway is a 600 V design that uses the latest in extrusion construction for its allaluminum housing. This busway product comes with either aluminum or copper conductors in feeder or plugin type busway. The plug-in openings are shuttered for the ultimate in safety and people protection. With a full line of plug-in units and accessories, Pow-R-Flex Busway will get the job done.

Assembled Plug-In Section

## A Fully Enclosed Aluminum Housing Uses the Latest in Extrusion Construction

Eaton's Pow-R-Flex Busway is constructed with a heavyduty, yet lightweight, "U" shaped aluminum base housing as well as extruded aluminum front covers. Incorporated together, these pieces form a unique hinge design to lock in the front covers. This design allows for clean lines, superior short circuit strength, and an aesthetic look and feel. This all-aluminum package provides excellent heat dissipation and less magnetic flux leakage when compared to steel. This housing design ensures a safe and durable installation that can be protected by either an ANSI 61 or black finish.

Extruded Aluminum Housing

## The Pow-R-Flex Busway Bridge Joint Allows for Flexibility and Easy Future Additions

Pow-R-Flex joint connections are made with the Pow-RBridge joint package, which is shipped installed on one end of each section of busway. A tension indicating SmartBolt ${ }^{\circledR}$ is supplied as standard for Pow-R-Flex Busway. These bolts provide for visual indication of a loose or tensioned state within the joint pack via the color changing window on the bolt heads. The Pow-R-Bridge joint allows for an adjustment of $\pm 0.50$ inch. The nonrotating design allows for a stable, secure connection and easy reinstallation of a removed bridge joint.

Bridge Joint Assembly

## Neutral and Grounding Options to Meet any Low Ampere <br> Application

The aluminum housing of Pow-R-Flex has been designed, manufactured, and listed as a UL rated $50 \%$ integral ground/earth path. A 50\% UL listed internal ground/earth can also be chosen as an option utilizing a separate conductor within the busway assembly. There is also an option for an isolated ground that uses the 50\% internal ground bar and isolates it from the housing throughout the busway system and is UL listed as a $50 \%$ isolated ground path. For 4-wire systems, the neutral conductor is made from the same material as the phase conductors providing $100 \%$ to $200 \%$ neutral capacity on select current ratings.

Joint End

Bus Plugs for Any Application
Pow-R-Flex plug-in protective devices have been designed to meet any low ampere application. Standard circuit breaker plugs are available in a traditional cable out style. Additionally, customized receptacle plugs are available with receptacle or connector options to meet any requirement. These plugs come with one to four devices feeding separate receptacles in an enclosure. Pow-R-Flex plugs and connectors can be ordered in a variety of combinations, cord lengths, and short circuit ratings.

Short-Circuit Ratings -Three-Cycle rms Symmetrical

| Ampere | Plug-In <br> Short- <br> Circuit <br> Rating | Feeder <br> Short- <br> Circuit <br> Rating |
| :--- | :--- | :--- |
| Aluminum |  |  |
| 150 | 22,000 | 22,000 |
| 225 | 35,000 | 35,000 |
| 300 | 35,000 | 35,000 |
| 400 | 42,000 | 42,000 |
| Copper |  |  |
| 225 | 22,000 | 22,000 |
| 400 | 35,000 | 35,000 |
| 500 | 42,000 | 42,000 |
| 600 | 42,000 | 42,000 |

High 3-Cycle Short-Circuit Ratings Optimize Coordination Between Busway and Power Equipment and Meet High Quality Standards
All ratings of Pow-R-Flex have been tested to 3-cycle standards and have achieved a minimum rating of 22 kA and a maximum rating of 42 kA rms symmetrical.

Straight Lengths

## A Full Line of Fittings to Meet

 Any Routing Requirement Pow-R-Flex Busway offers fittings to meet any need or application. End cable tap boxes, elbows, and end closers are all available for the most common runs. For more complex runs, equipment flanges, offsets, phase transpositions, and tees are available to accommodate any routing requirement.

## General Information

Determine the total footage, all fittings, and accessories for the entire busway run. Price the total footage by type and system requirements. Round footage up to the nearest foot. Add the fabrication charge for the fittings. Add any additional accessories required for the total price of the busway run.

## Plug-In

Straight sections of plug-in busway are available in $2 \mathrm{ft}(0.6 \mathrm{~m})$ increments from a $2 \mathrm{ft}(0.6 \mathrm{~m})$ minimum to a $10 \mathrm{ft}(3 \mathrm{~m})$ maximum.

## Feeder

Straight sections of feeder busway are available in 1/2inch ( 12.8 mm ) increments from 24-inch ( 609.6 mm ) minimum to $10-\mathrm{ft}(3 \mathrm{~m})$ maximum. Pow-R-Bridge joint is included.

## Ground

A 50\% integral housing ground is provided as standard. The housing ground can be used in combination with the internal ground or the isolated ground to achieve a $100 \%$ ground rating.

## Traditional Indoor and

 Outdoor ElbowsElbows are used to make $90^{\circ}$ changes in the direction of busway runs. The four types that are available are forward, rearward, upward and downward.

## Tees

A tee is a busway fitting suitable for connection in three directions.

## Wall Flanges

Wall flanges fit around the busway and are designed to close off the wall gap opening around the busway, made to allow the busway to pass through a wall Wall flanges are primarily for cosmetic purposes and do not provide any type of vapor or fire barrier.

## Expansion Joints

Expansion joints
accommodate the expansion and contraction of busbars with respect to the enclosure. They compensate for the difference in the coefficient of expansion of the aluminum housing and the copper or aluminum busbars. Expansion joints must be used wherever a run of busway crosses an expansion joint of a building. They should also be installed in the center of extremely long straight runs of busway; one every $300 \mathrm{ft}(91 \mathrm{~m})$ for copper or one every 225 ft $(68 \mathrm{~m})$ for aluminum.

## Phase Transpositions

Phase transposition fittings are used in applications where a phase rotation is needed due to a change in phasing from the source equipment to the load equipment. There are two types of phase transpositions: 90 degree and 180 degree in both types; all conductors are transposed.

## Vapor-Fire Barriers

Vapor-fire barriers hold a two-hour fire rating and are used to seal the busway internally for penetrations through walls, floors, and other fire-rated penetrations, preventing the passage of flame, noxious gas, smoke, and moisture. The exact location of the wall is required to properly position the barrier within the busway run.

## Features, Benefits and Functions

Pow-R-Flex Offers a Full Line of Low Voltage Busway to Meet all Customer Needs
Eaton has combined the requirements of NEMA, UL and CSA into one design to present a world-class product in Pow-R-Flex. With standard features that include an extruded aluminum housing, mechanical shutters over plug-in outlets, an integral ground path and industryleading 3 -cycle short-circuit withstand ratings, Pow-R-Flex provides a busway system that can be used over a broad spectrum of industrial, commercial and institutional applications worldwide.

## Product Offering

- Plug-In Busway

225-600 A copper and 150-400 A aluminum straight sections of plug-in busway are available in $2 \mathrm{ft}(0.6 \mathrm{~m})$ incremental lengths from a $2 \mathrm{ft}(0.6 \mathrm{~m})$ minimum to $10 \mathrm{ft}(3 \mathrm{~m})$ maximum

- Feeder Busway

225-600 A copper and 150-400 A aluminum straight sections of indoor and outdoor feeder busway available in any length in 1/2-inch ( 12.8 mm ) increments from a 24 -inch $(609.6 \mathrm{~mm}$ ) minimum to a 10-foot ( 3 m ) maximum. Standard plug-in units and a full line of receptacle plug-in units are available with fusible or circuit breaker overcurrent protection. Surge Protection Devices (SPD) are also available

- Plug-In Units

A full family of busway plug-in units is available. Standard plug-in units include fusible or circuit breaker protection. Surge Protection Devices (SPD) and a full line of receptacle plug-in units are available

## Product Features and Benefits

- The all-aluminum extruded housing provides durability and product integrity
- The lightweight and compact design results in easy installation
- Tin or silver-plated joint and contact surfaces provide high-quality connections
- Highly automated manufacturing processes result in a superior product
- The Pow-R-Bridge ${ }^{\text {TM }}$ joint package and torque indicating bolt gives a rugged, yet flexible and easy-to-install connection
- 3-cycle shortcircuit ratings optimize coordination between busway and power equipment
- This world-class product design and manufacturing meets the requirements of NEMA, CSA, Seismic and ISO ${ }^{\circledR}$ and IEEE ${ }^{\circledR}$
- Plug-in busway design and an enhanced bus plug-in unit facilitates installation and improves safety
- Flexible ground and neutral options provide solutions for any application problem
- A full family of plug-in units is available for every power need
- Advanced bus plugs provide protection, communication and coordination capabilities

## Busway Capabilities

- The busway manufacturing plant in Greenwood, SC, is able to meet your emergency or quick ship requirements with quick ship lead-times from 3 to 4 weeks
- Customer approval drawings can be available in 2 weeks or less to meet your project requirements
- Eaton's final field fit program ensures accurate layout and allows for minor last-minute modifications during installation
- Advanced system tools including Bid ManagerTM programs provide quick and accurate product information

## Power Where You Need it!

As a leader in providing quality, robust, cutting-edge electrical distribution equipment, Eaton understands the importance of providing usable power access in a variety of applications. Eaton's Pow-RFlex busway continues to offer electrical distribution solutions that are flexible and without limitations, and are energy efficient, saving time and money.

## Plug-In Unit Overcurrent Protective Devices General Information

A variety of plug-in units have been designed for the Pow-RFlex low-ampere busway to meet multiple applications and a variety of installation conditions. Plug-in unit devices provide easy and flexible access to a building's electrical power system, while providing safe overcurrent protection to equipment and wiring.
All Pow-R-Flex plug-in units are designed with the safety of the installer and user as the key criteria. The following safety features are standard for all fusible and moldedcase circuit breaker plug-in units:

- Each plug-in unit ground stab makes positive contact with the busway ground (integral or internal) before the phase or neutral stabs contact the busbars
- Plug-in unit molded guide tabs are provided in the stab support base. These ensure proper phase alignment and open the busway outlet shutter mechanism
- Line-side barriers are provided over the line-side terminal to help prevent accidental contact with line-side connections
- Each plug-in unit has mounting flanges, which help protect the stab-base assembly and have captive hardware that bolt the unit securely to the busway

## Pow-R-Flex Receptacle

 Plug-In UnitsEaton now offers a full line of receptacle plug-in units for use on Pow-R-Flex busway. Pow-R-Flex receptacle plug-in units are non-serviceable plugs. This means they come fully assembled and wired, reducing installation time. They are UL listed and offer a complementary line of accessories. Eaton's unique design makes them the most flexible receptacle units in the industry.

Data Centers-Data racks continue to process more information at higher speeds with constantly changing demands. Pow-R-Flex receptacle plugs offer the highest short-circuit ratings in the industry. Busway and receptacle plugs above the data racks provide faster installation, faster connectivity, easier rack changes and upgrades, and will run cooler than traditional cable methods.

Retail—As retail environments change meeting customer demands, Pow-R-Flex busway and receptacle plugs help make floor layout and display changes easier. Receptacle plugs allow for easy power access, eliminating costly conduit and cable work.

## Schools and Laboratories-

 Pow-R-Flex receptacle plugs offer safe power access for instrumentation and other lab equipment at the point of use.
## Quad Receptacle Units (600 V Maximum)

The quad receptacle unit shown below is configured to order based upon the receptacle type and rating These units are three-phase and can service single- or three-phase loads up to 600 V maximum ( $120 \mathrm{~V}, 240 \mathrm{~V}, 400 \mathrm{~V}$, $480 \mathrm{~V}, 600 \mathrm{~V}, 208 \mathrm{Y} / 120 \mathrm{~V}$, 400/230 V, 480/277 V, 600/ 347 V). Type F-Frame bolt-on molded-case circuit breakers are used in single-pole, twopole, or three-pole configurations. Each unit comes with up to four receptacles, with the breakers sized per the receptacle rating. Each receptacle can be fixed mounted to the front of the enclosure or cable-mounted to a cord drop coming out of the bottom of the enclosure. See below. Cord drop lengths may be $1-15 \mathrm{ft}$ in $1-\mathrm{ft}$ increments. Consult NEC Sections 368, 400 and 645 for cord drop applications.

Consult NEC Sections 368, 400 and 645 for cord drop applications.

Single Receptacle Unit (Enclosure Mounted)

Single Receptacle Unit (Cord Mounted)

## Double Receptacle Unit (600 V Maximum)

The double receptacle unit shown below is configured to order based upon the receptacle type and rating. These units are three-phase and can service single- or three-phase loads up to 600 V maximum ( $120 \mathrm{~V}, 240 \mathrm{~V}, 400 \mathrm{~V}$, $480 \mathrm{~V}, 600 \mathrm{~V}, 208 \mathrm{Y} / 120 \mathrm{~V}$, 400/230 V, 480/277 V, 600/ 347 V). Type F-Frame bolt-on molded-case circuit breakers are used in single-pole, twopole, or three-pole configurations. Single and double receptacle plugs are also available in our mini plug design, which utilizes either a GHC circuit breaker or a CCP fusible switch in a smaller enclosure. Each unit comes with two receptacles, with the breakers sized per the receptacle rating. Each receptacle is cable mounted to a cord drop coming out of the bottom of the enclosure. See below. Cord drop lengths may be $1-15 \mathrm{ft}$ in $1-\mathrm{ft}$ increments. Consult NEC Sections 368, 400 and 645 for cord drop applications.

## Technical Data and Specifications

## Ratings

A. The busway shall be Eaton type Pow-R-Flex and shall be:

1. 1-phase, 3 -wire with $50 \%$ integral housing ground.
2. 1-phase, 3 -wire with $50 \%$ internal ground bar or $50 \%$ isolated internal ground bar.
3. 3 -phase, 3 -wire with $50 \%$ integral housing ground.
4. 3-phase, 3-wire with $50 \%$ internal ground bar or $50 \%$ isolated internal ground bar.
5. 3-phase, 3-wire with $100 \%$ ground.
6. 3 -phase, 4 -wire with $100 \%$ neutral and $50 \%$ integral housing ground.
7. 3-phase, 4-wire with $100 \%$ neutral and $50 \%$ internal ground bar or $50 \%$ isolated internal ground bar.
B. Copper busway shall have a minimum of 3cycle short-circuit rating of 22 kA rms symmetrical for 225 A ratings, 35 kA rms symmetrical for 400 A ratings, 42 kA rms symmetrical for 500 and 600 A ratings.
C. Aluminum busway shall have a minimum of 3cycle short-circuit rating of 22 kA rms symmetrical for 150 A ratings, 35 kA rms symmetrical for 225 A ratings, 42 kA rms symmetrical for 300 and 400 A ratings.

## Construction

A. The busway and associated fittings shall consist of copper or aluminum conductors totally enclosed in a nonventilated 2-piece extruded aluminum housing. Indoor feeder and indoor plug-in busway shall be interchangeable at the same rating without the use of adapters or special splice plates. Fittings-(elbows, tees, flanges, etc.) shall be identical for use with both the plug-in and feeder types of busway. The busway shall be capable of being mounted flat-wise, edgewise or vertically without derating. The busway shall consist of standard 10 -foot sections with special sections and fittings provided to suit the installation. Horizontal runs shall be suitable for hanging on 10-foot maximum centers. Provide one (1) hanger for every ten (10) feet of horizontally mounted duct.

## Bus

A. Busbars shall be fabricated from high strength, 55\% conductivity aluminum or 98\% conductivity copper and shall be silver-plated at all joint and contact surfaces.
B. The busway shall be capable of carrying rated current continuously without exceeding a temperature rise of $55^{\circ} \mathrm{C}$ based on a $40^{\circ} \mathrm{C}$ ambient.

## Bus Joints

A. Each busway section shall be furnished complete with joint hardware and covers. The busway joints shall be a single-bolt, nonrotating, removable bridge design. All bridge joints shall be furnished with a tension-indicating SmartBolt ${ }^{\circledR}$ and Belleville washer. The bridge joint shall utilize a captive nut retainer on the opposite side of the torqueindicating bolt. The bridge joint design shall ensure proper installation without the use of a torque wrench, and provide visual indication that the joint has been tightened to the proper internal tension. Each busway joint shall allow for a minimum length adjustment of $\pm 0.5$ inches. De-energization of busway shall not be required for safe testing of joint tightness.

## Housing

A. The busway housing shall be a two-piece design fabricated from extruded aluminum. The two-piece housing shall consist of a base channel and interlocking front cover bolted together, along the bottom flange. The busway enclosure finish shall be ANSI 61 gray or black and shall conform to UL requirements.
B. The busway conductors shall be totally enclosed within the housing and shall not require any optional covers to prohibit access to the conductors.

## Plug-In Busway

A. Where required, busway shall be of the plug-in type. Plug-in busway shall be available in standard 2-, 4-, 6-, 8- and 10-foot lengths, with plug-in openings provided on one side of the busway sections on 12-inch centers. The plug-in openings shall not have hinged or removable covers and shall have an integral shutter that slides open when a plug-in unit is being inserted. The integral shutter mechanism shall prohibit dirt and debris from entering contact plug-in openings in the busway. The design shall allow for nine (9) plug-in opening outlets per ten (10) feet of plug-in length. The integral shutter mechanism for plug-in openings shall have a positive screw close feature that prevents the shutter from being opened when the plug-in opening is not being utilized by a plug-in unit. A standard housing ground connection shall be supplied in each plugin opening. Positive mechanical guides for plug-in units shall be provided at each plug-in opening to facilitate unit alignment, engage shutter mechanism and prevent improper installation.
C. Receptacle type plugs shall have fused or circuit breaker over-current protection. Circuit breakers shall be plug-on or bolt-on type with an interrupting rating of 10 kA or 22 kA threephase at $240 \mathrm{~V}, 25 \mathrm{kA}$ single-phase at 240 V , 10 kA at 400 V and 480 V and 10 kA at 600 V . Fused switches will have an interrupting rating that matches that of the busway it is attached to, and shall limit the letthrough current from the plug through the receptacle to less than 10 kA IR. All fault current ratings shall be symmetrical rms amperes. Circuit breakers and fusible switches shall be from the same manufacturer as the busway.
Receptacles shall be UL listed, any standard NEMA configuration and either bolted to the enclosure or affixed to an electrical cord dropped down from the enclosure. Cord drops shall use UL listed strain relief devices. Receptacle type plugs shall come fully assembled and wired from the manufacturer. Field kits for drop cords and receptacles shall not be acceptable. For fault current ratings above 22 kA at 240 V or 10 kA at 400 V and/or 480 V , the connector/receptacle and breaker combination must be tested to UL 231 and UL approved.

## Surge Protective Devices

A. Provide surge protective devices as specified in Section 16671A.

## End Cap Tap Boxes

A. End cable tap boxes shall be configured to accept up to (2) 350 kcmil cables per phase and shall conform to UL 857 and NEC standards for wire bend space. Left and right side removable covers shall be provided for easy cable access. Lug access covers shall be provided for easy access to cable termination lugs. Cable tab boxes shall be mountable against a wall without causing the busway to be offset from the wall.
B. End cable tap boxes shall allow for CTs to be mounted within the tap box for metering.

## Busway Whole Run Metering

A. An electronic power meter equivalent to an Eaton IO250/260 electronic power meter shall be use to monitor power utilization for each busway run and shall be mounted in a separate enclosure bolted to each end cable tap box
B. The electron power meter shall have a digital display showing real-time information about critical power parameters for each phase. Each phase shall be visible on the display simultaneously.
C. The electronic power meter shall comply with ANSI C12.20 for power utilization and quality with an accuracy of 0.2 percent.
D. The electronic power meter shall be capable of monitoring the following parameters for each phase: current, current demand, neutral current, voltage, frequency; real, reactive and apparent power, total and per ohase: power factor, total and per phase; and minimum and maximum readings for each parameter.
E. The electronic power meter shall communicate in RS-485 or Modbus RTU or Modbus ASCII or DNP 3.0 and KYZ output. Shall also be capable of optional I/O.

## Approximate Dimensions in Inches (mm)

## Notes

(1) 25 kAIC is available for single-phase connectors at 240 V .
(2) The short-circuit rating of the plug-in unit will match that of the busway that it is installed.
(3) Available in a duplex configuration.
(4) California standard receptacles.

For other receptacle options, contact the factory.
$480 / 277 \mathrm{~V}$ receptacles may be applied at $400 / 230 \mathrm{~V}$.

## 100 A Busway

## Product Description

## Product Selection

## Plug-In Busway

- 100 A copper
- Straight sections of plug-in busway
- Three-phase, three-wire; three-phase, four-wire; and single-phase, three-wire applications

## Application Description

Eaton 100 A busway is an alternative to cable in supplying small blocks of power for the normal commercial and industrial power systems. 100 A busway is practical for small shops, laboratories, classrooms and light manufacturing.

## Options and Accessories

## 100A Busway Plug-In Units

Plug-in units for 100 A busway are available with or without overcurrent protection. All plugin units include a neutral stab and are suitable for threephase, three-wire, and threephase, four-wire applications.

The PINQP circuit breaker enclosures and the LCNQP and LCNFD receptacle enclosures are all suitable for single-phase, three-wire applications. Ground stabs are available for field installation.

## Fusible Units

Fusible units are available for 30, 60 and 100 A service for 240 or 600 V .

## Circuit Breaker Units

If you are using circuit breaker units, the load must be distributed evenly among $A, B$ and $C$ phases. To accomplish this, distribute the load evenly among single-, two- and three-pole breakers. Available are QUICKLAG ${ }^{\circledR}$ "HQP" circuit breaker units for 50A-240V maximum service, "EHD, FDB and FD" circuit breakers for 100 A to 600 V maximum service.

## External Handle

 Operating MechanismAn external operating mechanism is attached on top of the breaker switch for hookstick or chain operation. This is available for all circuit breakers.

## Receptacle Enclosures

The receptacle enclosures (loadcenters) include space for three breaker poles and provisions for one, two or three conventional, singlegang outlets, and blank covers to fill unused spaces. Include neutral stab. Do not include breakers, outlets or wiring.

The enclosure, circuit breaker (if required) and ground are ordered separately and shipped unassembled. If the unit is to be factory assembled, please indicate on the order, add 15\% to the total price, and allow additional time for shipment. For circuit breaker selection, see Page V2-T6-22.

## Technical Data and Specifications

Electrical conductors are silver-plated round copper rods. A 50\% internal ground bar is supplied as standard. Busway with ground will match existing busway without ground. The housing is formed from two channels of 20 -gauge steel riveted together in a solid assembly and painted ANSI 6.1.

Conductor joints are made by means of boltless pressure clips that require no assembly or adjustment by the installer. The busbars are firmly supported by molded insulators on the alternate side of the busway.

## Selling Policy (Supersedes Selling Policy 25-000, dated February 20, 2006)

## Terms and Conditions of Sale

The Terms and Conditions of Sale set forth herein, and any supplements which may be attached hereto, constitute the full and final expression of the contract for the sale of products or services (hereinafter referred to as Product(s) or Services by Eaton Corporation (hereinafter referred to as Seller) to the Buyer, and supersedes all prior quotations, purchase orders, correspondence or communications whether written or oral between the Seller and the Buyer. Notwithstanding any contrary language in the Buyer's purchase order, correspondence or other form of acknowledgment, Buyer shall be bound by these Terms and Conditions of Sale when it sends a purchase order or otherwise indicates acceptance of this contract, or when it accepts delivery from Seller of the Products or Services.

THE CONTRACT FOR SALE OF THE PRODUCTS OR SERVICES IS EXPRESSLY LIMITED TO THE TERMS AND CONDITIONS OF SALE STATED HEREIN. ANY ADDITIONAL OR DIFFERENT TERMS PROPOSED BY BUYER ARE REJECTED UNLESS EXPRESSLY AGREED TO IN WRITING BY SELLER. No contract shall exist except as herein provided.

## Complete Agreement

No amendment or modification hereto nor any statement, representation or warranty not contained herein shall be binding on the Seller unless made in writing by an authorized representative of the Seller. Prior dealings, usage of the trade or a course of performance shall not be relevant to determine the meaning of this contract even though the accepting or acquiescing party had knowledge of the nature of the performance and opportunity for objection.

## Quotations

Written quotations are valid for 30 days from its date unless otherwise stated in the quotation or terminated sooner by notice.

Verbal quotations, unless accepted, expire the same day they are made.
A complete signed order must be received by Seller within 20 calendar days of notification of award, otherwise the price and shipment will be subject to re-negotiation.

## Termination and Cancellation

Any order may be terminated by the Buyer only by written notice and upon payment of reasonable termination charges, including all costs plus profit.
Seller shall have the right to cancel any order at any time by written notice if Buyer breaches any of the terms hereof, becomes the subject of any proceeding under state or federal law for the relief of debtors, or otherwise becomes insolvent or bankrupt, generally does not pay its debts as they become due or makes an assignment for the benefit of creditors.

## Prices

All prices are subject to change without notice. In the event of a price change, the effective date of the change will be the date of the new price or discount sheet, letter or telegram. All quotations made or orders accepted after the effective date will be on the new basis. For existing orders, the price of the unshipped portion of an order will be the price in effect at time of shipment.

## Price Policy-Products and Services

When prices are quoted as firm for quoted shipment, they are firm provided the following conditions are met:

1. The order is released with complete engineering details.
2. Shipment of Products are made, and Services purchased are provided within the quoted lead time.
3. When drawings for approval are required for any Products, the drawings applicable to those Products must be returned within 30* calendar days from the date of the original mailing of the drawings by Seller. The return drawings must be released for manufacture and shipment and must be marked "APPROVED" or "APPROVED AS NOTED." Drawing re-submittals which are required for any other reason than to correct Seller errors will not extend the 30-day period.

* 60 days for orders through contractors to allow time for their review and approval before and after transmitting them to their customers.

If the Buyer initiates or in any way causes delays in shipment, provision of Services or return of approval drawings beyond the periods stated above, the price of the Products or Services will be increased $1 \%$ per month or fraction thereof up to a maximum of 18 months from the date of the Buyer's order. For delays resulting in shipment or provision of Services beyond 18 months from the date of the Buyer's order, the price must be renegotiated.

## Price Policy-BLS

Refer to Price Policy 25-050.

## Minimum Billing

Orders less than \$1,000 will be assessed a shipping and handling charge of $5 \%$ of the price of the order, with a minimum charge of $\$ 25.00$ unless noted differently on Product discount sheets.

## Taxes

The price does not include any taxes. Buyer shall be responsible for the payment of all taxes applicable to, or arising from the transaction, the Products, its sale, value, or use, or any Services performed in connection therewith regardless of the person or entity actually taxed.

## Terms of Payment

## Products

Acceptance of all orders is subject to the Buyer meeting Seller's credit requirements. Terms of payment are subject to change for failure to meet such requirements. Seller reserves the right at any time to demand full or partial payment before proceeding with a contract of sale as a result of changes in the financial condition of the Buyer. Terms of Payment are either Net 30 days from the date of invoice of each shipment or carry a cash discount based on Product type. Specific payment terms for Products are outlined in the applicable Product discount schedules.

## Services

Terms of payment are net within 30 days from date of invoice for orders amounting to less than $\$ 50,000.00$.

Terms of payment for orders exceeding $\$ 50,000.00$ shall be made according to the following:

1. Twenty percent $(20 \%)$ of order value with the purchase order payable 30 days from date of invoice.
2. Eighty percent $(80 \%)$ of order value in equal monthly payments over the performance period payable 30 days from date of invoice.

Except for work performed (i) under a firm fixed price basis or (ii) pursuant to terms of a previously priced existing contract between Seller and Buyer, invoices for work performed by Seller shall have added and noted on each invoice a charge of 3\% (over and above the price of the work) which is related to Seller compliance with present and proposed environmental, health, and safety regulations associated with prescribed requirements covering hazardous materials management and employee training, communications, personal protective equipment, documentation and record keeping associated therewith.

## Adequate Assurances

If, in the judgment of Seller, the financial condition of the Buyer, at any time during the period of the contract, does not justify the terms of payment specified, Seller may require full or partial payment in advance.

## Delayed Payment

If payments are not made in accordance with these terms, a service charge will, without prejudice to the right of Seller to immediate payment, be added in an amount equal to the lower of $1.5 \%$ per month or fraction thereof or the highest legal rate on the unpaid balance.

## Freight

Freight policy will be listed on the Product discount sheets, or at option of Seller one of the following freight terms will be quoted.

## F.O.B.-P/S—Frt./Ppd. and Invoiced

Products are sold F.O.B. point of shipment freight prepaid and invoiced to the Buyer.

## F.O.B.-P/S—Frt./Ppd. and Allowed

Products sold are delivered F.O.B. point of shipment, freight prepaid and included in the price.

## F.O.B. Destination-Frt./Ppd. and Allowed

At Buyer's option, Seller will deliver the Products F.O.B. destination freight prepaid and $2 \%$ will be added to the net price.
The term "freight prepaid" means that freight charges will be prepaid to the accessible common carrier delivery point nearest the destination for shipments within the United States and Puerto Rico unless noted differently on the Product discount sheets. For any other destination contact Seller's representative.

## Shipment and Routing

Seller shall select the point of origin of shipment, the method of transportation, the type of carrier equipment and the routing of the shipment.
If the Buyer specifies a special method of transportation, type of carrier equipment, routing, or delivery requirement, Buyer shall pay all special freight and handling charges.

When freight is included in the price, no allowance will be made in lieu of transportation if the Buyer accepts shipment at factory, warehouse, or freight station or otherwise supplies its own transportation.

## Risk of Loss

Risk of loss or damage to the Products shall pass to Buyer at the F.O.B. point.

## Concealed Damage

Except in the event of F.O.B destination shipments, Seller will not participate in any settlement of claims for concealed damage.

When shipment has been made on an F.O.B. destination basis, the Buyer must unpack immediately and, if damage is discovered must:

1. Not move the Products from the point of examination.
2. Retain shipping container and packing material.
3. Notify the carrier in writing of any apparent damage.
4. Notify Seller representative within 72 hours of delivery.
5. Send Seller a copy of the carrier's inspection report.

## Witness Tests/Customer Inspection

Standard factory tests may be witnessed by the Buyer at Seller's factory for an additional charge calculated at the rate of $\$ 2,500$ per day (not to exceed eight (8) hours) per Product type. Buyer may final inspect Products at the Seller's factory for $\$ 500$ per day per Product type.
Witness tests will add one (1) week to the scheduled shipping date. Seller will notify Buyer fourteen (14) calendar days prior to scheduled witness testing or inspection. In the event Buyer is unable to attend, the Parties shall mutually agree on a rescheduled date. However, Seller reserves the right to deem the witness tests waived with the right to ship and invoice Products.

## Held Orders

For any order held, delayed or rescheduled at the request of the Buyer, Seller may, at its sole option (1) require payment to be based on any reasonable basis, including but not limited to the contract price, and any additional expenses, or cost resulting from such a delay; (2) store Products at the sole cost and risk of loss of the Buyer; and/ or (3) charge to the Buyer those prices under the applicable price policy. Payment for such price, expenses and costs, in any such event, shall be due by Buyer within thirty (30) days from date of Seller's invoice. Any order so held delayed or rescheduled beyond six (6) months will be treated as a Buyer termination.

## Drawing Approval

Seller will design the Products in line with, in Seller's judgment, good commercial practice. If at drawing approval Buyer makes changes outside of the design as covered in their specifications, Seller will then be paid reasonable charges and allowed a commensurate delay in shipping date based on the changes made.

## Drawing Re-Submittal

When Seller agrees to do so in its quotation, Seller shall provide Buyer with the first set of factory customer approval drawing(s) at Seller's expense. The customer approval drawing(s) will be delivered at the quoted delivery date. If Buyer requests drawing changes or additions after the initial factory customer approval drawing(s) have been submitted by Seller, the Seller, at its option, may assess Buyer drawing charges. Factory customer approval drawing changes required due to misinterpretation by Seller will be at Seller's expense. Approval drawings generated by Bid Manager are excluded from this provision.

## Warranty

 Warranty for ProductsSeller warrants that the Products manufactured by it will conform to Seller's applicable specifications and be free from failure due to defects in workmanship and material for one (1) year from the date of installation of the Product or eighteen (18) months from the date of shipment of the Product, whichever occurs first.

In the event any Product fails to comply with the foregoing warranty Seller will, at its option, either (a) repair or replace the defective Product, or defective part or component thereof, F.O.B. Seller's facility freight prepaid, or (b) credit Buyer for the purchase price of the Product. All warranty claims shall be made in writing.

Seller requires all nonconforming Products be returned at Seller's expense for evaluation unless specifically stated otherwise in writing by Seller.

This warranty does not cover failure or damage due to storage, installation, operation or maintenance not in conformance with Seller's recommendations and industry standard practice or due to accident, misuse, abuse or negligence. This warranty does not cover reimbursement for labor, gaining access, removal, installation, temporary power or any other expenses, which may be incurred in connection with repair or replacement.
This warranty does not apply to equipment not manufactured by Seller. Seller limits itself to extending the same warranty it receives from the supplier.

Effective Date: November l, 2008

Extended Warranty for Products
If requested by the Buyer and specifically accepted in writing by Seller, the foregoing standard warranty for Products will be extended from the date of shipment for the period and price indicated below:

- 24 months- $2 \%$ of Contract Price
- 30 months- $3 \%$ of Contract Price
- 36 months- $4 \%$ of Contract Price

## Special Warranty (In and Out) for Products

If requested by the Buyer and specifically accepted in writing by Seller, Seller will, during the warranty period for Products, at an additional cost of $2 \%$ of the contract price, be responsible for the direct cost of:

1. Removing the Product from the installed location.
2. Transportation to the repair facility and return to the site.
3. Reinstallation on site.

The total liability of Seller for this Special Warranty for Products is limited to 50\% of the contract price of the particular Product being repaired and excludes expenses for removing adjacent apparatus, walls, piping, structures, temporary service, etc.

Warranty for Services
Seller warrants that the Services performed by it hereunder will be performed in accordance with generally accepted professional standards.

The Services, which do not so conform, shall be corrected by Seller upon notification in writing by the Buyer within one (1) year after completion of the Services.

Unless otherwise agreed to in writing by Seller, Seller assumes no responsibility with respect to the suitability of the Buyer's, or its customer's, equipment or with respect to any latent defects in equipment not supplied by Seller. This warranty does not cover damage to Buyer's, or its customer's, equipment, components or parts resulting in whole or in part from improper maintenance or operation or from their deteriorated condition. Buyer will, at its cost, provide Seller with unobstructed access to the defective Services, as well as adequate free working space in the immediate vicinity of the defective Services and such facilities and systems, including, without limitation, docks, cranes and utility disconnects and connects, as may be necessary in order that Seller may perform its warranty obligations. The conducting of any tests shall be mutually agreed upon and Seller shall be notified of, and may be present at, all tests that may be made.

## Warranty for Power Systems Studies

Seller warrants that any power systems studies performed by it will conform to generally accepted professional standards. Any portion of the study, which does not so conform, shall be corrected by Seller upon notification in writing by the Buyer within six (6) months after completion of the study. All warranty work shall be performed in a single shift straight time basis Monday through Friday. In the event that the study requires correction of warranty items on an overtime schedule,
the premium portion of such overtime shall be for the Buyer's account.

Limitation on Warranties for Products, Services and Power Systems Studies
THE FOREGOING WARRANTIES ARE EXCLUSIVE EXCEPT FOR WARRANTY OF TITLE. SELLER DISCLAIMS ALL OTHER WARRANTIES INCLUDING ANY IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.
CORRECTION OF NONCONFORMITIES IN THE MANNER AND FOR THE PERIOD OF TIME PROVIDED ABOVE SHALL CONSTITUTE SELLER'S SOLE LIABILITY AND BUYER'S EXCLUSIVE REMEDY FOR FAILURE OF SELLER TO MEET ITS WARRANTY OBLIGATIONS, WHETHER CLAIMS OF THE BUYER ARE BASED IN CONTRACT, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY), OR OTHERWISE.

## Asbestos

Federal Law requires that building or facility owners identify the presence, location and quantity of asbestos containing material (hereinafter "ACM") at work sites. Seller is not licensed to abate ACM. Accordingly, for any contract which includes the provision of Services, prior to (i) commencement of work at any site under a specific Purchase Order, (ii) a change in the work scope of any Purchase Order, the Buyer will certify that the work area associated with the Seller's scope of work includes the handling of Class II ACM, including but not limited to generator wedges and high temperature gaskets which include asbestos materials. The Buyer shall, at its expense, conduct abatement should the removal, handling, modification or reinstallation, or some or all of them, of said Class II ACM be likely to generate airborne asbestos fibers; and should such abatement affect the cost of or time of performance of the work then Seller shall be entitled to an equitable adjustment in the schedule, price and other pertinent affected provisions of the contract.

## Compliance with Nuclear Regulation

Seller's Products are sold as commercial grade Products not intended for application in facilities or activities licensed by the United States Nuclear Regulatory Commission for atomic purposes. Further certification will be required for use of the Products in any safety-related application in any nuclear facility licensed by the U.S. Nuclear
Regulatory Commission.

## Returning Products

Authorization and shipping instructions for the return of any Products must be obtained from Seller before returning the Products.

When return is occasioned due to Seller error, full credit including all transportation charges will be allowed.

## Product Notices

Buyer shall provide the user (including its employees) of the Products with all Seller supplied Product notices, warnings, instructions, recommendations, and similar materials.

## Force Majeure

Seller shall not be liable for failure to perform or delay in performance due to fire, flood, strike or other labor difficulty, act of God, act of any governmental authority or of the Buyer, riot, embargo, fuel or energy shortage, car shortage, wrecks or delays in transportation, or due to any other cause beyond Seller's reasonable control. In the event of delay in performance due to any such cause, the date of delivery or time for completion will be extended by a period of time reasonably necessary to overcome the effect of such delay.

## Liquidated Damages

Contracts which include liquidated damage clauses for failure to meet shipping or job completion promises are not acceptable or binding on Seller, unless such clauses are specifically accepted in writing by an authorized representative of the Seller at its headquarters office.

## Patent Infringement

Seller will defend or, at its option, settle any suit or proceeding brought against Buyer, or Buyer's customers, to the extent it is based upon a claim that any Product or part thereof, manufactured by Seller or its subsidiaries and furnished hereunder, infringes any United States patent, other than a claim of infringement based upon use of a Product or part thereof in a process, provided Seller is notified in reasonable time and given authority, information and assistance (at Seller's expense) for the defense of same. Seller shall pay all legal and court costs and expenses and courtassessed damages awarded therein against Buyer resulting from or incident to such suit or proceeding. In addition to the foregoing, if at any time Seller determines there is a substantial question of infringement of any United States patent, and the use of such Product is or may be enjoined, Seller may, at its option and expense: either (a) procure for Buyer the right to continue using and selling the Product; (b) replace the Product with non-infringing apparatus; (c) modify the Product so it becomes noninfringing; or (d) as a last resort, remove the Product and refund the purchase price, equitably adjusted for use and obsolescence. In no case does Seller agree to pay any recovery based upon its Buyer's savings or profit through use of Seller's Products whether the use be special or ordinary. The foregoing states the entire liability of Seller for patent infringement.

The preceding paragraph does not apply to any claim of infringement based upon: (a) any modification made to a Product other than by Seller; (b) any design and/or specifications of Buyer to which a Product was manufactured; or (c) the use or combination of Product with other products where the Product does not itself infringe. As to the aboveidentified claim situations where the preceding paragraph does not apply, Buyer shall defend and hold Seller harmless in the same manner and to the extent as Seller's obligations described in the preceding paragraph. Buyer shall be responsible for obtaining (at Buyer's expense) all license rights required for Seller to be able to use software products in the possession of Buyer where such use is required in order to perform any Service for Buyer.

With respect to a Product or part thereof not manufactured by Seller or its subsidiaries, Seller will attempt to obtain for Buyer, from the supplier(s), the patent indemnification protection normally provided by the supplier(s) to customers.

## Limitation of Liability

THE REMEDIES OF THE BUYER SET FORTH IN THIS CONTRACT ARE EXCLUSIVE AND ARE ITS SOLE
REMEDIES FOR ANY
FAILURE OF SELLER
TO COMPLY WITH ITS OBLIGATIONS HEREUNDER.
NOTWITHSTANDING ANY PROVISION IN THIS CONTRACT TO THE CONTRARY, IN NO EVENT SHALL SELLER BE LIABLE IN CONTRACT, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY) OR OTHERWISE FOR DAMAGE TO PROPERTY OR EQUIPMENT OTHER THAN PRODUCTS SOLD HEREUNDER, LOSS OF PROFITS OR REVENUE, LOSS OF USE OF PRODUCTS, COST OF CAPITAL, CLAIMS OF CUSTOMERS OF THE BUYER OR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES WHATSOEVER, REGARDLESS OF WHETHER SUCH POTENTIAL DAMAGES ARE FORESEEABLE OR IF SELLER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.
the total cumulative LIABILITY OF SELLER ARISING FROM OR RELATED TO THIS CONTRACT WHETHER THE CLAIMS ARE BASED IN CONTRACT, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY) OR OTHERWISE, SHALL NOT EXCEED THE PRICE OF THE PRODUCT OR SERVICES ON WHICH SUCH LIABILITY IS BASED.

[^0]:    These catalog pages do not purport to cover all details or variations in equipment, nor to provide for every possible contingency to be met in connection with installation, operation or maintenance. Should further information be desired or should particular problems arise which are not covered sufficiently for the purchaser's purposes, the matter should be referred to the local Eaton Products Distributor or Sales Office. The contents of this catalog shall not become part of or modify any prior or existing agreement, commitment or relationship. The sales contract contains the entire obligation of Eaton's Electrical Sector. The warranty contained in the contract between the parties is the sole warranty of Eaton. Any statements contained herein do not create new warranties or modify the existing warranty.

[^1]:    (1) Separate neutral kit required.
    (2) 600 V switch.

    Always verify the number of poles and wires required since catalog numbers may appear in multiple tables.

[^2]:    Notes
    (1) Accessories and modifications shown on Pages V2-T1-16 through V2-T1-19 are NOT applicable to NEMA 7/9 disconnect switches.
    ${ }^{(2)}$ Dual three- and four-point mounting available as standard on enclosures 1 and 2.

[^3]:    Notes
    (1) NEMA 12 enclosures (30-100A) can be field modified to meet NEMA 3R rainproof requirements when a factory provided drain hole is opened.
    (2) Contact the Safety Switch Flex Center (1-888-329-9272 or FlexSwitches@eaton.com) for availability of this product.

[^4]:    (1) Maximum wire size 500 kcmil .
    (2) Through-feed only.

[^5]:    Notes
    (1) For CSA listed switches, add prefix letter " $C$ " to the front of the catalog number.
    ${ }^{2}$ (3) NEMA Type 12 enclosures (16-80A) can be field modified to meet NEMA Type $3 R$ rainproof requirements when a factory-provided drain hole is opened.
    
    (4) cULus only.
    (5) Ordered and shipped as separate components-not integral to enclosed device.
    (6) Enclosed disconnects can accept one power pole, neutral or up to two auxiliary contacts (one mounted on either side of switch).

    Contact the Safety Switch Flex Center (1-888-329-9272 or FlexSwitches@eaton.com) for factory-installed accessories or other special modifications.

[^6]:    (1) Weights subject to change.

    For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton. Frame drawings/dimensions information begins on Page V2-T2-216.

[^7]:    (1) Weights subject to change.

    For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton. Frame drawings/dimensions information begins on Page V2-T2-216.

[^8]:    (1) Weights subject to change.

[^11]:    (1) Weights subject to change.

    For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton. Frame drawings/dimensions information begins on Page V2-T2-216.

[^12]:    (1) Contact Eaton.

    For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton. Frame drawings/dimensions information begins on Page V2-T2-216.

[^13]:    For other ratings or catalog numbers not shown, or for special enclosure types (including stainless steel), refer to Eaton. Frame drawings/dimensions information begins on Page V2-T2-216.

[^14]:    (1) Suitable for installation in onshore, onboard or offshore applications.
    (2) 1 at $+5 \%, 2$ at $-5 \%$ at 240 volts primary; 2 at $+2.5 \%, 4$ at $-2.5 \%$ at 480 volts primary.

    Frame drawings/dimensions information begins on Page V2-T2-216.

[^15]:    Notes
    (1) Suitable for installation in onshore, onboard or offshore applications.
    (2) Lighting tap limited to $5 \%$ of nameplate full load capacity.

    Frame drawings/dimensions information begins on Page V2-T2-216.

[^16]:    Frame drawings/dimensions information begins on Page V2-T2-216.

[^17]:    Frame drawings/dimensions information begins on Page V2-T2-216.

[^18]:    Frame drawings/dimensions information begins on Page V2-T2-216.

[^19]:    Frame drawings/dimensions information begins on Page V2-T2-216.

[^20]:    Frame drawings/dimensions information begins on Page V2-T2-216.

[^21]:    Frame drawings/dimensions information begins on Page V2-T2-216.

[^22]:    Frame drawings/dimensions information begins on Page V2-T2-216.

[^23]:    Frame drawings/dimensions information begins on Page V2-T2-216.

[^24]:    Frame drawings/dimensions information begins on Page V2-T2-216.

[^25]:    (1) Effective June 1, 2001, frame numbers will have a prefix of FR, e.g., FR819. Dimensions, accessories and so on are still applicable as if the FR did not exist.

    Parts listed are for standard catalog listed transformers. Units with modifications may require different parts. (Frame number from transformer nameplate required.) Transformer nameplate and UL label are not field replaceable.

[^26]:    Notes
    (1) Not valid with FDE.
    (2) Not valid with HFDE.

[^27]:    Notes
    (1) Not compatible with PRC750(E) controllers. Recommended for PRC1000(E), PRC1500(E) and PRC2000(E) controllers.
    (2) Contact factory for custom labeling.

[^28]:    Notes
    (1) 1600 A is dual drawout only and up to 480 V .
    (2) 0.025 seconds up through 200 A .

[^29]:    S = Standard, $0=$ Optional, $\mathrm{C}=$ Configurable

[^30]:    S = Standard, $0=$ Optional, $\mathrm{C}=$ Configurable

[^31]:    S = Standard, $0=$ Optional, $\mathrm{C}=$ Configurable
